Juniper JN0-232 Exam Practice Material in Three Diverse Versions

As you know the registration fee for the Security, Associate (JNCIA-SEC) (JN0-232) certification exam is itself very high, varying between 100\$ and 1000\$. And after paying the registration fee for better preparation a candidate needs budget-friendly and reliable Security, Associate (JNCIA-SEC) (JN0-232) pdf questions. That is why Prep4pass has compiled the most reliable updated Juniper JN0-232 Exam Questions with up to 1 year of free updates. The Juniper JN0-232 practice test can be used right after being bought by the customer and they can avail of the benefits given in the Security, Associate (JNCIA-SEC) (JN0-232) pdf questions.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q69-Q74):

NEW QUESTION # 69

Content filtering supports which two of the following protocols? (Choose two.)

- A. TFTP
- B. SNMP
- C. SMTP
- D. HTTP

Answer: C,D

Explanation:

Content filtering on SRX devices inspects and controls specific file types transferred across certain application protocols:

- * SMTP (Option A):Supported. Content filtering can block specific file attachments in emails.
- * HTTP (Option D):Supported. Content filtering can block downloads of specific file types over web traffic.
- * SNMP (Option B):Not supported; SNMP is a management protocol, not a content delivery protocol.
- * TFTP (Option C):Not supported by content filtering.

Correct Protocols:SMTP and HTTP

Reference:Juniper Networks -Content Security and Filtering Supported Protocols, Junos OS Security Fundamentals.

NEW QUESTION # 70

Which two statements are true about the NextGen Web Filtering (NGWF) feature on an SRX Series device?

(Choose two.)

- A. The NGWF feature consults your local lists before consulting the Juniper cloud.
- B. The NGWF feature requires a license.
- C. The NGWF feature does not require a license.
- D. The NGWF feature consults the Juniper cloud before consulting your local lists.

Answer: A,B

Explanation:

* License Requirement (Option B):NextGen Web Filtering (NGWF) is a licensed feature on SRX devices. Without a license, the service cannot operate.

* Local vs. Cloud Lists (Option C):NGWF checkslocal block/allow lists first. If the URL does not match locally, the request is then checked against the Juniper cloud database.

* Option A:Incorrect, since the cloud is only consulted if the URL is not in the local list.

* Option D:Incorrect, as NGWF requires a valid subscription/license.

Correct Statements:NGWF requires a license, and it checks local lists before cloud lookup.

Reference:Juniper Networks -UTM Web Filtering Types (NextGen Web Filtering), Junos OS Security Fundamentals.

NEW QUESTION # 71

Which statement about the flow module is correct in the context of destination NAT?

- A. The flow module performs NAT only for source IP addresses.
- B. The flow module performs NAT only during first path processing.
- C. The flow module performs NAT only during fast path processing.
- D. The flow module performs NAT during both first path and fast path processing.

Answer: D

Explanation:

The flow module on SRX Series Firewalls performs NAT translation - including both source and destination NAT - during both first path (session creation) and fast path (subsequent packets of an existing session) processing. This ensures consistency in address translation for all packets within a session.

NEW QUESTION # 72

What is the default timeout value for TCP sessions on an SRX Series device?

- A. 30 minutes
- B. 30 seconds
- C. 60 minutes

- D. 60 seconds

Answer: A

Explanation:

By default, TCP has a 30-minute idle timeout, and UDP has a 60-second idle timeout.

Additionally, known IP protocols have a 30-minute timeout, whereas unknown ones have a 60-second timeout. Setting the inactivity timeout is very useful, particularly if you are concerned about applications either timing out or remaining idle for too long and filling up the session table.

According to the Juniper SRX Series Services Guide, this can be configured using the 'timeout inactive' statement for the security policy.

NEW QUESTION # 73

Which two statements are correct about IPsec security associations? (Choose two.)

- A. IPsec security associations are established during IKE Phase 1 negotiations.
- **B. IPsec security associations are unidirectional.**
- C. IPsec security associations are bidirectional.
- **D. IPsec security associations are established during IKE Phase 2 negotiations.**

Answer: B,D

Explanation:

A security association (SA) is a unidirectional agreement between the VPN participants regarding the methods and parameters to use in securing a communication channel. Full bidirectional communication requires at least two SAs, one for each direction.

An IPsec tunnel consists of a pair of unidirectional SAs—one SA for each direction of the tunnel—that specify the security parameter index (SPI), destination IP address, and security protocol (Authentication Header [AH] or Encapsulating Security Payload [ESP]) employed.

NEW QUESTION # 74

.....

Contrary to the high prices of the other exam materials available online, our JN0-232 exam questions can be obtained on an affordable price yet their quality and benefits beat all similar products of our competitors. Some of our customer will be surprised to find that the price of our JN0-232 Study Guide is too low to believe for they had been charged a lot before on the other websites. But after they passed their exams with our JN0-232 preparation materials. They said that our JN0-232 simulating exam is proved the best alternative of the time and money.
