Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q52-Q57):

NEW QUESTION # 52

Business case completed, Business resources trained, User stories mapped to the business case, and Project tools identified are all deliverable's of the _____ phase.

- A. Stabilization
- **B. Inception**
- C. Pre-Inception
- D. Development

Answer: B

Explanation:

The correct answer is D. Inception because the activities listed in the question are foundational planning and alignment deliverables that are typically completed at the beginning of a Guidewire InsuranceSuite implementation. The Inception phase is the stage where the project team establishes a shared understanding of scope, business objectives, project readiness, and delivery approach before moving into deeper requirements elaboration and development work.

A completed business case is a core early-phase deliverable because the project must confirm the value, goals, and justification for the implementation. Business resources trained also fits Inception, since key business participants need enough preparation to contribute effectively in workshops, story discussions, and decision-making activities. User stories mapped to the business case is another strong indicator of Inception because this is where high-level business goals are connected to implementation scope and prioritized requirements. Project tools identified also belongs here, as the team needs to define and set up collaboration, tracking, and delivery tools before execution becomes fully active.

The other options are less appropriate. Development focuses on building, configuring, and testing the solution rather than establishing business alignment and project setup. Stabilization happens later and is generally concerned with final validation, defect resolution, readiness, and deployment support. Pre-Inception may include preliminary planning or sales-oriented preparation, but the specific deliverables listed in the question reflect formal project startup and structured implementation readiness, which align best to Inception

So, when Guidewire project deliverables include business case completion, trained business participants, mapped user stories, and identified project tools, they are most accurately associated with the Inception phase

NEW QUESTION # 53

Which of the following statements describe the importance of acceptance criteria in a software implementation project? (Select three)

- A. They describe desired system functionality when "done" from the business perspective
- B. They are acceptance tests
- C. They describe how to correctly configure and code requirements
- D. They facilitate the writing of automated test scenarios with BDD
- E. They are used to confirm whether the user story can be accepted

Answer: A,D,E

Explanation:

Acceptance criteria play a critical role in Guidewire InsuranceSuite projects by defining clear, testable conditions that must be met for a user story to be considered complete. Their importance spans business alignment, testing clarity, and delivery quality, making Options A, C, and E correct.

Acceptance criteria describe the desired system functionality when the story is "done" from the business perspective (Option A). They translate business intent into observable outcomes, ensuring that all stakeholders share a common understanding of expected behavior.

They also facilitate the creation of automated test scenarios, especially when using Behavior-Driven Development (BDD) approaches (Option C). Well-written acceptance criteria can be directly mapped to test scenarios, reducing ambiguity and improving test coverage.

Finally, acceptance criteria are used to confirm whether a user story can be accepted (Option E). They provide an objective basis for determining completion, helping Product Owners and Business Analysts validate that the delivered functionality meets expectations. The remaining options are incorrect. Acceptance criteria do not describe how to configure or code the solution (Option B); that is an implementation detail. They are also not acceptance tests themselves (Option D) but serve as inputs to define such tests.

NEW QUESTION # 54

What features have been added to InsuranceSuite to make it more accessible to disabled users that Business Analysts should consider when making changes to the User Interface? (Choose two)

- A. New screen settings for user interface magnification and color contrast
- B. Braille keyboard support for the visually impaired
- C. User interface support with closed captions for the hearing impaired
- D. Screen reader support with Alt text and WAI-ARIA attributes

Answer: A,D

Explanation:

Guidewire InsuranceSuite includes several accessibility enhancements designed to support users with disabilities and align with modern accessibility standards. Business Analysts must be aware of these features when defining or modifying UI requirements to ensure accessibility is preserved.

One key enhancement is user interface magnification and color contrast settings (Option B). These features support users with visual impairments by allowing them to adjust screen readability without altering business functionality.

Another critical capability is screen reader support using Alt text and WAI-ARIA attributes (Option D).

These standards enable assistive technologies to interpret UI elements correctly, ensuring users who rely on screen readers can navigate and interact with the application effectively.

The other options are incorrect. Braille keyboard support (Option A) and closed-caption UI support (Option C) are not standard InsuranceSuite features.

Considering accessibility early helps analysts design inclusive solutions, avoid rework, and comply with accessibility regulations and best practices.

NEW QUESTION # 55

Guidewire Marketplace is a website designed for browsing and downloading _____ and product add-ons.

- A. Detailed requirements documentation
- B. Accelerators
- C. User story cards
- D. End-user documentation

Answer: B

Explanation:

The Guidewire Marketplace is an ecosystem designed to help customers and partners accelerate implementations and extend product capabilities. The primary content available for browsing and downloading includes accelerators and product add-ons, making Option D the correct answer.

Accelerators available on the Marketplace include pre-built integrations, tools, templates, utilities, and solution components that address common insurance implementation needs. These assets are designed to reduce implementation time, lower risk, and promote reuse of proven solutions across Guidewire projects.

The Marketplace does not host user story cards (Option A), detailed requirements documentation (Option C), or end-user documentation (Option B). Those resources are typically found within SurePath collateral, project tools, or the Guidewire Education Marketplace.

For analysts, understanding the Marketplace is important because accelerators can influence solution design decisions, reduce the need for custom development, and support faster delivery while remaining aligned with Guidewire standards.

NEW QUESTION # 56

When prioritizing the implementation of a new state regulation for flood risk assessment in commercial property policies, which factors are most crucial for ensuring strategic value alignment and a successful Guidewire Cloud deployment?

- A. Prioritizing integration with a third-party flood modeling service that significantly deviates from Guidewire OOTB capabilities
- B. Implementing only the minimum data capture quickly and postponing proper data modeling
- C. Focusing solely on the legal interpretation of the regulation, even if it requires complex custom development
- **D. Analyzing how the new assessment process aligns with the company's long-term objective of reducing overall loss exposure and improving underwriting excellence**
- E. Maximizing reuse of legacy system code and UI elements regardless of Guidewire Cloud Standards
- **F. Ensuring the new solution adheres to Guidewire Cloud Standards to enable seamless future updates and optimal platform performance**

Answer: D,F

Explanation:

In Guidewire Cloud implementations, prioritization decisions must balance regulatory compliance, business value, and long-term platform sustainability. The most crucial factors are strategic business alignment and adherence to Guidewire Cloud Standards, making Options A and C correct.

Analyzing how the regulation aligns with long-term underwriting and risk management objectives (Option A) ensures the solution delivers more than compliance. This approach supports value-driven requirements by improving underwriting quality and reducing loss exposure, rather than treating regulation as a standalone obligation.

Ensuring adherence to Guidewire Cloud Standards (Option C) is equally critical. These standards protect upgradeability, performance, and operational stability. Solutions that follow Cloud Standards are easier to maintain and less likely to cause issues during future platform upgrades.

The remaining options represent short-term or high-risk approaches. Over-customization (Option B), deviation from OOTB functionality (Option D), deferring proper data modeling (Option E), and reusing legacy patterns (Option F) all increase technical debt and threaten cloud success.

NEW QUESTION # 57

.....

Free update for 365 days for InsuranceSuite-Analyst study guide materials is available. That is to say, in the following year, you can get the latest information of the exam for free. Besides, our system will send the latest version of InsuranceSuite-Analyst exam dumps to your email automatically. And you just need to receive them and carry on your practice.
