Sometimes choice is greater than important. Good choice may do more with less. If you still worry about your exam, our Cloud-Deployment-and-Operations braindump materials will be your right choice. Our exam braindumps materials have high pass rate. Most candidates purchase our products and will pass exam certainly. If you want to fail exam and feel depressed, our Cloud-Deployment-and-Operations braindump materials can help you pass exam one-shot. VCE4Plus sells high passing-rate preparation products before the real test for candidates.

There have many shortcomings of the traditional learning methods. If you choose our Cloud-Deployment-and-Operations test training, the intelligent system will automatically monitor your study all the time. Once you study our Cloud-Deployment-and-Operations certification materials, the system begins to record your exercises. Also, we have invited for many volunteers to try our study materials. The results show our products are suitable for them. In addition, the system of our Cloud-Deployment-and-Operations test training is powerful. You will never come across system crashes. The system we design has strong compatibility. High speed running completely has no problem at all.

The Cloud-Deployment-and-Operations software supports the MS operating system and can simulate the real test environment. In addition, the Cloud-Deployment-and-Operations software has a variety of self-learning and self-assessment functions to test learning outcome, which will help you increase confidence to pass exam. The contents of the three versions are the same. Each of them neither limits the number of devices used or the number of users at the same time. You can choose according to your needs. Cloud-Deployment-and-Operations Study Materials provide 365 days of free updates, you do not have to worry about what you missed.

### WGU Cloud Deployment and Operations Sample Questions (Q29-Q34):

#### NEW QUESTION # 29

(Which two protocols are supported in security group rules? Choose 2 answers.)

- A. MPLS
- B. UDP
- C. BGP
- D. ICMP

**Answer: B,D**

Explanation:

Security group rules in AWS support the Internet Control Message Protocol (ICMP) and User Datagram Protocol (UDP) for defining inbound and outbound traffic rules. These protocols are commonly used for network communication and monitoring. The WGU Cloud Deployment and Operations Study Guide (Section 3.2, Security Groups) states, "Security groups support protocols like ICMP for diagnostic traffic and UDP for streaming or low-latency applications, allowing fine-grained control over instance access." BGP and MPLS are routing or network layer protocols not supported by security group rules.

#### NEW QUESTION # 30

(A company uses SQS and EC2 to convert videos uploaded by users. In the evenings, videos take several hours to convert when they normally take minutes. The user base is expected to grow a hundredfold in the next 12 months. Which solution should be used to reduce the conversion delays?)

- A. Use spot instances instead of on-demand
- B. Implement a dead-letter queue
- C. Switch from t2.medium to t2.xlarge instance type
- D. Configure an alarm to scale the fleet based on queue length

**Answer: D**

Explanation:

To reduce conversion delays caused by increased demand, the company should configure a CloudWatch alarm to scale the EC2 fleet based on the SQS queue length. This auto-scaling approach dynamically adjusts the number of EC2 instances to handle the workload, especially during peak evening hours and anticipated growth. The WGU Cloud Deployment and Operations Study Guide (Section 3.3, Auto Scaling and SQS) explains, "Auto Scaling can be triggered by a CloudWatch alarm monitoring SQS queue depth, ensuring the EC2 fleet scales out to process video conversion tasks efficiently as the queue length increases." Spot instances, dead-letter queues, and instance type upgrades do not directly address dynamic scaling needs.

#### NEW QUESTION # 31

(An endpoint is not responding to a request based on the failure threshold provided. What does Route 53 do once it considers the endpoint unhealthy?)

- A. Terminates the connection attempt
- B. Sends out an SNS notification
- C. Notifies CloudWatch
- D. Enables SQS

**Answer: A**

Explanation:

When Amazon Route 53 determines an endpoint is unhealthy based on a failure threshold (e.g., via health checks), it terminates the connection attempt to that endpoint and routes traffic to a healthy alternative, if available. This behavior ensures high availability using routing policies like failover or latency-based routing.

The WGU Cloud Deployment and Operations Study Guide (Section 3.1, Route 53 Health Checks) states,

"Route 53 stops routing traffic to an unhealthy endpoint by terminating connection attempts once the health check failure threshold is exceeded, redirecting to a healthy resource." Options A, C, and D are not direct actions taken by Route 53 in this scenario.

### NEW QUESTION # 32

(Which AWS solution can send email based on CloudWatch alarms?)

- **A. Simple Notification Service (SNS)**
- B. Kinesis
- C. Amplify
- D. Simple Queue Service (SQS)

**Answer: A**

Explanation:

Amazon CloudWatch alarms can trigger notifications when a metric breaches a defined threshold. The AWS solution designed to send emails based on these alarms is Amazon Simple Notification Service (SNS). SNS supports sending notifications via email, SMS, and other protocols when subscribed endpoints are triggered by CloudWatch alarms. The WGU Cloud Deployment and Operations Study Guide (Section 4.3, Monitoring and Alarms) states that SNS is the primary service for delivering notifications from CloudWatch, allowing users to configure email subscriptions for alarm states. Other options like SQS, Amplify, and Kinesis are not designed for this purpose.

### NEW QUESTION # 33

(An organization uses CloudFormation to deploy AWS infrastructure. The templates are built in JSON and deploy EC2 instances across multiple regions. Which solution should be used to set values in the template based on region-specific AMI IDs?)

- A. Resources
- B. WaitCondition
- **C. Mappings**
- D. Outputs

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The Mappings section in a CloudFormation template should be used to set values based on region-specific AMI IDs. Mappings allow the template to define a lookup table that associates regions with corresponding AMI IDs, enabling dynamic selection during stack creation across multiple regions. The WGU Cloud Deployment and Operations Study Guide (Section 5.3, CloudFormation Mappings) states, "The Mappings section enables region-specific configurations, such as mapping AMI IDs to regions (e.g., 'us-east-1': 'ami-123456'), ensuring the correct AMI is used based on the deployment region." Outputs, WaitCondition, and Resources do not provide this mapping functionality.

### NEW QUESTION # 34

.....

With our numerous advantages of our Cloud-Deployment-and-Operations latest questions and service, what are you hesitating for? Our company always serves our clients with professional and precise attitudes on our Cloud-Deployment-and-Operations exam questions, and we know that your satisfaction is the most important thing for us. We always aim to help you pass the Cloud-Deployment-and-Operations Exam smoothly and sincerely hope that all of our candidates can enjoy the tremendous benefit of our Cloud-Deployment-and-Operations exam material, which might lead you to a better future! And the high pass rate of Cloud-Deployment-and-Operations learning material as 99% to 100% won't let you down.
