2026 Real Professional-Cloud-DevOps-Engineer Exam | Trustable Google Cloud Certified - Professional Cloud DevOps Engineer Exam 100% Free Best Vce

VCEPrep is a trusted platform that is committed to helping Google Professional-Cloud-DevOps-Engineer exam candidates in exam preparation. The Professional-Cloud-DevOps-Engineer exam questions are real and updated and will repeat in the upcoming Professional-Cloud-DevOps-Engineer exam dumps. By practicing again and again you will become an expert to solve all the Google Cloud Certified - Professional Cloud DevOps Engineer Exam exam questions completely and before the exam time. As far as the Google Professional-Cloud-DevOps-Engineer Practice Test are concerned, these Google Professional-Cloud-DevOps-Engineer

practice questions are designed and verified by the experience and qualified Google Cloud Certified - Professional Cloud DevOps Engineer Exam exam trainers.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q198-Q203):

NEW QUESTION # 198

You have a CI/CD pipeline that uses Cloud Build to build new Docker images and push them to Docker Hub. You use Git for code versioning. After making a change in the Cloud Build YAML configuration, you notice that no new artifacts are being built by the pipeline. You need to resolve the issue following Site Reliability Engineering practices. What should you do?

- A. Disable the CI pipeline and revert to manually building and pushing the artifacts.
- B. **Change the CI pipeline to push the artifacts to Container Registry instead of Docker Hub.**
- C. Run a Git compare between the previous and current Cloud Build Configuration files to find and fix the bug.
- D. Upload the configuration YAML file to Cloud Storage and use Error Reporting to identify and fix the issue.

Answer: B

NEW QUESTION # 199

You have a CI/CD pipeline that uses Cloud Build to build new Docker images and push them to Docker Hub. You use Git for code versioning. After making a change in the Cloud Build YAML configuration, you notice that no new artifacts are being built by the pipeline. You need to resolve the issue following Site Reliability Engineering practices. What should you do?

- A. Disable the CI pipeline and revert to manually building and pushing the artifacts.
- B. Change the CI pipeline to push the artifacts to Container Registry instead of Docker Hub.
- C. **Run a Git compare between the previous and current Cloud Build Configuration files to find and fix the bug.**
- D. Upload the configuration YAML file to Cloud Storage and use Error Reporting to identify and fix the issue.

Answer: C

Explanation:

Explanation

"After making a change in the Cloud Build YAML configuration, you notice that no new artifacts are being built by the pipeline"- means something wrong on the recent change not with the image registry.

NEW QUESTION # 200

Your company is creating a new cloud-native Google Cloud organization. You expect this Google Cloud organization to first be used by a small number of departments and then expand to be used by a large number of departments. Each department has a large number of applications varying in size. You need to design the VPC network architecture. Your solution must minimize the amount of management required while remaining flexible enough for development teams to quickly adapt to their evolving needs. What should you do?

- A. Create a separate VPC for each department and connect the VPCs with Cloud VPN.
- B. Create a separate VPC for each department and use Private Service Connect to connect the VPCs.
- C. Create a separate VPC for each application and use Private Service Connect to connect the VPCs.
- D. **Create a separate VPC for each department and connect the VPCs with VPC Network Peering.**

Answer: D

NEW QUESTION # 201

You need to build a CI/CD pipeline for a containerized application in Google Cloud. Your development team uses a central Git repository for trunk-based development. You want to run all your tests in the pipeline for any new versions of the application to improve the quality. What should you do?

- A. 1. Trigger Cloud Build to run unit tests when the code is pushed. If all unit tests are successful, build and push the application container to a central registry. 2. Trigger Cloud Build to deploy the container to a testing environment, and run integration tests and acceptance tests. 3. If all tests are successful, the pipeline deploys the application to the production

environment and runs smoke tests

- B. 1. Install a Git hook to require developers to run unit tests before pushing the code to a central repositoryIf all tests are successful build a container2. Trigger Cloud Build to deploy the application container to a testing environment, and run integrationtests and acceptance tests3. If all tests are successful tag the code as production ready Trigger Cloud Build to build and deploy the application container to the production environment
- C. 1. Trigger Cloud Build to build the application container and run unit tests with the container2. If unit tests are successful, deploy the application container to a testing environment, and run integration tests3. If the integration tests are successful the pipeline deploys the application container to the production environment After that, run acceptance tests
- D. 1. Install a Git hook to require developers to run unit tests before pushing the code to a central repository2. Trigger Cloud Build to build the application container Deploy the application container to a testing environment, and run integration tests3. If the integration tests are successful deploy the application container to your production environment. and run acceptance tests

Answer: A

NEW QUESTION # 202

You support an application running on GCP and want to configure SMS notifications to your team for the most critical alerts in Stackdriver Monitoring. You have already identified the alerting policies you want to configure this for. What should you do?

- A. Configure a Slack notification for each alerting policy. Set up a Slack-to-SMS integration to send SMS messages when Slack messages are received. Ensure that your team members add their SMS/phone numbers to the external integration.
- B. Ensure that your team members set their SMS/phone numbers in their Stackdriver Profile. Select the SMS notification option for each alerting policy and then select the appropriate SMS/phone numbers from the list.
- C. Select the Webhook notifications option for each alerting policy, and configure it to use a third-party integration tool. Ensure that your team members add their SMS/phone numbers to the external tool.
- D. Download and configure a third-party integration between Stackdriver Monitoring and an SMS gateway. Ensure that your team members add their SMS/phone numbers to the external tool.

Answer: A

NEW QUESTION # 203

.....

Don't miss practicing the Professional-Cloud-DevOps-Engineer mock exams and score yourself honestly. You have all the time to try Google Professional-Cloud-DevOps-Engineer practice exams and then be confident while appearing for the final turn. The desktop software works on Windows and the web-based format works on all operating systems.
