100% Pass High Hit-Rate Juniper - Exam JN0-105 PDF

If you are now determined to go to research, there is still a little hesitation in product selection. JN0-105 exam prep offers you a free trial version! You can choose one or more versions that you are most interested in, and then use your own judgment. JN0-105 Exam Materials really hope that every user can pick the right JN0-105 study guide for them. If you really lack experience, you do not know which one to choose. You can consult our professional staff.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q28-Q33):

NEW QUESTION # 28

You need to recover the root password on a Junos router without losing the current configuration settings. Which three statements describe what you should perform in this scenario? (Choose three.)

- A. Enter and commit the new root password.
- B. Upgrade the Junos OS to the latest version.
- C. Load the factory-default configuration.
- D. Use a console connection to reboot the device.
- E. Hit the space bar and enter recovery when prompted.

Answer: A,D,E

Explanation:

To recover the root password on a Junos router without losing the configuration, you should (A) enter and commit the new root password once you have gained access to the system, (D) hit the space bar to interrupt the boot process and enter recovery mode when prompted during the boot process, and (E) use a console connection to reboot the device and access the bootloader prompt. These steps allow you to reset the root password while preserving the existing configuration.

NEW QUESTION # 29

You are creating a new policy to accept and redistribute routes into your IGP. In this scenario, which match criteria would you use to identify the route prefixes to select?

- A. route-filter
- B. neighbor
- C. instance
- D. route-type

Answer: A

Explanation:

When creating a policy to accept and redistribute routes into your IGP, "route-filter" (D) is the match criteria used to identify specific route prefixes. Route filters enable you to specify which routes should be accepted, rejected, or modified based on their attributes, such as prefix length or value.

NEW QUESTION # 30

How many login classes are assignable to a user account?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

<https://www.juniper.net/documentation/us/en/software/junos/user-access-evo/user-access/topics/topic-map/junos-os-login-class.html#:~:text=You%20can%20define%20any%20number,to%20an%20individual%20user%20account.>

In Junos OS, each user account can be assigned only one login class. Login classes in Junos OS define the permissions for users, controlling what they can access and modify within the system. This setup helps in maintaining a clear and secure access control mechanism.

NEW QUESTION # 31

You are creating a new policy to accept and redistribute routes into your IGP. In this scenario, which match criteria would you use to identify the route prefixes to select?

- A. route-filter
- B. neighbor

- C. instance
- D. route-type

Answer: A

Explanation:

When creating a new policy to accept and redistribute routes into your Interior Gateway Protocol (IGP), the route-filter match criteria is used to identify the route prefixes to select. The route-filter statement specifies which prefixes should be matched in a policy. This allows for precise control over which routes are accepted and redistributed, facilitating efficient and secure routing policies within the network.

References:

- * "show | display set | match ge-0/0/2" indicating command examples and match criteria from Useful Juniper Commands.txt.
- * Juniper official documentation: Routing Policy and Firewall Filters Configuration Guide.

NEW QUESTION # 32

You are logged in to a Junos OS device with SSH and issued the show protocols | compare command in the configuration, but no output is shown.

Which statement is correct in this scenario?

- A. Someone accidentally deleted the active configuration.
- B. The command only works for interface configuration differences.
- C. You must commit the configuration before any output will be shown.
- **D. There are no changes to the candidate configuration.**

Answer: D

Explanation:

The show | compare command in Junos OS is used to display the differences between the candidate configuration and the active configuration. If no output is shown when you issue this command, it means that there are no changes between the candidate configuration and the active configuration. This indicates that the candidate configuration is identical to the active configuration, and thus no differences are displayed.

NEW QUESTION # 33

.....

The real and updated Juniper Juniper JN0-105 exam dumps file, desktop practice test software, and web-based practice test software are ready for download. Take the best decision of your professional career and enroll in the Junos, Associate (JNCIA-Junos) (JN0-105) certification exam and download Junos, Associate (JNCIA-Junos) (JN0-105) exam questions and starts preparing today.
