High Hit Rate Juniper JN0-336 Certification Dumps - JN0-336 Free Download

The Security, Specialist (JNCIS-SEC) (JN0-336) practice test questions are customizable which means that the customers can customize the time and JN0-336 exam questions types according to their needs. These Juniper JN0-336 Practice Tests are based on real based examination scenarios which help the students practice under real JN0-336 exam questions pressure and learn to control it.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q34-Q39):

NEW QUESTION # 34
Which two statements are correct about security policy changes when using the policy rematch feature? (Choose two.)

- A. When a policy change includes changing the policy's action from permit to deny, all existing sessions are dropped.
- B. When a policy change includes changing the policy's source or destination address match condition, all existing sessions are reevaluated.
- C. When a policy change includes changing the policy's source or destination address match condition, all existing sessions are dropped.
- D. When a policy change includes changing the policy's action from permit to deny, all existing sessions are maintained

Answer: A,B

Explanation:
policy rematch is a feature that enables the device to reevaluate an active session when its associated security policy is modified. The

session remains open if it still matches the policy that allowed the session initially. The session is closed if its associated policy is renamed, deactivated, or deleted1.

NEW QUESTION # 35
Which two statements are correct about JSA data collection? (Choose two.)

- A. The Event Collector collects information using BGP FlowSpec.
- B. The Flow Collector parses logs.
- C. The Event Collector parses logs
- D. The Flow Collector can use statistical sampling

Answer: C,D

Explanation:
The Flow Collector can use statistical sampling to collect and store network flow data in the JSA database. The Event Collector collects information from various sources including syslog, SNMP, NetFlow, and BGP FlowSpec. Both the Flow Collector and the Event Collector parse logs to extract useful information from the logs.

NEW QUESTION # 36
When a security policy is deleted, which statement is correct about the default behavior of active sessions allowed by that policy?

- A. The active sessions allowed by the policy will be dropped.
- B. The active sessions allowed by the policy will be marked as a legacy flow and will continue to be forwarded.
- C. The active sessions allowed by the policy will be reevaluated by the cached
- D. The active sessions allowed by the policy will continue

Answer: B

Explanation:
When a security policy is deleted, the existing sessions that were previously allowed by that policy are not immediately dropped; instead, they are typically treated as legacy flows. This means they are allowed to continue until they naturally end or until the session timeout is reached. This behavior ensures that deleting a policy does not abruptly disrupt ongoing traffic flows that were previously authorized by that policy. This approach helps in avoiding unintended service disruptions, especially in production environments where active connections may be critical to operations.

NEW QUESTION # 37
Which two statements about SRX Series device chassis clusters are true? (Choose two.)

- A. Chassis cluster member devices must be the same model.
- B. Each chassis cluster member requires a unique cluster ID value.
- C. Redundancy group 0 is only active on the cluster backup node.
- D. Each chassis cluster member device can host active redundancy groups

Answer: A,D

Explanation:
In a chassis cluster, both nodes can host active redundancy groups. The active redundancy groups can be distributed between the two nodes, depending on the configuration and failover status, allowing each node to handle traffic for different sets of services or interfaces.
For the chassis clustering to function correctly, both nodes in the cluster must be of the same model.
This requirement ensures that the hardware capabilities, such as processing power and interface compatibility, are identical, which is crucial for maintaining consistent performance and behavior between cluster nodes.

NEW QUESTION # 38
You want to be alerted if the wrong password is used more than three times on a single device within five minutes.
Which Juniper Networks solution will accomplish this task?

- A. Juniper Secure Analytics
- B. Juniper Identity Management Service
- C. Intrusion Prevention System
- D. Adaptive Threat Profiling

Answer: A

Explanation:
The Juniper Networks solution that will accomplish the task of alerting if the wrong password is used more than three times on a single device within five minutes is Juniper Secure Analytics (JSA). JSA is a security intelligence platform that collects, analyzes, and correlates network data from various sources, such as firewalls, routers, switches, servers, and applications. JSA can detect and respond to threats, anomalies, and vulnerabilities in real time using rules, offenses, reports, and dashboards. JSA can also integrate with JIMS (Juniper Identity Management Service) to obtain user identity information from Active Directory domains or syslog sources. JSA can use this information to create custom rules that trigger offenses or alerts based on user behavior or activity, such as failed login attempts or password changes.
