The last but not least, we can provide you with a free trial service on the ADX-211 exam questions.

Salesforce Administer, Extend, and Automate Salesforce Sample Questions (Q201-Q206):

NEW QUESTION # 201

The administrator at Universal Containers does a soft launch of the Salesforce Authenticator app and allows users to optionally use it to log in. The administrator would now like to look at how many users have successfully used it since it was rolled out.

What are two ways the administrator can get this information?

Choose 2 answers

- A. Open the Login Access Policies in Setup which shows how many users are using MFA.
- **B. Create a new view in Identity Verification History, specifying Method.**
- C. Run a session setting report, specifying login methods by user.
- **D. Export Login History and filter based off of Authentication Method Reference,**

Answer: B,D

Explanation:

Salesforce Authenticator is an app that adds an extra layer of security for logging into Salesforce by requiring users to verify their identity using their mobile device after entering their username and password on Salesforce login page. To see how many users have successfully used Salesforce Authenticator since it was rolled out, an administrator can use two methods:

A) Create a new view in Identity Verification History, specifying Method.

Identity Verification History is a tool that shows information about each identity verification event for users in your org, such as the date and time, the verification method used, the IP address, and the status of the verification. By creating a new view in Identity Verification History and specifying the method as Salesforce Authenticator, an administrator can see how many users have used the app to verify their identity when logging in. Reference: https://help.salesforce.com/s/articleView?id=sf.identity_verification_history.htm&type=5

D) Export Login History and filter based off of Authentication Method Reference.

Login History is a tool that shows information about each login attempt for users in your org, such as the date and time, the username, the source IP address, the login type, and the status of the login. By exporting Login History as a CSV file and filtering based on the Authentication Method Reference column, an administrator can see how many users have used Salesforce Authenticator as their authentication method when logging in. Reference: https://help.salesforce.com/s/articleView?id=sf.monitoring_login_history.htm&type=5

NEW QUESTION # 202

AW Computers has enabled the feature for Contact to multiple Accounts. A rep is trying to remove the primary Account from a Contact but is unable to do so. The administrator has already updated the page layout to no longer require an Account.

What could be the issue?

- A. Private Contacts need to be enabled in Setup.
- **B. A primary Account relationship is required on a Contact regardless of the page layout settings.**
- C. The Contact has indirect relationships to other Accounts.
- D. The Account Contact relationship record needs to be deleted first in order to disassociate the Contact from the Account.

Answer: B

NEW QUESTION # 203

The sales agents at DreamHouse Realty have a profile that allows them to import records for a custom object called House. The agents only need to make imports occasionally and typically import around 100 new records at a time.

What tool should the agents use to upload records?

- A. Data Loader
- **B. Data Import Wizard**
- C. Bulk API
- D. Apex

Answer: B

Explanation:

Data Import Wizard is a tool that allows administrators to import data for standard and custom objects in Salesforce using CSV files. Data Import Wizard can handle up to 50,000 records at a time and supports simple data transformations and validations. Data Import Wizard can be used to upload records for a custom object when the number of records is small and the import frequency is low.

NEW QUESTION # 204

Cloud Kicks (CK) has a sneaker maintenance plan that it includes with all orders for its new line of Bluetooth-enabled custom sneakers. The sneaker maintenance plan gives each customer 6 months of phone support in case they have issues with their new sneakers. The administrator at CK is having a hard time keeping up with the work associated with managing the maintenance plan. What should the administrator do to help manage the plan?

- A. Use Flow to automatically create and assign entitlements.
- B. Create a support process for the maintenance plan.
- **C. Set up and configure entitlement templates.**
- D. Ensure milestones are in place for the maintenance plan.

Answer: C

NEW QUESTION # 205

AW Computers has enabled the feature for Contact to multiple Accounts. A rep is trying to remove the primary Account from a Contact but is unable to do so. The administrator has already updated the page layout to no longer require an Account. What could be the issue?

- A. Private Contacts need to be enabled in Setup.
- B. The Contact has indirect relationships to other Accounts.
- **C. A primary Account relationship is required on a Contact regardless of the page layout settings.**
- D. The Account Contact relationship record needs to be deleted first in order to disassociate Contact from the Account.

Answer: C

Explanation:

When Contacts to Multiple Accounts is enabled, a contact must always be associated with a primary account, even if the account field is not required on the page layout. The primary account determines how the contact is shared and how roll-up summary fields calculate values from the contact records. To remove the primary account from a contact, the contact must be deleted or merged with another contact. Reference: https://help.salesforce.com/s/articleView?id=sf.relatng_contacts_to_multiple_accounts.htm&type=5
