

# Test AZ-104 Engine & AZ-104 Reliable Test Sims

2026 Latest ITCertMagic AZ-104 PDF Dumps and AZ-104 Exam Engine Free Share: [https://drive.google.com/open?id=1lk5jC8JfHk\\_86mzObbXob8M4fymueK-E](https://drive.google.com/open?id=1lk5jC8JfHk_86mzObbXob8M4fymueK-E)

All these AZ-104 exam questions formats contain the real Microsoft Azure Administrator (AZ-104) exam practice test questions that assist you in preparation and you will feel confident to pass the final Microsoft AZ-104 exam easily. The Microsoft AZ-104 desktop practice test software and web-based practice test software, both are the mock Microsoft Azure Administrator (AZ-104) exam that provides you real-time AZ-104 exam environment for quick and complete preparation.

Microsoft Azure is one of the most popular and widely used cloud computing services in the world. It provides a wide range of services and solutions to help organizations of all sizes to build, manage, and deploy applications and services in the cloud. To become a proficient Azure administrator, you'll need to have a strong understanding of various Azure services, tools, and technologies. That's where the Microsoft AZ-104 Certification Exam comes in.

## **AZ-104 Reliable Test Sims | AZ-104 Real Exams**

If you feel that you always suffer from procrastination and cannot make full use of your spare time, maybe our AZ-104 study materials can help you solve your problem. We are willing to recommend you to try the AZ-104 practice guide from our company. Our AZ-104 learning questions are in high quality and efficiency test tools for all people. You can just try our three different versions of our AZ-104 training quiz, you will find that you can study at anytime and anyplace.

Microsoft AZ-104 exam is designed for IT professionals who want to become certified Azure administrators. Microsoft Azure Administrator certification exam tests the candidate's knowledge and skills in managing Azure resources, implementing and managing storage solutions, configuring and managing virtual networks, and monitoring and optimizing Azure solutions.

Microsoft AZ-104 exam is designed to test the skills and knowledge of professionals who are interested in becoming Microsoft Azure Administrators. Azure is one of the most popular cloud platforms in the world, and this certification will give you the credibility to work with it. AZ-104 Exam is the gateway to becoming a certified Microsoft Azure Administrator and is ideal for IT professionals who want to take their career to the next level.

## Microsoft Azure Administrator Sample Questions (Q99-Q104):

### NEW QUESTION # 99

You have an Azure subscription that contains the virtual machines shown in the following table.

You deploy a load balancer that has the following configurations:

\* Name: LB1

\* Type: internal

\* SKU: Standard

\* Virtual network: VNET1

You need to ensure that you can add VM1 and VM2 to the backend pool of LB1.

Solution: You disassociate the public IP address from the network interface of VM2.

Does this meet the goal?

- A. Yes
- B. No

**Answer: A**

Explanation:

Explanation

You can only attach virtual machines in the same region and that have a standard SKU public IP configuration or no public IP configuration. All IP configurations must be on the same virtual network.

### NEW QUESTION # 100

You have an Azure virtual machine named VM1 that connects to a virtual network named VNet1. VM1 has the following configurations:

Subnet: 10.0.0.0/24

Availability set: AVSet

Network security group (NSG): None

Private IP address: 10.0.0.4 (dynamic)

Public IP address: 40.90.219.6 (dynamic)

You deploy a standard, Internet-facing load balancer named slb1.

You need to configure slb1 to allow connectivity to VM1.

Which changes should you apply to VM1 as you configure slb1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

Box 1: Remove the public IP address from VM1

If the Public IP on VM1 is set to Dynamic, that means it is a Public IP with Basic SKU because Public IPs with Standard SKU have Static assignments by default, that cannot be changed. We cannot associate Basic SKUs IPs with Standard SKUs LBs. One cannot create a backend SLB pool if the VM to be associated has a Public IP. For Private IP it doesn't matter whether it is dynamic or static, still we can add the such VM into the SLB backend pool.

Box 2: Create and configure an NSG

Standard Load Balancer is built on the zero trust network security model at its core. Standard Load Balancer secure by default and is part of your virtual network. The virtual network is a private and isolated network.

This means Standard Load Balancers and Standard Public IP addresses are closed to inbound flows unless opened by Network Security Groups. NSGs are used to explicitly permit allowed traffic. If you do not have an NSG on a subnet or NIC of your virtual

machine resource, traffic is not allowed to reach this resource. To learn more about NSGs and how to apply them for your scenario, see Network Security Groups. Basic Load Balancer is open to the internet by default.

<https://docs.microsoft.com/en-us/azure/load-balancer/load-balancer-overview>

### NEW QUESTION # 101

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription that contains the following resources:

A virtual network that has a subnet named Subnet1

Two network security groups (NSGs) named NSG-VM1 and NSG-Subnet1

A virtual machine named VM1 that has the required Windows Server configurations to allow Remote Desktop connections NSG-Subnet1 has the default inbound security rules only.

NSG-VM1 has the default inbound security rules and the following custom inbound security rule:

Priority: 100

Source: Any

Source port range: \*

Destination: \*

Destination port range: 3389

Protocol: UDP

Action: Allow

VM1 connects to Subnet1. NSG1-VM1 is associated to the network interface of VM1. NSG-Subnet1 is associated to Subnet1.

You need to be able to establish Remote Desktop connections from the internet to VM1.

Solution: You add an inbound security rule to NSG-Subnet1 that allows connections from the Any source to the VirtualNetwork destination for port range 3389 and uses the TCP protocol. You remove NSG-VM1 from the network interface of VM1.

Does this meet the goal?

- A. No
- B. Yes

**Answer: A**

Explanation:

The default port for RDP is TCP port 3389. A rule to permit RDP traffic must be created automatically when you create your VM.

Note on NSG-Subnet1: Azure routes network traffic between all subnets in a virtual network, by default.

<https://docs.microsoft.com/en-us/azure/virtual-machines/troubleshooting/troubleshoot-rdp-connection>

### NEW QUESTION # 102

You have an Azure subscription named Subscription1 that contains the resources shown in the following table.

In storage1, you create a blob container named blob1 and a file share named share1.

Which resources can be backed up to Vault1 and Vault2? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: VM1 only

VM1 is in the same region as Vault1.

File1 is not in the same region as Vault1.

SQL is not in the same region as Vault1.

Blobs cannot be backup up to service vaults.

Note: To create a vault to protect virtual machines, the vault must be in the same region as the virtual machines.

Box 2: Share1 only.

Storage1 is in the same region (West USA) as Vault2. Share1 is in Storage1.

Note: After you select Backup, the Backup pane opens and prompts you to select a storage account from a list of discovered supported storage accounts. They're either associated with this vault or present in the same region as the vault, but not yet associated to any Recovery Services vault.

<https://docs.microsoft.com/bs-cyrl-ba/azure/backup/backup-create-rs-vault>

<https://docs.microsoft.com/en-us/azure/backup/backup-afs>

### NEW QUESTION # 103

You have a hybrid deployment of Azure AD that contains the users shown in the following table.

You need to modify the JobTitle and UsageLocation attributes for the users.

For which users can you modify the attributes from Azure AD? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: User1 and User3 only

You must use Windows Server Active Directory to update the identity, contact info, or job info for users whose source of authority is Windows Server Active Directory.

Box 2: User1, User2, and User3

Usage location is an Azure property that can only be modified from Azure AD (for all users including Windows Server AD users synced via Azure AD Connect).
