## APMG-International ISO-IEC-27001-Foundation Valid Test Topics | Reliable ISO-IEC-27001-Foundation Exam Labs

The ISO-IEC-27001-Foundation practice materials are a great beginning to prepare your exam. Actually, just think of our ISO-IEC-27001-Foundation practice materials as the best way to pass the exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time. It is estimated conservatively that the passing rate of the exam is over 98 percent with our ISO-IEC-27001-Foundation Study Materials as well as considerate services. We not only provide all candidates with high pass rate study materials, but also provide them with good service.

## APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q30-Q35):

### NEW QUESTION # 30

What is the definition of a threat according to ISO/IEC 27000?

- A. A weakness of an asset or a control that can be exploited
- B. A potential cause of an unwanted incident which can result in harm to a system or organization

- C. The risk remaining after risk treatment
- D. A single or a series of unwanted or unexpected information security events

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27000 standards:

According to ISO/IEC 27000:2018, Clause 3.74, a threat is defined as:

"Potential cause of an unwanted incident, which can result in harm to a system or organization." This definition directly matches option A.

\* Option B refers to an "information security incident" (ISO/IEC 27000:2018, Clause 3.32).

\* Option C describes a "vulnerability" (ISO/IEC 27000:2018, Clause 3.67).

\* Option D refers to "residual risk" (ISO/IEC 27000:2018, Clause 3.61).

The standard emphasizes that threats exploit vulnerabilities, causing incidents that can harm information confidentiality, integrity, and availability. Correctly identifying threats is critical for risk assessment (Clause 6.1.2). Thus, the correct definition per ISO/IEC 27000 is A.

**NEW QUESTION # 31**

Which statement describes a purpose of monitoring, measurement, analysis and evaluation according to ISO /IEC 27001?

- A. To track the use of outsourced processes
- B. To ensure that employees and contractors are competent
- C. To monitor the use of information assets
- D. **To evaluate information security performance**

**Answer: D**

Explanation:

Clause 9.1 requires:

"The organization shall evaluate the information security performance and the effectiveness of the information security management system." This is the central purpose of monitoring, measurement, analysis, and evaluation. Competence (B) is covered under Clause 7.2. Monitoring use of assets (C) and outsourced processes (D) may be done, but they are not the formal purpose described in the standard. Instead, performance evaluation ensures the ISMS continues to meet intended outcomes and supports continual improvement.

Thus, the verified purpose is A: To evaluate information security performance.

**NEW QUESTION # 32**

Which information is required to be included in the Statement of Applicability?

- A. **The justification for including each information security control**
- B. The scope and boundaries of the ISMS
- C. The risk assessment approach of the organization
- D. The criteria against which risk will be evaluated

**Answer: A**

Explanation:

Clause 6.1.3 (d) requires that the organization "produce a Statement of Applicability that contains the necessary controls (see Annex A), and justification for inclusions, whether they are implemented or not, and the justification for exclusions." This is the defining requirement of the SoA: it documents which Annex A controls are relevant, which are implemented, and the justification for inclusion/exclusion. While the ISMS scope (A) is documented in Clause 4.3, and risk evaluation criteria (C) are defined in Clause 6.1.2, these do not belong in the SoA. The SoA does not describe the full risk assessment approach (B); that is part of the risk assessment methodology.

Therefore, the mandatory requirement for the SoA is justification for including (or excluding) each information security control.

**NEW QUESTION # 33**

Which output is a required result from risk analysis?

- A. Determined levels of risk
- B. Risk treatment control options
- C. Risk acceptance criteria
- D. Prioritized risks for treatment

**Answer: A**

Explanation:

Clause 6.1.2 (d) states that during risk analysis, the organization shall:

- \* "assess the potential consequences that would result if the risks identified... were to materialize;"
- \* "assess the realistic likelihood of the occurrence of the risks identified;"
- \* "determine the levels of risk."

This makes it clear that the required output of risk analysis is the determined levels of risk. Risk acceptance criteria (A) are set earlier in 6.1.2(a), treatment control options (C) belong to 6.1.3, and prioritization (D) is part of risk evaluation (6.1.2 e). Therefore, the verified correct output is B: Determined levels of risk.

**NEW QUESTION # 34**

Which action is an organization required to take to ensure that personnel are competent to perform their assigned tasks within the ISMS?

- A. Hold up-to-date records on training, skills, experience and qualifications
- B. Ensure that the controls for compliance with legal and contractual requirements are implemented
- C. Ensure all personnel are trained to ISO/IEC 27001 Foundation level
- D. Identify products which could be used in the organization to improve ISMS performance and effectiveness

**Answer: A**

Explanation:

Clause 7.2 (Competence) requires the organization to:

- \* "determine the necessary competence of person(s) doing work under its control that affects its information security performance;"
- \* "ensure that these persons are competent on the basis of appropriate education, training, or experience;"
- \* "retain appropriate documented information as evidence of competence." This makes holding up-to-date records on training, skills, experience, and qualifications (D) the correct answer. Option A is irrelevant to competence. Option B is incorrect since ISO does not require Foundation- level training - competence is context-based. Option C is related to compliance but does not ensure individual competence.

Thus, the verified correct answer is D.

**NEW QUESTION # 35**

.....

Only high-quality and high-precision ISO-IEC-27001-Foundation qualification question can enable learners to be confident to take the qualification examination, and our ISO-IEC-27001-Foundation learning materials are such high-quality learning materials, it can meet the user to learn the most popular test site knowledge. Because our experts have extracted the frequent annual test centers are summarized to provide users. Only excellent learning materials such as our ISO-IEC-27001-Foundation Study Tool can meet the needs of the majority of candidates, and now you should make the most decision is to choose our ISO-IEC-27001-Foundation exam questions.
