

Best Way to Pass Microsoft AZ-120 Certification Exam

BTW, DOWNLOAD part of CertkingdomPDF AZ-120 dumps from Cloud Storage: https://drive.google.com/open?id=1n_pfcis9Hynia3wqtrPi3UdDOHZ8OY10

The CertkingdomPDF is committed to making the entire AZ-120 exam preparation journey simple, smart, and successful. To achieve this objective the CertkingdomPDF is offering the top-rated and updated AZ-120 exam practice test questions in three different formats. All these three CertkingdomPDF AZ-120 Exam Questions formats contain the real, valid, and error-free Planning and Administering Microsoft Azure for SAP Workloads (AZ-120) exam practice test questions that are ideal study material for quick Microsoft AZ-120 exam preparation.

The Planning and Administering Microsoft Azure for SAP Workloads certification exam requires candidates to have a deep understanding of Azure services and how they can be used to manage SAP workloads effectively. Candidates should also have experience with SAP systems and should be familiar with SAP HANA, SAP NetWeaver, and SAP S/4HANA.

New AZ-120 Braindumps Files | 100% AZ-120 Correct Answers

Perhaps you have had such an unpleasant experience about what you brought in the internet was not suitable for you in actual use, to avoid this, our company has prepared AZ-120 free demo in this website for our customers. The content of the free demo is part of the content in our real AZ-120 Study Guide. Therefore, you can get a comprehensive idea about our real AZ-120 study materials. And you will find there are three kinds of versions of AZ-120 learning materials for you to choose from namely, PDF Version Demo, PC Test Engine and Online Test Engine.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q30-Q35):

NEW QUESTION # 30

Your on-premises network contains an Active Directory domain.

You are deploying a new SAP environment on Azure.

You need to configure SAP Single Sign-On to ensure that users can authenticate to SAP GUI and SAP WebGUI.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

☐

Answer:

Explanation:

☐

NEW QUESTION # 31

You are deploying an SAP environment across Azure Availability Zones. The environment has the following components:

ASCS/ERS instances that use a failover cluster

SAP application servers across the Azure Availability Zones

Database high availability by using a native database solution

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

NEW QUESTION # 32

You plan to deploy an Azure virtual machine that will host an SAP HANA database.

You need to provide a 512-GB volume for the database. The volume must meet the following requirements:

- * Provide storage resiliency.
- * Provide maximum throughput.
- * Maximize disk space usage without affecting storage resiliency.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 33

Your on-premises network contains SAP and non-SAP applications. ABAP-based SAP systems are integrated with IDAP and use user name/password-based authentication for login.

You plan to migrate the SAP applications to Azure.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 34

You are planning the deployment of a three-tier SAP landscape on Azure that will use SAP HANA. The solution must meet the following requirements:

- * Network latency between SAP NetWeaver and HANA must be minimized.
- * An SAP production landscape on Azure must be supported.
- * Network performance must be validated regularly.

What should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Graphical user interface, text Description automatically generated with medium confidence

Box 1: A proximity placement group

Azure offers proximity placement groups. Proximity placement groups can be used to force grouping of different VM types into a single Azure datacenter to optimize the network latency between these different VM types to the best possible. In the process of deploying the first VM into such a proximity placement group, the VM gets bound to a specific datacenter.

Note: SAP applications based on the SAP NetWeaver or SAP S/4HANA architecture are sensitive to network latency between the SAP application tier and the SAP database tier. This sensitivity is the result of most of the business logic running in the application layer. Because the SAP application layer runs the business logic, it issues queries to the database tier at a high frequency, at a rate of thousands or tens of thousands per second.

In most cases, the nature of these queries is simple. They can often be run on the database tier in 500 microseconds or less.

Box 2: Enable Accelerated Networking

To further reduce network latency between Azure VMs, we recommend that you choose Azure Accelerated Networking. Use it when you deploy Azure VMs for an SAP workload, especially for the SAP application layer and the SAP DBMS layer.

Box 3: Network Performance Monitor

Network Performance Monitor (NPM) - a cloud-based network monitoring solution for cloud-only, on-premises, and hybrid networking environments.

Network Performance Monitor offers three broad capabilities:

- * Performance Monitor: You can monitor network connectivity across cloud deployments and on-premises locations, multiple data centers, and branch offices and mission-critical multitier applications or microservices. With Performance Monitor, you can detect network issues before users complain.
- * Service Connectivity Monitor
- * ExpressRoute Monitor

Note 2: Azure Monitor for SAP Solutions is an Azure-native monitoring product for anyone running their SAP landscapes on Azure. It works with both SAP on Azure Virtual Machines and SAP on Azure Large Instances.
