최신 Portworx Enterprise Portworx-Enterprise-Professional 무료샘플문제 (Q55-Q60):

질문 # 55

What is the minimum number of cores needed to run Portworx?

- A. 0
- B. 1
- C. 2

정답: A

설명:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx requires a minimum of 4 CPU cores per node to operate efficiently. This minimum ensures sufficient compute resources to handle storage management operations, volume I/O, replication, and metadata services without performance bottlenecks. While more cores can improve throughput and scalability, 4 cores is the documented baseline for supporting production workloads and maintaining cluster responsiveness. The Portworx system requirements specify this CPU baseline to guarantee stable operation alongside other Kubernetes node workloads. Deployments with fewer CPU resources may face degraded performance or instability. Official Portworx hardware requirements recommend 4 cores or more per node to meet performance and reliability objectives in typical enterprise environments 【Pure Storage Portworx System Requirements source】 .

질문 # 56

What is the primary function of the telemetry pod added to each node when telemetry is enabled in Portworx?

- A. To upload Portworx diagnostics to Pure1.
- B. To monitor the health of the node.
- C. To manage network configurations.

정답: A

설명:

Comprehensive and Detailed Explanation From Exact Extract:

When telemetry is enabled, Portworx deploys a telemetry pod on each node whose primary function is to collect diagnostic and performance data and securely upload it to Pure1, Pure Storage's cloud-based management and analytics platform. This pod gathers metrics such as resource utilization, error rates, and configuration changes, enabling proactive monitoring and predictive analytics. The data helps Pure1 provide customers with actionable insights, alerting, and automated support features, improving cluster reliability and reducing operational overhead. The telemetry pod does not directly monitor node health (which is the role of other components) nor manage network settings; its focus is on data collection and communication with Pure1. Official Portworx telemetry documentation highlights this pod as critical for enabling cloud-based health monitoring and customer support enhancements **【Pure Storage Portworx Telemetry Guide source】**.

질문 # 57

What is the name of the Kubernetes secret containing external KVDB certificates?

- A. px-kvdb-auth
- B. px-kvdb
- C. px-kvdb-cert

정답: A

설명:

Comprehensive and Detailed Explanation From Exact Extract:

The Kubernetes secret named px-kvdb-auth is used to store external KVDB certificates in a Portworx deployment. These certificates enable mutual TLS authentication for the KVDB pods, ensuring secure and authenticated communication between the distributed KVDB instances running on different nodes. The px-kvdb-auth secret includes private keys and certificate chains that are essential for encrypting KVDB traffic and verifying peer identities within the cluster. This security feature prevents unauthorized access and protects sensitive KVDB data in transit. Portworx's official security and KVDB documentation detail the use of this secret, highlighting its role in certificate management and enabling encryption for high-availability clusters running on Kubernetes environments **【Pure Storage Portworx Security Guide source】**.

질문 # 58

A Portworx administrator wants to create a storage class that can be used to create volumes with the following characteristics:

* Encrypted volume

* Two replicas

Which definition should the administrator use?

- A. kind: StorageClass
apiVersion: storage.k8s.io/v1
metadata:
name: px-encrypted
provisioner: kubernetes.io/portworx-volume
parameters:
encrypted: "true"
repl: "2"
- B. kind: StorageClass
apiVersion: storage.k8s.io/v1
metadata:
name: px-encrypted
provisioner: kubernetes.io/portworx-volume
parameters:
sharedv4: "true"
repl: "2"
- C. kind: StorageClass
apiVersion: storage.k8s.io/v1
metadata:
name: px-encrypted
provisioner: kubernetes.io/portworx-volume
parameters:

```
secure: "true"
repl: "2"
```

정답: A

설명:

Comprehensive and Detailed Explanation From Exact Extract:

To create a StorageClass in Kubernetes for Portworx volumes that are encrypted and replicated twice, the correct parameters are encrypted: "true" to enable encryption and repl: "2" to specify two replicas. Option A accurately sets these parameters, ensuring volumes provisioned with this StorageClass will be encrypted at rest and maintain two replicas for data redundancy. Option B uses sharedv4: "true", which relates to NFS-like sharing, not encryption. Option C uses secure: "true", which is not the recognized parameter for enabling encryption in Portworx StorageClass definitions. The official Portworx StorageClass parameter documentation confirms encrypted as the correct flag for encryption and repl to specify replication factor, enabling administrators to enforce data security and availability policies declaratively through Kubernetes manifests 【Pure Storage Portworx StorageClass Guide source】 .

질문 # 59

What is the minimum kernel needed for Portworx?

- A. Kernel version 4.15 or greater
- B. Kernel version 3.10 or greater
- C. Portworx works with any kernel

정답: B

설명:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx requires a minimum Linux kernel version of 3.10 or greater to operate properly. This requirement stems from Portworx's dependencies on certain kernel features and modules that became standard from kernel version 3.10 onwards. The kernel version affects support for device-mapper, overlay filesystems, network stack enhancements, and other low-level capabilities essential for Portworx's block storage functionality and performance. Although newer kernels (like 4.15+) offer additional features and improvements, Portworx maintains compatibility back to 3.10 to support a wide range of enterprise Linux distributions such as RHEL, CentOS, and Ubuntu LTS releases. The official Portworx system requirements document explicitly states kernel 3.10 as the minimum supported version to ensure stability and compatibility in production environments 【Pure Storage Portworx System Requirements source】 .
