100% Pass Quiz Useful Workday-Prism-Analytics - Valid Workday Pro Prism Analytics Exam Test Guide

What's more, part of that DumpsKing Workday-Prism-Analytics dumps now are free: https://drive.google.com/open?id=1XVlSUtLQsciB0hSoiWTl1gD_onK1ebr8

All kinds of exams are changing with dynamic society because the requirements are changing all the time. To keep up with the newest regulations of the Workday-Prism-Analytics exam, our experts keep their eyes focusing on it. And the Workday-Prism-Analytics study tool can provide a good learning platform for users who want to get the test Workday-Prism-Analytics Certification in a short time. If you can choose to trust us, I believe you will have a good experience when you use the Reporting and Analytics study guide, and you can pass the exam and get a good grade in the test Workday-Prism-Analytics certification.

If you have decided to improve yourself IT ability by passing Workday exam tests, choosing our Workday-Prism-Analytics exam braindumps will be definitely right decision. Our DumpsKing promises that you can pass test at your first time to participate in the Workday-Prism-Analytics Dumps Torrent and enhance yourself by practicing exam questions.

>> Valid Workday-Prism-Analytics Test Guide <<

Trustable Valid Workday-Prism-Analytics Test Guide, Ensure to pass the Workday-Prism-Analytics Exam

It will provide them with the Workday-Prism-Analytics exam pdf questions updates free of charge if the Workday-Prism-Analytics

certification exam issues the latest changes. If you work hard using our top-rated, updated, and excellent Workday Workday-Prism-Analytics PDF Questions, nothing can refrain you from getting the Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) certificate on the maiden endeavor.

Workday Pro Prism Analytics Exam Sample Questions (Q10-Q15):

NEW QUESTION # 10
A Prism data administrator notices that several of the Prism calculated fields on their lineage are producing nil results, so they need to revise the expressions for all of the affected calculated fields. Where can they review the expressions in bulk?

- A. The table or dataset where the calculated field was created.
- B. Any dataset in the lineage.
- C. Any table in the lineage.
- D. The View Dataset Lineage report.

Answer: D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
In Workday Prism Analytics, calculated fields are defined within datasets, and their expressions dictate the logic used to compute their values. When issues like nil results arise, an administrator needs a centralized view to review and troubleshoot these expressions. According to the official Workday Prism Analytics study path documents, the View Dataset Lineage report is the tool that allows users to review the lineage of datasets, including the expressions of calculated fields, in bulk. This report provides a visual representation of the data lineage, showing the relationships between tables, datasets, and calculated fields, and allows users to drill into the details of each dataset to inspect the expressions of calculated fields across the lineage.
The other options are not as effective for this purpose:
A: The table or dataset where the calculated field was created: While you can review expressions in the specific dataset where a calculated field was created, this approach does not allow for a bulk review across multiple datasets in the lineage.
C: Any table in the lineage: Tables store raw data and do not contain calculated field expressions, which are defined in datasets.
D: Any dataset in the lineage: Reviewing datasets individually does not provide a bulk view of all calculated fields across the lineage, making it less efficient than the View Dataset Lineage report.
The View Dataset Lineage report is the most efficient way to review and troubleshoot calculated field expressions in bulk, enabling the administrator to identify and revise the problematic expressions causing nil results.

NEW QUESTION # 11
When using a window function to calculate averages in Prism, what field type must the function operate on?

- A. Numeric
- B. Date
- C. Text
- D. Boolean

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
In Workday Prism Analytics, window functions are used to perform calculations across a set of rows, such as calculating averages with a function like AVG. According to the official Workday Prism Analytics study path documents, the AVG window function, which computes the average, must operate on a field of type Numeric.
This is because averaging requires numerical values to perform arithmetic operations (e.g., summing the values and dividing by the count of rows). Non-numeric field types, such as Text or Date, cannot be averaged, and Boolean fields (true/false) are not suitable for this type of calculation. For example, a window function like AVG(salary) OVER (PARTITION BY department) would calculate the average salary per department, where "salary" must be a Numeric field.
The other options are incorrect:
* A. Text: Text fields cannot be used for arithmetic operations like averaging.
* B. Boolean: Boolean fields (true/false) are not suitable for calculating averages.

* D. Date: Date fields cannot be directly averaged; they require conversion to a numeric representation (e.
g., days since a reference date) first.
The requirement for a Numeric field type ensures that the AVG window function can perform the necessary mathematical computations accurately.

NEW QUESTION # 12
You are a new Prism customer and you want to ensure the correct set of fields is brought into a derived dataset. When should you apply a Manage Fields stage?

