### NEW QUESTION # 39

Users receive an "Apex CPU limit exceeded" error when running the Advertising Sales Management (ASM) flow OmniScript in a Salesforce Experience site. The OmniScript includes an Integration Procedure that contains multiple Data Raptors.

In which two areas within OmniStudio should a Consultant check to troubleshoot this issue?

- D. DataRaptor Configuration

**Answer: A,B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To troubleshoot Apex CPU limit errors in OmniStudio, checking the OmniScript Debugger helps identify heavy operations in the flow. **NEW QUESTION # 40**

A publishing company has an existing media plan creation process that was setup using OmniStudio a few months ago. A new requirement has come up where the user will be required to enter a new secondary budget field and this field should be stored with the rest of the media plan details.

On which object should a Consultant add this field so that it is stored with the rest of the media plan and can be added to the appropriate OmniScript?

- A. Quote
- **B. Media Plan Placement**
- C. Opportunity
- D. Order

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The Media Plan Placement object holds detailed line-item level data related to media plans, including budgets and schedules. Adding the new secondary budget field here allows it to be managed alongside other media plan details and be exposed in OmniScripts that drive the media plan creation process. Opportunity, Order, and Quote objects do not store placement-level budget fields.
