Free download Linux Essentials Certificate Exam - version 1.6 exam study material & Lpi 010-160 instant download dumps

Our 010-160 exam questions are high quality and efficiency test tools. The knowledge in our Linux Essentials Certificate Exam - version 1.6 torrent prep is very comprehensive because our experts in various fields will also update dates in time to ensure quality, you can get latest materials within one year after you purchase. What's more, you can learn our 010-160 Test Guide whether you are at home or outside. Based on the concept of service and in order to help every study succeed, we have a good reputation and security system to protect our customer's information.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q65-Q70):

NEW QUESTION # 65

Which of the following tasks can the command passwd accomplish? (Choose two.)

- A. Create a new user group.

- B. Lock a user account.
- C. Change a user's username.
- D. Create a new user account.
- E. Change a user's password.

Answer: B,E

Explanation:

The `passwd` command in Linux is used to change the password of a user account. A normal user can run `passwd` to change their own password, and a system administrator (the superuser) can use `passwd` to change another user's password, or define how that account's password can be used or changed¹. The `passwd` command can also be used to lock or unlock a user account. Locking a user account means disabling the user's ability to log in to the system, while unlocking a user account means restoring the user's ability to log in. To lock a user account, the `passwd` command can be used with the `-l` option, followed by the username. To unlock a user account, the `passwd` command can be used with the `-u` option, followed by the username². The `passwd` command cannot be used to change a user's username, create a new user account, or create a new user group. These tasks require different commands, such as `usermod`, `useradd`, or `groupadd`^{3,4,5}. NEW QUESTION # 66

Which of the following characters in a shell prompt indicates the shell is running with root privileges?

- A. !
- B. *
- C. &
- D. \$
- E. #

Answer: E

Explanation:

The shell prompt is a symbol or a string of characters that indicates the shell is ready to accept commands. The shell prompt can be customized by the user or by the system administrator. The default shell prompt for a normal user is usually a dollar sign (\$), while the default shell prompt for the root user is usually a hash sign (#). The root user is the superuser or the administrator of the system, who has full access and control over all files, commands, and resources. Running commands as root can be dangerous, as it can cause irreversible damage to the system if done incorrectly. Therefore, it is advisable to use `sudo` or `su` to run commands as root only when necessary, and to switch back to a normal user as soon as possible. The shell prompt indicates the shell is running with root privileges when it ends with a hash sign (#). NEW QUESTION # 67

What is true about the owner of a file?

- A. The owner of a file cannot be changed once it is assigned to an owner.
- B. The user owning a file must be a member of the file's group.
- C. Each file is owned by exactly one user and one group.
- D. When a user is deleted, all files owned by the user disappear.
- E. The owner of a file always has full permissions when accessing the file.

Answer: C

NEW QUESTION # 68

Which of the following commands puts the lines of the file `data.csv` into alphabetical order?

- A. `sort data.csv`
- B. `abc data.csv`
- C. `a..z data.csv`

- D. `wc -s data.csv`
- E. `grep --sort data.csv`

Answer: A

Explanation:

Explanation

The sort command is used to sort the lines of a file or a stream of input according to a specified criterion, such as alphabetical order, numerical order, reverse order, etc. By default, the sort command sorts the lines in ascending alphabetical order, using the first character of each line as the key. For example, the command `sort data.csv` will sort the lines of the file `data.csv` in alphabetical order and display the output on the screen. If you want to save the sorted output to a new file, you can use the redirection operator (`>`) to specify the output file name. For example, the command `sort data.csv > sorted_data.csv` will sort the lines of the file `data.csv` in alphabetical order and save the output to a new file named `sorted_data.csv`. The other commands are either invalid or do not perform the sorting operation. The `a..z` command does not exist, the `abc` command is a text editor, the `wc` command counts the number of words, lines, and bytes in a file, and the `grep` command searches for a pattern in a file or a stream of input. Therefore, the correct answer is B. References:

NEW QUESTION # 69

Which of the following devices represents a hard disk partition?

- A. `/dev/sda/p2`
- B. `/dev/sda2`
- C. `/dev/ttyS0`
- D. `/dev/sata0`
- E. `/dev/part0`

Answer: B

NEW QUESTION # 70

.....

Once you have decided to purchase our 010-160 study materials, you can add it to your cart. Then just click to buy and pay for the certain money. When the interface displays that you have successfully paid for our 010-160 study materials, our specific online sales workers will soon deal with your orders. You will receive the 010-160 study materials no later than ten minutes. You need to ensure that you have written down the correct email address. Please check it carefully. If you need the invoice, please contact our online workers. They will send you an electronic invoice, which is convenient. You can download the electronic invoice of the 010-160 Study Materials and reserve it.
