

# Free PDF Quiz 2026 ServiceNow CIS-PA Latest Test Dumps

DOWNLOAD the newest BraindumpsPrep CIS-PA PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=15B5hB3WKK9wkuz6q3odZI2YjGbnvI9PI>

Without a doubt, there is one thing that can assist them with perceiving this interest and clearing their Certified Implementation Specialist - Platform Analytics (CIS-PA) exam with flying colors. ServiceNow CIS-PA dumps merge all that gigantic and the competitor doesn't require to purchase the aide or different books to review. They have this test material and need nothing else for planning Certified Implementation Specialist - Platform Analytics exam.

There are many ways to help you pass ServiceNow certification CIS-PA exam and selecting a good pathway is a good protection. BraindumpsPrep can provide you a good training tool and high-quality reference information for you to participate in the ServiceNow certification CIS-PA exam. BraindumpsPrep's practice questions and answers are based on the research of ServiceNow certification CIS-PA examination Outline. Therefore, the high quality and high authoritative information provided by BraindumpsPrep can definitely do our best to help you pass ServiceNow certification CIS-PA exam. BraindumpsPrep will continue to update the information about ServiceNow certification CIS-PA exam to meet your need.

## Pass Guaranteed Quiz ServiceNow - Professional CIS-PA - Test Certified Implementation Specialist - Platform Analytics Dumps

Our CIS-PA exam questions are your optimum choices which contain essential know-hows for your information. So even trifling mistakes can be solved by using our CIS-PA practice engine, as well as all careless mistakes you may make. If you opt for these CIS-PA Study Materials, it will be a shear investment. You will get striking by these viable ways. If you visit our website, you will find that numerous of our customers have been benefited by our CIS-PA preparation prep.

### ServiceNow CIS-PA Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> <li>• <b>Data Collection:</b> This domain explains how Performance Analytics gathers and processes data, including collection flow, configuration properties, and troubleshooting collection issues.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Administration and Solutions:</b> This domain covers administrative tasks using the Admin Console and accelerating deployment with pre-built Content Packs.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Data Visualization:</b> This section focuses on presenting data through widgets, interactive filters, appropriate visualizations, dashboards, and analyzing data using Analytics Hub and KPI Details.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Perform Diagnostics and Troubleshooting</b></li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Architecture and Deployment:</b> This domain covers the foundational components of the Performance Analytics solution and the proper deployment sequence in ServiceNow environments.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• This section addresses identifying and resolving issues using Spotlight diagnostic tools to monitor system health and performance.</li> </ul>

## ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q13-Q18):

### NEW QUESTION # 13

A filtered Time Series widget shows individual trends for the number of open incidents with High and Critical priorities. Which action configures the Responsive Canvas Dashboard to show a combined trend for the Critical and High-priority incidents?

- A. Apply an elements filter to return High and Critical incidents only
- B. Check Manual elements and add widget elements for the High and Critical incidents
- **C. Set the Show multiple elements as property to Aggregate**
- D. Set the Show multiple elements as property to Separate

**Answer: C**

Explanation:

In Responsive Canvas dashboards, when a Time Series widget contains multiple elements, the Show multiple elements as property controls how those elements are visualized. Setting this property to Aggregate combines the values of all returned elements into a single trend line, which is exactly the desired outcome when viewing a combined trend for High and Critical priority incidents. Applying an elements filter (option D) limits which elements are displayed but does not combine them into one trend. Setting the property to Separate (option C) explicitly shows individual trend lines for each element. Manually adding elements (option B) still results in multiple distinct series unless aggregation is enabled. According to ServiceNow Platform Analytics documentation, aggregation is the correct method for consolidating multiple indicator elements into one unified visualization on a dashboard.

### NEW QUESTION # 14

What is the purpose of using a Bucket Group?

