Fortinet FCP_FMG_AD-7.6 Valid Dumps, FCP_FMG_AD-7.6 Reliable Test Voucher

Nowadays, flexible study methods become more and more popular with the development of the electronic products. The latest technologies have been applied to our FCP_FMG_AD-7.6 actual exam as well since we are at the most leading position in this field. You can get a complete new and pleasant study experience with our FCP_FMG_AD-7.6 Study Materials. Besides, you have varied choices for there are three versions of our FCP_FMG_AD-7.6 practice materials. At the same time, you are bound to pass the FCP_FMG_AD-7.6 exam and get your desired certification for the validity and accuracy of our FCP_FMG_AD-7.6 study materials.

Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which is recommended when you are managing a high volume of logs in your network?

- A. Add and manage FortiAnalyzer from FortiManager.
- B. Forward logs from FortiAnalyzer to FortiManager daily.
- C. Enable advanced ADOM mode on FortiManager.
- D. Store logs on FortiManager and use FortiView.

Answer: A

Explanation:

Adding and managing FortiAnalyzer from FortiManager is recommended for handling a high volume of logs, as FortiAnalyzer is designed specifically for centralized log management, analysis, and reporting, which offloads this workload from FortiManager.

NEW QUESTION # 37

An administrator configures a new BGP peer in the FortiManager device-level database of FortiGate. They reinstall the policy package to the managed FortiGate device without any errors.

However, when the administrator logs in to FortiGate, they do not see the BGP configuration changes. What is the most likely reason why FortiManager did not push the BGP peer changes to FortiGate?

- A. The FortiGate firmware version is different from the FortiManager ADOM version.
- B. The administrator must run a sanity check on FortiManager to make sure the database is not corrupted.
- C. The administrator must use the Install Wizard and select Install device settings only to push BGP settings
- D. Fortigate has a BGP template assigned on the FortiManager database.

Answer: D

Explanation:

If a BGP template is assigned to the FortiGate device on FortiManager, device-level BGP configurations made directly in the device-level database are overridden by the template settings, so the changes do not get pushed to the device.

NEW QUESTION # 38

An administrator sees that the policy package status of HQ-NGFW-1 is Never Installed.

What can you conclude from this status?

- A. The firewall policies exist only in the HQ-NGFW-1 device-level database, and no policy package has been assigned to the firewall.
- B. The firewall policies were created or changed in the ADOM, and they need to be installed on the managed HQ-NGFW-1 for the first time.
- C. The policies have not yet been retrieved from the HQ-NGFW-1 device-level database of FortiManager.
- D. The policy package was never imported to the revision history after HQ-NGFW-1 was registered on FortiManager.

Answer: B

Explanation:

In FortiManager, when a device shows the policy package status as "Never Installed," it means that a policy package has been assigned to that device, but it has never been installed on it. This typically happens when policies were created or modified in the ADOM, but no installation to the firewall has yet occurred.

NEW QUESTION # 39

An administrator has assigned a global policy package to a new ADOM named ADOM1. What will happen if the administrator tries to create a new policy package in ADOM1?

- A. The administrator will be able to select the option to assign the global policy package to the new policy package.
- B. The administrator will have to assign the global policy package from the global ADOM.
- C. FortiManager will automatically install policies on the policy package in ADOM1.
- D. FortiManager will automatically assign the global policy package to the new policy package.

Answer: D

Explanation:

In FortiManager, when a global policy package is assigned to an ADOM, any new policy package created within that ADOM will automatically inherit and include the assigned global policy package. This is designed to ensure consistency and centralized control over shared policies across multiple ADOMs.

NEW QUESTION # 40

Refer to the exhibit. What will happen if the script is run using the Device Database option?
(Choose two.)

FortiManager script

Create New Script

Script Name

Routing

Comments

Type

CLI Script

Run script on

Device Database

Script details

Search...

1 config router prefix-list

2 edit public

3 config rule

4 edit 1

5 set prefix 0.0.0.0/0

6 set action permit

7 next

8 edit 2

9 set prefix 8.8.8.8/32

10 set action deny

11 end

Advanced Device Filters >

Revert All Changes

- A. The Device Settings Status will be tagged as Modified.
- B. You must install these changes using the Install Wizard to a managed device.
- C. The successful execution of a script on the Device Database will create a new revision history.
- D. The script history will show successful installation of the script on the remote FortiGate.

Answer: A,B

Explanation:

Once scripts are run on the device database, you can then install the changes on a managed device using the installation wizard. Since the script changed the device settings in FortiManager, the Config Status shows "Modified" and needs to be installed with Installation Wizard.

NEW QUESTION # 41

.....

In today's society, there are increasingly thousands of people put a priority to acquire certificates to enhance their abilities. With a total new perspective, our FCP_FMG_AD-7.6 study materials have been designed to serve most of the office workers who aim at getting a FCP_FMG_AD-7.6 certification. Our FCP_FMG_AD-7.6 Test Guide keep pace with contemporary talent development and makes every learner fit in the needs of the society. There is no doubt that our FCP_FMG_AD-7.6 latest question can be your first choice for your relevant knowledge accumulation and ability enhancement.
