Practice PCCP Questions, New PCCP Braindumps Files

What's more, part of that ExamsLabs PCCP dumps now are free: https://drive.google.com/open?id=1103OmQMf9akbh2zoP0cbpVcu2Q2A4mJX

To make your success a certainty, ExamsLabs offers free updates on our Palo Alto Networks PCCP real dumps for up to three months. It means all users get the latest and updated Palo Alto Networks PCCP practice material to clear the Palo Alto Networks Certified Cybersecurity Practitioner PCCP certification test on the first try. We are a genuine brand working to smoothen up your PCCP exam preparation. ExamsLabs allows all visitors to try a free demo of PCCP pdf questions and practice tests to assess the quality of our PCCP Study Material. Your money is 100% secure as we will ensure that you crack the Palo Alto Networks PCCP test on the first attempt. You will also enjoy 24/7 efficient support from our customer support team before and after the purchase of Palo Alto Networks PCCP exam dumps. If you face any issues while using our PCCP PDF dumps or PCCP practice exam software (desktop and web-based), contact ExamsLabs customer service for guidance.

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details

Topic 1	• Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.
Topic 2	• Cybersecurity:This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.
Topic 3	• Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.
Topic 4	• Network Security: This domain targets a Network Security Specialist and includes knowledge of Zero Trust Network Access (ZTNA) characteristics, functions of stateless and next-generation firewalls (NGFWs), and the purpose of microsegmentation. It also covers common network security technologies such as intrusion prevention systems (IPS), URL filtering, DNS security, VPNs, and SSL • TLS decryption. Candidates must understand the limitations of signature-based protection, deployment options for NGFWs, cybersecurity concerns in operational technology (OT) and IoT, cloud-delivered security services, and AI-powered security functions like Precision AI.

Furthermore, ExamsLabs is a very responsible and trustworthy platform dedicated to certifying you as a Ariba specialist. We provide a free sample before purchasing Palo Alto Networks PCCP valid questions so that you may try and be happy with its varied quality features. Learn for your Palo Alto Networks certification with confidence by utilizing the ExamsLabs PCCP Study Guide, which is always forward-thinking, convenient, current, and dependable.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q112-Q117):

NEW QUESTION # 112
Match the DNS record type to its function within DNS.
￭

Answer:

Explanation:
￭
Explanation:
The basic DNS record types are as follows:
A (IPv4) or AAAA (IPv6) (Address): Maps a domain or subdomain to an IP address or multiple IP addresses
CNAME (Canonical Name): Maps a domain or subdomain to another hostname
MX (Mail Exchanger): Specifies the hostname or hostnames of email servers for a domain
PTR (Pointer): Points to a CNAME; commonly used for reverse DNS lookups that map an IP address to a host in a domain or subdomain
SOA (Start of Authority): Specifies authoritative information about a DNS zone such as primary name server, email address of the domain administrator, and domain serial number

NS (Name Server): The NS record specifies aan authoritative name server for a given host.
TXT (Text): Stores text-based information

NEW QUESTION # 113

Which network firewall operates up to Layer 4 (Transport layer) of the OSI model and maintains information about the communication sessions which have been established between hosts on trusted and untrusted networks?

- A. Stateless
- B. Stateful
- C. Static packet-filter
- D. Group policy

Answer: B

Explanation:
Stateful packet inspection firewalls Second-generation stateful packet inspection (also known as dynamic packet filtering) firewalls have the following characteristics:
They operate up to Layer 4 (Transport layer) of the OSI model and maintain state information about the communication sessions that have been established between hosts on the trusted and untrusted networks.
They inspect individual packet headers to determine source and destination IP address, protocol (TCP, UDP, and ICMP), and port number (during session establishment only) to determine whether the session should be allowed, blocked, or dropped based on configured firewall rules.
After a permitted connection is established between two hosts, the firewall creates and deletes firewall rules for individual connections as needed, thus effectively creating a tunnel that allows traffic to flow between the two hosts without further inspection of individual packets during the session.
This type of firewall is very fast, but it is port-based and it is highly dependent on the trustworthiness of the two hosts because individual packets aren't inspected after the connection is established.

NEW QUESTION # 114

What are two examples of an attacker using social engineering? (Choose two.)

- A. Acting as a company representative and asking for personal information not relevant to the reason for their call
- B. Compromising a website and configuring it to automatically install malicious files onto systems that visit the page
- C. Leveraging open-source intelligence to gather information about a high-level executive
- D. Convincing an employee that they are also an employee

Answer: A,D

Explanation:
Social engineering attacks manipulate human trust to gain unauthorized access or information. Convincing an employee that an attacker is also an employee builds rapport, lowering defenses for information disclosure or credential sharing. Similarly, impersonating a company representative and requesting unrelated personal data exploits authority bias to deceive victims. These tactics exploit psychological vulnerabilities rather than technical flaws and are prevalent initial steps in multi-stage attacks. Palo Alto Networks highlights the importance of training, multi-factor authentication, and behavior-based threat detection to mitigate social engineering risks effectively.

NEW QUESTION # 115

Which classification of IDS/IPS uses a database of known vulnerabilities and attack profiles to identify intrusion attempts?

- A. Knowledge-based
- B. Behavior-based
- C. Statistical-based
- D. Anomaly-based

Answer: A

Explanation:
A knowledge-based system uses a database of known vulnerabilities and attack profiles to identify intrusion attempts. These types of

systems have lower false-alarm rates than behavior-based systems but must be continually updated with new attack signatures to be effective.

A behavior-based system uses a baseline of normal network activity to identify unusual patterns or levels of network activity that may be indicative of an intrusion attempt.

These types of systems are more adaptive than knowledge-based systems and therefore may be more effective in detecting previously unknown vulnerabilities and attacks, but they have a much higher false-positive rate than knowledge-based systems.

NEW QUESTION # 116

Which option is an example of a North-South traffic flow?

- A. Client-server interactions that cross the edge perimeter
- B. Traffic between an internal server and internal user
- C. An internal three-tier application
- D. Lateral movement within a cloud or data center

Answer: A

Explanation:
North-south refers to data packets that move in and out of the virtualized environment from the host network or a corresponding traditional data center. North-south traffic is secured by one or more physical form factor perimeter edge firewalls.

NEW QUESTION # 117

......

The goal of a Palo Alto Networks PCCP mock exam is to test exam readiness. ExamsLabs's online Palo Alto Networks PCCP practice test can be accessed online through all major browsers such as Chrome, Firefox, Safari, and Edge. You can also download and install the offline version of Palo Alto Networks PCCP practice exam software on Windows-based PCs only. You can prepare for the Palo Alto Networks Certified Cybersecurity Practitioner exam without an internet connection using the offline version of the mock exam. Palo Alto Networks PCCP Practice Test not only gives you the opportunity to practice with real exam questions but also provides you with a self-assessment report highlighting your performance in an attempt.