- **A. To categorize a large number of breakdown values into a few groupings**
- B. To manage API integrations for real-time data processing
- C. To create detailed logs of all incidents and changes
- D. To automate user role assignments

**Answer: A**

Explanation:

A Bucket Group in Platform Analytics is used to group large sets of numeric or time-based values into a smaller, more meaningful number of ranges. Common examples include grouping ages into ranges (0-5 days, 6-10 days), durations into bands, or hours of the day into segments. This simplifies analysis and improves dashboard readability by reducing excessive breakdown elements. Bucket Groups do not log incidents, manage roles, or control integrations. Instead, they support analytics by enabling structured classification of non-categorical data. ServiceNow documentation clearly positions Bucket Groups as a mechanism for transforming

raw numeric or duration data into consumable breakdowns, making option B the correct answer.

#### NEW QUESTION # 15

Which configuration confirms that an Automated Breakdown is using a Bucket Group?

- A. The Related list conditions of the Breakdown Source identify the Bucket Groups
- B. The Facts table of the Breakdown is set to [pa\_buckets]
- **C. The Facts table of the Breakdown Source is set to [pa\_buckets]**
- D. The Default elements filter of the Breakdown specifies the Bucket Groups

**Answer: C**

Explanation:

An Automated Breakdown is confirmed to be using a Bucket Group when the Facts table of the Breakdown Source is set to Bucket [pa\_buckets]. Bucket Groups define how numeric or duration values are grouped, but the actual bucketed analytics data is stored in the pa\_bucketstable during data collection.

The Breakdown Source is responsible for defining where the breakdown facts originate. If its Facts table is pa\_buckets, this indicates that the breakdown is based on bucketed values generated by a Bucket Group. The Breakdown record itself does not define the facts table, and default element filters or related list conditions do not establish the use of bucket data.

ServiceNow Platform Analytics documentation clearly states that all bucket-based breakdowns must reference pa\_buckets at the Breakdown Source level, making option C the correct and definitive answer.

#### NEW QUESTION # 16

What does the "Allow formula component to be NULL" setting for a Formula Indicator do?

- **A. It allows components to be NULL without aborting the formula**
- B. It skips the formula calculation if any component is NULL
- C. It always returns zero if any component is NULL
- D. It converts NULL values to zero

**Answer: A**

Explanation:

The Allow formula component to be NULL setting controls how a Formula Indicator behaves when one or more component indicators return NULL values. When enabled, the formula continues to calculate using the available components instead of aborting the calculation.

If this setting is disabled and any component returns NULL, the entire formula result becomes NULL. The setting does not automatically convert NULLs to zero, nor does it skip calculation entirely. ServiceNow documentation explains that this option provides flexibility in environments where some component indicators may not have data for every period, ensuring the formula can still produce meaningful results.

Therefore, option D accurately describes the behavior.

#### NEW QUESTION # 17

What is the default aggregation for the Metric tile in a Data Visualization?

- A. AVERAGE
- B. SUM
- C. MIN
- **D. COUNT**

**Answer: D**

Explanation:

In Platform Analytics data visualizations, the Metric tile is designed to display a single summarized value. By default, the aggregation used for a Metric tile is COUNT. This means the tile displays the total number of records or scores returned by the data source unless the aggregation is explicitly changed by the user.

COUNT is the most commonly used aggregation because Metric tiles are often used to show key headline numbers such as total incidents, open requests, or completed tasks. Other aggregations like AVERAGE, MIN, or SUM are available options, but they

must be manually selected during configuration. ServiceNow documentation confirms that COUNT is the default aggregation applied to Metric visualizations, making option A the correct answer.

## NEW QUESTION # 18

.....

This format of ServiceNow CIS-PA exam preparation material is compatible with smartphones and tablets, providing you with the convenience and flexibility to study on the go, wherever you are. Our CIS-PA PDF questions format is portable, allowing you to study anywhere, anytime, without worrying about internet connectivity issues or needing access to a desktop computer. Actual ServiceNow CIS-PA Questions in the ServiceNow CIS-PA PDF are printable, enabling you to study via hard copy.
