6V0-22.25トレーニングサンプル、6V0-22.25試験復習

長年の努力と革新とクライアントベースのコンセプトを中心に、当社は業界の旗艦企業に成長しました。当社は、6V0-22.25試験の準備の質の向上に苦勞し、6V0-22.25スタディガイドの研究と革新に多大な努力とお金を投資しています。業界での当社のブランド名は、優れた6V0-22.25学習ガイドで有名です。高品質、思いやりのあるサービス、絶え間ない革新、そして6V0-22.25試験問題での最初の顧客の概念は、当社の4つの柱です。

VMware Avi Load Balancer 30.x Administrator 認定 6V0-22.25 試験問題 (Q107-Q112):

質問 # 107

An Operator is troubleshooting an application and needs to find the public-facing IP address that clients use to access it. In the context of the Avi object model, which object's configuration would contain this IP address?

- A. The Health Monitor
- B. The Pool
- C. The Virtual Service
- D. The Service Engine Group

正解: C

質問 # 108

A vSphere Administrator is planning an Avi upgrade in a vCenter cloud environment. The production Service Engine Group is configured in N+M mode with a buffer of M=1. The administrator initiates a rolling upgrade for this SEG. What is the expected behavior of the Controller during this process? (Choose 2.)

- A. The Controller will immediately delete one of the old-version Service Engines.
- B. The Controller will first upgrade the 'M' (buffer) Service Engine.
- **C. The Controller will create a new Service Engine with the new software version.**
- D. The Controller will migrate the virtual services from one of the old-version SEs to the other active SEs in the group.
- **E. The Controller places an old-version SE into maintenance mode, then upgrades it in place.**

正解: C、E

質問 # 109

When configuring a vCenter cloud in 'Write Access' mode, the Avi Controller needs a network for the management interface of the Service Engines it will create. An administrator specifies a vSphere port group for this purpose. What is a critical requirement for this management network?

vCenter Cloud Configuration

Management Network:

- Port Group: pg-avi-management

...

Data Networks:

...

- A. It must be the same port group used by the Avi Controller VMs.
- B. It must be configured with DHCP enabled.
- C. It must be a trunk port group allowing all VLANs.
- **D. It must have a route to the Avi Controller's management IP address.**

正解: D

質問 # 110

An Avi Administrator is reviewing a set of logs from a Virtual Service configured to terminate SSL/TLS connections. The goal is to verify that clients are connecting using a strong and modern TLS protocol. Which specific fields within the detailed log entries would provide this information?

(Select all that apply.)

- A. The Client IP
- **B. The SSL Protocol**
- C. The SSL Session ID
- **D. The SSL Cipher**
- E. The Server IP
- F. The SSL Certificate information

正解: B、D

質問 # 111

An application owner reports that their application is "down". An Operator checks the Avi dashboard and finds that the Health Score for the corresponding virtual service is 1. The Operator observes that all four components of the Health Score (Performance, Resource, Anomaly, Security) are extremely low. What are the possible root causes for such a catastrophic failure?

(Select all that apply.)

- A. The virtual service's VIP address has been misconfigured on the upstream router.
- B. The "Log Successful Checks" option on the health monitor was disabled.
- **C. All backend servers in the pool are powered off or have lost network connectivity.**
- **D. The single Service Engine hosting the virtual service has crashed or lost power.**
- E. A network outage has occurred between the Avi Controller and the Service Engines.
- F. The administrator's password for the Avi Controller UI has expired.

正解: C、D
