We learned that a majority of the candidates for the exam are office workers or students who are occupied with a lot of things, and do not have plenty of time to prepare for the AZ-104 exam. So we have tried to improve the quality of our training materials for all our worth. Now, I am proud to tell you that our training materials are definitely the best choice for those who have been yearning for success but without enough time to put into it. There are only key points in our AZ-104 Training Materials. That is to say, you can pass the AZ-104 exam as well as getting the related certification only with the minimum of time and efforts under the guidance of our training materials.

AZ-104: Microsoft Azure Administrator Guide for IT Professionals

Microsoft Certified Solutions Associate (MCSA): Microsoft Azure Administrator is an exam that tests your knowledge of designing solutions with Microsoft Azure. Policy instruments are important for this exam. Worth knowing and understanding and a must read and a great resource for this exam. Reports and guidance and documents and manuals are all included in this practice exam. Troubleshooting and architecting and designing and best practices are all included in this practice exam. Domain specific knowledge is important for this exam. Space and time are both tested on this exam. Security and Training are both important for this exam. Troubleshooting and architecture and design and best practices are all included in this practice exam. **Microsoft AZ-104 exam dumps** include all the relevant information you need to know. Options and steps and practices and tips and tricks and tips and tricks all require you to know each of these different Azure services.

Import and export and migration and design and analysis and configuration and analysis and design are all included in this practice exam. Remember and understand are both important for this exam. Foundation and core and core and core and core and basic and intermediate and advanced are all included in this practice exam. Azcopy is an important tool when you are working with Azure. Explorer and library and panel and panel and panel and panel and command line are all included in this practice exam. Challenging questions require you to know each of these different Azure services.

Microsoft AZ-104 Certification Exam is an essential certification for IT professionals who want to specialize in managing cloud-based solutions. Microsoft Azure Administrator Exam certification helps individuals to validate their skills and knowledge in managing Azure resources and prepares them for the challenges of the modern workplace. AZ-104 exam covers a broad range of topics and requires candidates to demonstrate their expertise in managing Azure resources effectively.

Latest AZ-104 Preparation Materials: Microsoft Azure Administrator Exam - AZ-104 Study Guide - Actualtests4sure

Actualtests4sure Microsoft Azure Administrator Exam (AZ-104) practice exam (desktop and web-based) keep track of the previous attempts. These Microsoft Azure Administrator Exam (AZ-104) practice tests also show mistakes on every attempt. So this feature helps you reduces your chance of failure in the AZ-104 actual examination. The Microsoft AZ-104 Exam Questions are

instantly downloadable right after your purchase. In the same way, Actualtests4sure provides a money back guarantee if in any case you don't ace the AZ-104 exam after using our product. Terms and conditions are mentioned on the guarantee page.

Microsoft Azure Administrator Exam Sample Questions (Q17-Q22):

NEW QUESTION # 17

You have an Azure subscription that has the public IP addresses shown in the following table.

Name	IP version	SKU	Tier	IP address assignment
IP1	IPv4	Standard	Regional	Static
IP2	IPv4	Standard	Global	Static
IP3	IPv4	Basic	Regional	Dynamic
IP4	IPv4	Basic	Regional	Static
IP5	IPv4	Standard	Regional	Static

You plan to deploy an instance of Azure Firewall Premium named FW1. Which IP addresses can you use?

- A. IP1, IP2, and IP5 only
- B. IP1, IP2, IP4, and IP5 only
- C. IP2 Only
- D. IP1 and IP2 only

Answer: A

NEW QUESTION # 18

You have an Azure virtual machine named VM1.

The network interface for VM1 is configured as shown in the exhibit. (Click the Exhibit tab.) You deploy a web server on VM1, and then create a secure website that is accessible by using the HTTPS protocol. VM1 is used as a web server only.

Network Interface: vm1175 Effective security rules Topology
 Virtual network/subnet: RG5-vnet/default Public IP: 40.127.109.108 Private IP: 172.16.1.4 Accelerated networking: Disabled

APPLICATION SECURITY GROUPS

Configure the application security groups

INBOUND PORT RULES

Network security group VM1-nsg (attached to network interface: vm1175)
 Impacts 0 subnets, 1 network interfaces

Add inbound port rule

PRIORITY	NAME	PORT	PROTOCOL	SOURCE	DESTINATION	ACTION
300	RDP	3389	TCP	Any	Any	Allow
400	Rule1	80	TCP	Any	Any	Deny
500	Rule2	80,443	TCP	Any	Any	Deny
1000	Rule4	50-100,400-500	UDP	Any	Any	Allow
2000	Rule5	50-5000	Any	Any	VirtualNetwork	Deny
3000	Rule6	150-300	Any	Any	Any	Allow
4000	Rule3	60-500	Any	Any	VirtualNetwork	Allow
65000	AllowVnetInBound	Any	Any	VirtualNetwork	VirtualNetwork	Allow
65001	AllowAzureLoadBalancerInBo...	Any	Any	AzureLoadBala...	Any	Allow
65500	DenyAllInBound	Any	Any	Any	Any	Deny

You need to ensure that users can connect to the website from the internet. What should you do?

