

Quiz 2026 SPLK-2002: Splunk Enterprise Certified Architect–Professional Valid Braindumps Questions

What's more, part of that RealValidExam SPLK-2002 dumps now are free: https://drive.google.com/open?id=1_7-oqft0IOZUhUbln-tfHb1xqKH45uy

The objective of the RealValidExam is to give you quick access to Splunk Enterprise Certified Architect (SPLK-2002) actual questions. Offering Splunk SPLK-2002 updated dumps is the only factor behind the dominance of RealValidExam in the market. Our customers will see our Splunk Enterprise Certified Architect (SPLK-2002) questions in the final certification test. We have a devoted team who puts in a lot of effort to keep the SPLK-2002 questions updated.

To prepare for the Splunk SPLK-2002 Exam, candidates can take Splunk's official training courses, which cover all the topics tested in the exam. SPLK-2002 courses include Splunk Enterprise Architecture, Splunk Enterprise Deployment, and Splunk Enterprise Administration. Candidates can also take practice exams and study guides available online to help them prepare for the exam.

Reliable SPLK-2002 Test Testking & SPLK-2002 Exam Cram

Those who are ambitious to obtain Splunk Enterprise Certified Architect certification mainly include office workers; they expect to reach a higher position and get handsome salary, moreover, a prosperous future. Through our SPLK-2002 test torrent, we expect to design such an efficient study plan to help you build a high efficient learning attitude for your further development. Our study materials are cater every candidate no matter you are a student or office worker, a green hand or a staff member of many years' experience, SPLK-2002 Certification Training is absolutely good choices for you. Therefore, you have no need to worry about whether you can pass the exam, because we guarantee you to succeed with our technology strength.

Splunk SPLK-2002 exam is designed to test the knowledge and skills of IT professionals in using Splunk Enterprise to analyze and manage large amounts of data. Splunk Enterprise Certified Architect certification is intended for individuals who have experience with Splunk and are looking to validate their expertise in using the platform to solve complex business problems. Passing SPLK-2002 Exam demonstrates a candidate's ability to design, deploy, and manage a Splunk environment at an expert level.

Splunk Enterprise Certified Architect Sample Questions (Q29-Q34):

NEW QUESTION # 29

An indexer cluster is being designed with the following characteristics:

- * 10 search peers
- * Replication Factor (RF): 4
- * Search Factor (SF): 3
- * No SmartStore usage

How many search peers can fail before data becomes unsearchable?

- A. Four peers can fail.

- B. Zero peers can fail.
- C. One peer can fail.
- **D. Three peers can fail.**

Answer: D

Explanation:

Three peers can fail. This is the maximum number of search peers that can fail before data becomes unsearchable in the indexer cluster with the given characteristics. The searchability of the data depends on the Search Factor, which is the number of searchable copies of each bucket that the cluster maintains across the set of peer nodes¹. In this case, the Search Factor is 3, which means that each bucket has three searchable copies distributed among the 10 search peers. If three or fewer search peers fail, the cluster can still serve the data from the remaining searchable copies. However, if four or more search peers fail, the cluster may lose some searchable copies and the data may become unsearchable. The other options are not correct, as they either underestimate or overestimate the number of search peers that can fail before data becomes unsearchable. Therefore, option C is the correct answer, and options A, B, and D are incorrect.

1: Configure the search factor

NEW QUESTION # 30

At which default interval does metrics.log generate a periodic report regarding license utilization?

- **A. 60 seconds**
- B. 10 seconds
- C. 300 seconds
- D. 30 seconds

Answer: A

Explanation:

The default interval at which metrics.log generates a periodic report regarding license utilization is 60 seconds.

This report contains information about the license usage and quota for each Splunk instance, as well as the license pool and stack. The report is generated every 60 seconds by default, but this interval can be changed by modifying the license_usage stanza in the metrics.conf file. The other intervals (10 seconds, 30 seconds, and 300 seconds) are not the default values, but they can be set by the administrator if needed. For more information, see About metrics.log and Configure metrics.log in the Splunk documentation.

NEW QUESTION # 31

Which Splunk Enterprise offering has its own license?

- A. Splunk Heavy Forwarder
- B. Splunk Cloud Forwarder
- C. Splunk Forwarder Management
- **D. Splunk Universal Forwarder**

Answer: D

Explanation:

Explanation/Reference: <https://docs.splunk.com/Spdexicon:Forwardinglicense>

NEW QUESTION # 32

Which server.conf attribute should be added to the master node's server.conf file when decommissioning a site in an indexer cluster?

- A. available_sites
- B. site_search_factor
- **C. site_mappings**
- D. site_replication_factor

Answer: C

Explanation:

Explanation

The `site_mappings` attribute should be added to the master node's `server.conf` file when decommissioning a site in an indexer cluster. The `site_mappings` attribute is used to specify how the master node should reassign the buckets from the decommissioned site to the remaining sites. The `site_mappings` attribute is a comma-separated list of site pairs, where the first site is the decommissioned site and the second site is the destination site. For example, `site_mappings = site1:site2,site3:site4` means that the buckets from site1 will be moved to site2, and the buckets from site3 will be moved to site4. The `available_sites` attribute is used to specify which sites are currently available in the cluster, and it is automatically updated by the master node. The `site_search_factor` and `site_replication_factor` attributes are used to specify the number of searchable and replicated copies of each bucket for each site, and they are not affected by the decommissioning process

NEW QUESTION # 33

Which Splunk tool offers a health check for administrators to evaluate the health of their Splunk deployment?

- A. DiagGen
- **B. Monitoring Console**
- C. btool
- D. SPL Clinic

Answer: B

Explanation:

The Monitoring Console is the Splunk tool that offers a health check for administrators to evaluate the health of their Splunk deployment. The Monitoring Console provides dashboards and alerts that show the status and performance of various Splunk components, such as indexers, search heads, forwarders, license usage, and search activity. The Monitoring Console can also run health checks on the deployment and identify any issues or recommendations. The `btool` is a command-line tool that shows the effective settings of the configuration files, but it does not offer a health check. The `DiagGen` is a tool that generates diagnostic snapshots of the Splunk environment, but it does not offer a health check. The `SPL Clinic` is a tool that analyzes and optimizes SPL queries, but it does not offer a health check. For more information, see [About the Monitoring Console in the Splunk documentation](#).