- A. At the end of the Primary Pipeline of a published dataset.
- B. After the dataset is published.
- C. At the beginning of the primary pipeline of the Base Dataset.
- D. At the beginning of the Primary Pipeline of the derived dataset.

Answer: D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
In Workday Prism Analytics, a Manage Fields stage is used to control the fields in a dataset by renaming, hiding, or changing field types, among other actions. According to the official Workday Prism Analytics study path documents, to ensure the correct set of fields is brought into a derived dataset (DDS), the Manage Fields stage should be applied at the beginning of the Primary Pipeline of the derived dataset (option C).
Placing the Manage Fields stage early in the pipeline-right after the initial import stage (Stage 1)-allows you to define the field structure upfront, ensuring that subsequent transformation stages (e.g., Join, Filter, Calculate Field) operate on the desired set of fields. This approach helps maintain consistency and avoids unnecessary processing of fields that are not needed in later stages.
The other options are not optimal:
* A. After the dataset is published: You cannot add transformation stages like Manage Fields after a dataset is published; transformations must be applied during the dataset's creation or editing.
* B. At the end of the Primary Pipeline of a published dataset: Similar to option A, you cannot modify a published dataset's pipeline, and placing Manage Fields at the end would not prevent unnecessary fields from being processed in earlier stages.
* D. At the beginning of the primary pipeline of the Base Dataset: A Base Dataset does not have a transformation pipeline; it is a direct import of a table, so Manage Fields stages can only be applied in a Derived Dataset.
Applying the Manage Fields stage at the beginning of the derived dataset's Primary Pipeline ensures efficient data preparation and transformation.

NEW QUESTION # 13
You are adding a Join stage and choose Join type of Left Outer Join, causing Workday to search for a matching row in the imported pipeline. What happens if no matching rows exist?

- A. A duplicate row will be generated.
- B. Included fields from the imported pipeline will have NULL values.
- C. Included fields from both pipelines will have NULL values.
- D. The row will be omitted.

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
In Workday Prism Analytics, a Left Outer Join in a Join stage includes all rows from the primary pipeline (the left pipeline) and attempts to match them with rows from the imported pipeline (the right pipeline) based on the join condition. According to the official Workday Prism Analytics study path documents, if no matching rows exist in the imported pipeline for a given row in the primary

pipeline, the row from the primary pipeline is still included in the output, but the fields from the imported pipeline will have NULL values. This behavior ensures that all data from the primary pipeline is retained, while the absence of a match in the imported pipeline is represented by NULLs for the corresponding fields.

The other options are incorrect:

* A. A duplicate row will be generated: A Left Outer Join does not generate duplicate rows; duplicates would occur only if multiple matches exist in the imported pipeline, which is not the case here.
* B. The row will be omitted: In a Left Outer Join, rows from the primary pipeline are never omitted, even if no match is found; this behavior is specific to an Inner Join.
* D. Included fields from both pipelines will have NULL values: Only the fields from the imported pipeline will have NULL values; the fields from the primary pipeline retain their original values.

This behavior of Left Outer Join ensures that all records from the primary pipeline are preserved, with NULLs indicating the absence of matching data from the imported pipeline.

NEW QUESTION # 14

What window function returns the number of rows within a window?

- A. COUNT
- B. AVG
- C. SUM
- D. MAX

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, window functions are used to perform calculations over a defined set of rows (a "window"). According to the official Workday Prism Analytics study path documents, the COUNT window function is used to return the number of rows within a specified window. When applied in a dataset transformation, the COUNT function counts the rows that fall within the window, which can be defined by partitioning (e.g., by a specific column) and ordering criteria. For example, COUNT(*) OVER (PARTITION BY department) would return the number of rows for each department in the dataset.

The other options serve different purposes:

A: MAX: Returns the maximum value within the window, not the number of rows.

B: SUM: Calculates the sum of a numeric field across the window, not the row count.

D: AVG: Computes the average of a numeric field within the window, not the row count.

The COUNT function is specifically designed to provide the row count, making it the correct choice for this purpose in Prism Analytics transformations.

NEW QUESTION # 15

......

You can enter a better company and improve your salary if you obtain the certification for the exam. Workday-Prism-Analytics exam materials will help you pass the exam and get corresponding certification successfully. Workday-Prism-Analytics exam materials contain most of knowledge points for the exam, and you can have a good command of the knowledge points if you choose us. In addition, we offer you free demo for Workday-Prism-Analytics Exam Braindumps, and you can have a try before buying. We provided you with free update for 365 days, and the update version will be sent to your email automatically.
