ASIS Physical Security Professional Exam Sample Questions (Q121-Q126):

NEW QUESTION # 121

To protect against interruption of critical telecommunications systems, security professionals should recommend:

- A. Wireless communication in lieu of cable
- **B. Two physically separated paths for telecommunications cable entering the facility**
- C. Cable access points be under either direct observation or within CCTV camera view at all times
- D. Tamper-proof fiber optic cables should be used

Answer: B

Explanation:

Using two geographically and physically separate cable paths ensures redundancy. If one path is damaged (e.g., due to construction, sabotage, or natural disaster), the other can maintain communication. This is a key principle in critical infrastructure protection.

A: Surveillance helps detect issues but doesn't prevent physical interruption.

B: Wireless is useful but often less reliable and secure than wired systems.

C: Tamper-proof cables increase security but don't address path redundancy.

NEW QUESTION # 122

During project management, which of the following deliverables are part of the design phase?

- **A. Equipment lists**
- B. Implementation schedule, bidder instructions, and security-device schedules
- C. Cost evaluations and due-diligence results
- D. Recommended safeguards and sole-source justification

Answer: A

Explanation:

In the design phase of a security project, key deliverables include detailed equipment lists, drawings, system specifications, and layout plans. These elements guide the eventual procurement and installation processes.

A, B, and C include elements from other project phases like planning (A), procurement (B), and feasibility (C).

NEW QUESTION # 123

The division of several area programmed supervision results in a aggregate operational audit, and aggregate operational audit considered in aggregate are an entire company's programmed supervision.

- A. False
- **B. True**

Answer: B

Explanation:

Comprehensive Detailed Explanation

When multiple areas of a facility or operation undergo programmed supervision, their findings contribute to an aggregate operational audit. When these audits are viewed collectively, they provide a comprehensive view of the organization's overall operational effectiveness and compliance. This holistic oversight is critical for enterprise-level security governance.
