Identity-and-Access-Management-Architect Exam also assesses a candidate's ability to design and implement identity and access management solutions that meet the unique needs of different types of organizations, such as healthcare, financial services, and government agencies.

### Salesforce Certified Identity and Access Management Architect Sample Questions (Q81-Q86):

#### NEW QUESTION # 81

The CMO of an advertising company has invited an Identity and Access Management (IAM) specialist to discuss Salesforce out-of-box capabilities for configuring the company's login and registration experience on Salesforce Experience Cloud.

The CMO is looking to brand the login page with the company's logo, background color, login button color, and dynamic right-frame from an external URL.

Which two solutions should the IAM specialist recommend?

Choose 2 answers

- A. Build custom pages for branding requirements in Experience Cloud.
- **B. Login & Registration pages can be branded in the Community Administration settings.**
- C. Build custom site pages for reset and forgot password features.
- **D. Use Experience Builder to build branded Reset and Forgot Password pages.**

**Answer: B,D**

#### NEW QUESTION # 82

Universal Containers (UC) is concerned that having a self-registration page will provide a means for "bots" or unintended audiences to create user records, thereby consuming licenses and adding dirty data. Which two actions should UC take to prevent unauthorized form submissions during the self-registration process? Choose

2 answers

- **A. Require a captcha at the end of the self-registration process.**
- B. Primarily use lookup and picklist fields on the self-registration page.
- C. Use open-ended security questions and complex password requirements
- **D. Use hidden fields populated via JavaScript events in the self-registration page.**

**Answer: A,D**

Explanation:

Explanation

To prevent unauthorized form submissions during the self-registration process, UC should require a captcha at the end of the self-registration process and use hidden fields populated via JavaScript events in the self-registration page. These methods will help to verify that the user is a human and not a bot, and also to validate the user's input against some predefined values. Option A is not a good choice because open-ended security questions and complex password requirements may frustrate the user and reduce the conversion rate.

Option B is not a good choice because lookup and picklist fields may not prevent bots from submitting the form, as they can be easily automated or bypassed.

### NEW QUESTION # 83

Universal Containers (UC) is planning to add Wi-Fi enabled GPS tracking devices to its shipping containers so that the GPS coordinates data can be sent from the tracking device to its Salesforce production org via a custom API. The GPS devices have no direct user input or output capabilities.

Which OAuth flow should the identity architect recommend to meet the requirement?

- A. OAuth 2.0 Username-Password Flow for Special Scenarios
- B. OAuth 2.0 Web Server Flow for Web App Integration
- C. OAuth 2.0 JWT Bearer Flow for Server-to-Server Integration
- **D. OAuth 2.0 Asset Token Flow for Securing Connected Devices**

**Answer: D**

Explanation:

Explanation

OAuth 2.0 Asset Token Flow is the flow that allows connected devices to request an asset token from Salesforce. The device obtains an access token and an actor token, and uses them to create an asset token. This flow enables efficient token exchange and automatic linking of devices to Service Cloud Asset records.

### NEW QUESTION # 84

Universal Containers (UC) is looking to purchase a third-party application as an Identity Provider. UC is looking to develop a business case for the purchase in general and has enlisted an Architect for advice. Which two capabilities of an Identity Provider should the Architect detail to help strengthen the business case?

Choose 2 answers

- **A. The Identity Provider can centralize enterprise password policy.**
- B. The Identity Provider can authenticate multiple social media accounts.
- **C. The Identity Provider can authenticate multiple applications.**
- D. The Identity provider can store credentials for multiple applications.

**Answer: A,C**

Explanation:

The two capabilities of an identity provider that the architect should detail to help strengthen the business case are that the identity provider can authenticate multiple applications and that the identity provider can centralize enterprise password policy. These capabilities can provide benefits such as reducing login friction, improving user experience, enhancing security, and simplifying administration. Option B is not a good choice because the identity provider can authenticate multiple social media accounts may not be relevant for UC's business case, as it does not specify how UC will use social media for its identity management. Option C is not a good choice because the identity provider can store credentials for multiple applications may not be desirable or secure for UC's business case, as it may imply that the identity provider is using password vaulting or federation rather than single sign-on (SSO) or identity federation. ### NEW QUESTION # 85

Universal Containers (UC) has decided to replace the homegrown customer portal with Salesforce Experience Cloud. UC will continue to use its third-party single sign-on (SSO) solution that stores all of its customer and partner credentials.

The first time a customer logs in to the Experience Cloud site through SSO, a user record needs to be created automatically.

Which solution should an identity architect recommend in order to automatically provision users in Salesforce upon login?

- A. Third-party AppExchange solution
- **B. Just-in-Time (JIT) provisioning**
- C. Custom login flow and Apex handler
- D. Custom middleware and web services