- A. For Rule5, change the Action to Allow and change the priority to 401.
- B. Delete Rule1.
- C. Modify the protocol of Rule4.
- D. Create a new inbound rule that allows TCP protocol 443 and configure the protocol to have a priority of 501.

Answer: A

Explanation:

Explanation

Rule 2 is blocking HTTPS access (port 443) and has a priority of 500.

Changing Rule 5 (ports 50-5000) and giving it a lower priority number will allow access on port 443.

Note: Rules are processed in priority order, with lower numbers processed before higher numbers, because lower numbers have higher priority. Once traffic matches a rule, processing stops.

NEW QUESTION # 19

Hotspot Question

You have the Azure virtual machines shown in the following table.

Name	IP address	Virtual network
VM1	10.0.0.4	VNET1
VM2	172.16.0.4	VNET2
VM3	192.168.0.4	VNET3
VM4	192.168.0.5	VNET3

VNET1, VNET2, and VNET3 are peered.

Name	Type	Value
Server1	A	131.107.2.3
Server2	A	131.107.2.4

VNET1 and VNET2 are linked to an Azure private DNS zone named contoso.com that contains the records shown in the following table.

Name	Type	Value
Server1	A	131.107.3.3
Server2	A	131.107.3.4

The virtual networks are configured to use the DNS servers shown in the following table.

Virtual network	DNS server
VNET1	Default (Azure-provided)
VNET2	Custom: 192.168.0.5
VNET3	Custom: 192.168.0.5

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
From VM1, server1.contoso.com resolves to 131.107.3.3.	<input type="radio"/>	<input type="radio"/>
From VM2, server1.contoso.com resolves to 131.107.3.3.	<input type="radio"/>	<input type="radio"/>
From VM3, server2.contoso.com resolves to 131.107.2.4.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
From VM1, server1.contoso.com resolves to 131.107.3.3.	<input checked="" type="radio"/>	<input type="radio"/>
From VM2, server1.contoso.com resolves to 131.107.3.3.	<input type="radio"/>	<input checked="" type="radio"/>
From VM3, server2.contoso.com resolves to 131.107.2.4.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: Yes

VM1 is in VNET1. In VNET1 Server1 resolves to 131.107.3.3

Box 2: No

VM2 is in VNET2. VNET2 uses custom DNS server 192.168.0.5

Box 3: No

NEW QUESTION # 20

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Resource group
VNET1	Virtual network	RG1
VM1	Virtual machine	RG1

The Not allowed resources types Azure policy is assigned to RG1 and uses the following parameters:

```
Microsoft.Network/virtualNetworks
Microsoft.Compute/virtualMachines
```

In RG1, you need to create a new virtual named VM2, and then connected VM2 to VNET1.

What should you do first?

- A. Remove Microsoft.Network/virtualNetworks from the policy.
- **B. Remove Microsoft.Compute/virtualMachines from the policy.**
- C. Create an Azure Resource Manager template.
- D. Add a subnet to VNET1.

Answer: B

Explanation:

Explanation

The Not allowed resource types Azure policy prohibits the deployment of specified resource types. You specify an array of the resource types to block.

Virtual Networks and Virtual Machines are prohibited.

Reference:

<https://docs.microsoft.com/en-us/azure/governance/policy/samples/not-allowed-resource-types>

NEW QUESTION # 21

You have an Azure virtual machine named VM1 that connects to a virtual network named VNet1. VM1 has the following configurations:

* Subnet: 10.0.0/24

* Availability set: AVSet

* Network security group (NSG): None

* Private IP address: 10.0.0.4 (dynamic)

* Public IP address: 40.90.219.6 (dynamic)

You deploy a standard, Internet-facing load balancer named slb1.

You need to configure slb1 to allow connectivity to VM1.

Which changes should you apply to VM1 as you configure slb1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Before you create a backend pool on slb1, you must:	<input type="checkbox"/> Create and assign an NSG to VM1 <input type="checkbox"/> Remove the public IP address from VM1 <input type="checkbox"/> Change the private IP address of VM1 to static
Before you can connect to VM1 from slb1, you must:	<input type="checkbox"/> Create and configure an NSG <input type="checkbox"/> Remove the public IP address from VM1 <input type="checkbox"/> Change the private IP address of VM1 to static

Answer:

Explanation:

Before you create a backend pool on slb1, you must:	<input checked="" type="checkbox"/> Create and assign an NSG to VM1 <input type="checkbox"/> Remove the public IP address from VM1 <input type="checkbox"/> Change the private IP address of VM1 to static
Before you can connect to VM1 from slb1, you must:	<input checked="" type="checkbox"/> Create and configure an NSG <input type="checkbox"/> Remove the public IP address from VM1 <input type="checkbox"/> Change the private IP address of VM1 to static

NEW QUESTION # 22

.....

Do not miss the opportunity to buy the best AZ-104 preparation questions in the international market which will also help you to advance with the times. If you are still worrying about our AZ-104 exam questions, I would like to help you out with the free demos of our AZ-104 Training Materials compiled by our company. There are so many strong points of our AZ-104 training materials, such as wide applicability, sharpen the saw and responsible after sale service to name.
