Up to 1 year of free Google Cloud Certified - Professional Cloud Database Engineer (Professional-Cloud-Database-Engineer) questions updates are also available if in any case the sections of the Google Professional-Cloud-Database-Engineer Actual Test changes after your purchase. Lastly, we also offer a full refund guarantee according to terms and conditions if you do not get success in the Google Cloud Certified - Professional Cloud Database Engineer exam after using our Professional-Cloud-Database-Engineer product.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q57-Q62):

NEW QUESTION # 57

You are the DBA of an online tutoring application that runs on a Cloud SQL for PostgreSQL database. You are testing the implementation of the cross-regional failover configuration. The database in region R1 fails over successfully to region R2, and the database becomes available for the application to process data. During testing, certain scenarios of the application work as expected in region R2, but a few scenarios fail with database errors. The application-related database queries, when executed in isolation from Cloud SQL for PostgreSQL in region R2, work as expected. The application performs completely as expected when the database fails back to region R1. You need to identify the cause of the database errors in region R2. What should you do?

- **A. Determine whether the database patches of Cloud SQL for PostgreSQL in regions R1 and R2 are different.**
- B. Determine whether the versions of Cloud SQL for PostgreSQL in regions R1 and R2 are different.
- C. Determine whether the failover of Cloud SQL for PostgreSQL from region R1 to region R2 is in progress or has completed successfully.
- D. Determine whether Cloud SQL for PostgreSQL in region R2 is a near-real-time copy of region R1 but not an exact copy.

Answer: A

NEW QUESTION # 58

You work in the logistics department. Your data analysis team needs daily extracts from Cloud SQL for MySQL to train a machine learning model. The model will be used to optimize next-day routes. You need to export the data in CSV format. You want to follow Google-recommended practices. What should you do?

- A. Use Cloud Composer to orchestrate an export by calling the `cloudsql.instances.export` API.
- **B. Use Cloud Scheduler to trigger a Cloud Function that will run a `select * from table(s)` query to call the `cloudsql.instances.export` API.**
- C. Use Cloud Composer to execute a `select * from table(s)` query and export results.
- D. Use Cloud Scheduler to trigger a Cloud Function through Pub/Sub to call the `cloudsql.instances.export` API.

Answer: B

NEW QUESTION # 59

Your organization has an existing app that just went viral. The app uses a Cloud SQL for MySQL backend database that is experiencing slow disk performance while using hard disk drives (HDDs). You need to improve performance and reduce disk I/O wait times. What should you do?

- **A. Export the data from the existing instance, and import the data into a new instance with solid-state drives (SSDs).**
- B. Create a high availability (HA) failover instance with SSDs, and perform a failover to the new instance.
- C. Edit the instance to change the storage type from HDD to SSD.
- D. Create a read replica of the instance with SSDs, and perform a failover to the new instance.

Answer: A

Explanation:

NEW QUESTION # 60

Your company wants to move to Google Cloud. Your current data center is closing in six months. You are running a large, highly transactional Oracle application footprint on VMWare. You need to design a solution with minimal disruption to the current architecture and provide ease of migration to Google Cloud. What should you do?

- A. Migrate applications to Cloud SQL.
- B. Migrate applications and Oracle databases to Compute Engine.
- C. Migrate applications and Oracle databases to Google Kubernetes Engine (GKE).
- **D. Migrate applications and Oracle databases to Google Cloud VMware Engine (VMware Engine).**

Answer: D
