Juniper JN0-336 Practice Test - Latest Preparation Material [2026]

It is known to us that the error correction is very important for these people who are preparing for the JN0-336 exam in the review stage. It is very useful and helpful for a lot of people to learn from their mistakes, because many people will make mistakes in the same way, and it is very bad for these people to improve their accuracy. If you want to correct your mistakes when you are preparing for the JN0-336 Exam, the study materials from our company will be the best choice for you. Because our JN0-336 reference materials can help you correct your mistakes and keep after you to avoid the mistakes time and time again. We believe that if you buy the JN0-336 exam prep from our company, you will pass your exam in a relaxed state.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which two statements are true about the vSRX? (Choose two.)

- A. It does not have VMXNET3 vNIC support.

- B. It has VMXNET3 vNIC support.
- C. UNIX is the base OS.
- D. Linux is the base OS.

Answer: B,D

NEW QUESTION # 49

You are currently using a third-party threat analyzer. You want your SRX Series device to send decrypted SSE traffic to..... In this scenario, which feature should you configure on the SRX device?

- A. Phase 2 proxy ID
- B. JSA vulnerability assessment
- C. SSL decryption mirroring
- D. IPS IPanotify action

Answer: B,D

NEW QUESTION # 50

After JSA receives external events and flows, which two steps occur? (Choose two.)

- A. After formatting the data, the data is stored in an asset database.
- B. Before formatting the data, the data is analyzed for relevant information.
- C. After the information is filtered, JSA responds with active measures
- D. Before the information is filtered, the information is formatted

Answer: A,D

Explanation:

When JSA (Juniper Secure Analytics) receives external events and flows, the typical processing steps are:

Option C. Before the information is filtered, the information is formatted.

Data formatting is an initial step in the process where raw data from events and flows is converted into a standard format that can be more easily processed and analyzed by JSA.

Option A. After formatting the data, the data is stored in an asset database.

Once the data is formatted, it is stored in an asset database. This database acts as a repository for all the formatted data, enabling JSA to perform further analysis, correlation, and eventually, to maintain a comprehensive view of the network assets and activities. These steps are part of JSA's comprehensive approach to security event management, which involves collecting, normalizing, and analyzing data to identify potential security threats and vulnerabilities efficiently.

NEW QUESTION # 51

You are implementing an SRX Series device at a branch office that has low bandwidth and also uses a cloud-based VoIP solution with an outbound policy that permits all traffic.

Which service would you implement at your edge device to prioritize VoIP traffic in this scenario?

- A. AppFW
- B. AppQoS
- C. SIP ALG
- D. AppQoS

Answer: D

Explanation:

The service that you would implement at your edge device to prioritize VoIP traffic in this scenario is AppQoS. AppQoS is a feature that enables you to allocate bandwidth and prioritize traffic based on application signatures or custom rules. AppQoS can enhance the quality of service and experience for critical or latency-sensitive applications, such as VoIP. You can configure AppQoS policies to assign different classes of service (CoS) values or queue numbers to different applications or traffic flows. You can also define bandwidth limits, guarantees, or bursts for each class or queue. Reference: =

[Application Quality of Service Overview], [Configuring Application Quality of Service]

NEW QUESTION # 52

Which two statements about SRX Series device chassis clusters are true? (Choose two.)

- A. Redundancy group 0 is only active on the cluster backup node.
- **B. Chassis cluster member devices must be the same model.**
- C. Each chassis cluster member requires a unique cluster ID value.
- **D. Each chassis cluster member device can host active redundancy groups**

Answer: B,D

Explanation:

In a chassis cluster, both nodes can host active redundancy groups. The active redundancy groups can be distributed between the two nodes, depending on the configuration and failover status, allowing each node to handle traffic for different sets of services or interfaces.

For the chassis clustering to function correctly, both nodes in the cluster must be of the same model.

This requirement ensures that the hardware capabilities, such as processing power and interface compatibility, are identical, which is crucial for maintaining consistent performance and behavior between cluster nodes.

NEW QUESTION # 53

.....

Our clients come from all around the world and our company sends the products to them quickly. The clients only need to choose the version of the product, fill in the correct mails and pay for our JN0-336 study materials. Then they will receive our mails in 5-10 minutes. Once the clients click on the links they can use our JN0-336 Study Materials immediately. If the clients can't receive the mails they can contact our online customer service and they will help them solve the problem. Finally the clients will receive the mails successfully. The purchase procedures are simple and the delivery of our JN0-336 study materials is fast.
