New HashiCorp Terraform-Associate-003 Learning Materials, Pass Terraform-Associate-003 Guide

Are you preparing for taking the HashiCorp Certified: Terraform Associate (003) (HCTA0-003) (Terraform-Associate-003) certification exam? We understand that passing the Terraform-Associate-003 exam with ease is your goal. However, many people struggle because they rely on the wrong study materials. That's why it's crucial to prepare for the Terraform-Associate-003 Exam using the right Terraform-Associate-003 Exam Questions learning material. Look no further than Prep4cram, where we take responsibility for providing accurate and reliable HashiCorp Terraform-Associate-003 questions prepared by our team of experts.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q76-Q81):

NEW QUESTION # 76

Which Terraform collection type should you use to store key/value pairs?

- A. Set
- B. list
- C. Tuple
- D. Map

Answer: D

Explanation:

The Terraform collection type that should be used to store key/value pairs is map. A map is a collection of values that are accessed by arbitrary labels, called keys. The keys and values can be of any type, but the keys must be unique within a map. For example, `var = { key1 = "value1", key2 = "value2" }` is a map with two key/value pairs. Maps are useful for grouping related values together, such as configuration options or metadata. References = [Collection Types], [Map Type Constraints]

NEW QUESTION # 77

You're writing a Terraform configuration that needs to read input from a local file called `id_rsa.pub`. Which built-in Terraform function can you use to import the file's contents as a string?

- A. `file("id_rsa.pub")`
- B. `templatefile("id_rsa.pub")`
- C. `fileset<"id_rsa.pub"`
- D. `filebase64("id_rsa.pub")`

Answer: A

Explanation:

To import the contents of a local file as a string in Terraform, you can use the `file` function. By specifying `file("id_rsa.pub")`, Terraform reads the contents of the `id_rsa.pub` file and uses it as a string within your Terraform configuration. This function is particularly useful for scenarios where you need to include file data directly into your configuration, such as including an SSH public key for provisioning cloud instances. References = This information is a standard part of Terraform's functionality with built-in functions, as outlined in Terraform's official documentation and commonly used in various Terraform configurations.

NEW QUESTION # 78

If a DevOps team adopts AWS CloudFormation as their standardized method for provisioning public cloud resources, which of the following scenarios poses a challenge for this team?

- A. The team is asked to manage a new application stack built on AWS-native services
- B. The team is asked to build a reusable code based that can deploy resources into any AWS region
- C. The DevOps team is tasked with automating a manual, web console-based provisioning.
- D. The organization decides to expand into Azure wishes to deploy new infrastructure

Answer: D

Explanation:

Explanation

This is the scenario that poses a challenge for this team, if they adopt AWS CloudFormation as their standardized method for provisioning public cloud resources, as CloudFormation only supports AWS services and resources, and cannot be used to provision infrastructure on other cloud platforms such as Azure.

NEW QUESTION # 79

Terraform configuration can only import modules from the public registry.

- A. True
- B. False

Answer: B

Explanation:

Explanation

Terraform configuration can import modules from various sources, not only from the public registry. Modules can be sourced from local file paths, Git repositories, HTTP URLs, Mercurial repositories, S3 buckets, and GCS buckets. Terraform supports a number of common conventions and syntaxes for specifying module sources, as documented in the [Module Sources] page. References = [Module Sources]

NEW QUESTION # 80

When should you write Terraform configuration files for existing infrastructure that you want to start managing with Terraform?

- A. You can import infrastructure without corresponding Terraform code
- **B. Before you run terraform Import**
- C. Terraform will generate the corresponding configuration files for you
- D. After you run terraform import

Answer: B

Explanation:

Explanation

You need to write Terraform configuration files for the existing infrastructure that you want to import into Terraform, otherwise Terraform will not know how to manage it. The configuration files should match the type and name of the resources that you want to import.

NEW QUESTION # 81

.....
