## Reliable 300-430 Dumps Ebook | New 300-430 Exam Pass4sure

Many clients worry that after they our 300-430 exam simulation they may fail in the test and waste their money and energy. There are no needs to worry about that situation because our study materials boost high passing rate and hit rate and the possibility to fail in the 300-430 test is very little. Just consider that our pass rate of the 300-430 study guide is high as 98% to 100%, which is unique in the market. And you will get the best pass percentage with our 300-430 learning questions.

## Cisco Implementing Cisco Enterprise Wireless Networks Sample Questions

## (Q156-Q161):

### NEW QUESTION # 156

A wireless engineer is configuring LWA using ISE. The customer is a starting company and requested the wireless users to authenticate against a directory, but LDAP is unavailable. Which solution be proposed in order to have the same security and user experience?

- A. Use a preshared key on the corporate WLAN
- B. Use the internal database of the RADIUS server.
- C. Use SAML
- **D. Use Novell eDirectory**

**Answer: D**

### NEW QUESTION # 157

A wireless network engineer must present a list of all rogue APs with a high severity score to senior management. Which report must be created in Cisco Prime Infrastructure to provide this information?

- A. Rogue AP Count Summary
- B. Rogue AP Events
- C. New Rogue APs
- **D. Rogue APs**

**Answer: D**

### NEW QUESTION # 158

A customer has a distributed wireless deployment model where the WLCs are located in the data centers. Because the file servers are located in the data center, the traffic from the corporate WLAN "Corp-401266017" must go through the controllers, where the guest WLAN "Guest-19283746" traffic must use the local Internet line installed in each office. Which configuration will accomplish this task?

- A. Enable Local Switching for the corporate WLAN and disable it for the guest WLAN.
- B. Enable Local Switching for the corporate and guest WLAN.
- C. Disable Local Switching for the corporate and guest WLAN.
- **D. Disable Local Switching for the corporate WLAN and enable it for the guest WLAN.**

**Answer: D**

Explanation:

In a distributed wireless deployment model, the traffic can either be switched locally or sent back to the controller. For the corporate WLAN "Corp-401266017", it is essential that the traffic goes through the controllers in the data center to access the file servers securely. Therefore, local switching should be disabled for this WLAN. Conversely, for the guest WLAN "Guest-19283746", the requirement is to use the local Internet line. Enabling local switching for this WLAN allows the traffic to bypass the controller and use the local internet, reducing latency and potentially providing a better user experience for guests.

### NEW QUESTION # 159

A wireless engineer is configuring LWA using ISE. The customer is a starting company and requested the wireless users to authenticate against a directory, but LDAP is unavailable. Which solution be proposed in order to have the same security and user experience?

- A. Use a preshared key on the corporate WLAN
- **B. Use the internal database of the RADIUS server.**
- C. Use SAML
- D. Use Novell eDirectory

**Answer: B**

Explanation:

LDAP Identity Source provides access to Active Directory, Sun Directory Server, Novell eDirectory or CUSTOM. No LDAP really means that there IS NO directory server (NO Microsoft, NO SUN, NO Novell) Reference: [https://www.cisco.com/c/en/us/td/docs/security/ise/2-4/admin\\_guide/b\\_ise\\_admin\\_guide\\_24/m\\_extnal\\_identity\\_store.html#reference\\_922CCDAF80684CDEB02D88C3525B3F89](https://www.cisco.com/c/en/us/td/docs/security/ise/2-4/admin_guide/b_ise_admin_guide_24/m_extnal_identity_store.html#reference_922CCDAF80684CDEB02D88C3525B3F89)

### NEW QUESTION # 160

What is the default NMSP echo interval between Cisco MSE and a Wireless LAN Controller?

- A. 15 seconds
- B. 10 seconds
- C. 60 seconds
- D. 30 seconds

**Answer: A**

Explanation:

The default NMSP echo interval between Cisco MSE and a Wireless LAN Controller is 15 seconds. This interval determines how frequently the MSE sends echo messages to the WLC to maintain the NMSP connection and ensure that the link is active and operational.
