In order to evaluate the performance in the real exam like environment, the candidates can easily purchase our quality IDP preparation software. Our IDP exam software will test the skills of the customers in a virtual exam like situation and will also highlight the mistakes of the candidates. The free IDP exam updates feature is one of the most helpful features for the candidates to get their preparation in the best manner with latest changes. The CrowdStrike introduces changes in the IDP format and topics, which are reported to our valued customers. In this manner, a constant update feature is being offered to IDP exam customers.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom templated• scheduled workflows, branching logic, and loops.
Topic 2	<ul style="list-style-type: none">• Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.

Topic 3	<ul style="list-style-type: none"> • User Assessment: Examines user attributes, differences between users • endpoints • entities, risk baselining, risky account types, elevated privileges, watchlists, and honeypot accounts.
Topic 4	<ul style="list-style-type: none"> • Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.
Topic 5	<ul style="list-style-type: none"> • Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.
Topic 6	<ul style="list-style-type: none"> • GraphQL API: Covers Identity API documentation, creating API keys, permission levels, pivoting from Threat Hunter to GraphQL, and building queries.

Free PDF Quiz CrowdStrike - IDP - CrowdStrike Certified Identity Specialist(CCIS) Exam Accurate Free Practice Exams

The IDP test torrent also offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation. Therefore, for your convenience, more choices are provided for you, we are pleased to suggest you to choose our IDP Exam Question for your exam. So with our IDP guide torrents, you are able to pass the exam more easily in the most efficient and productive way and learn how to study with dedication and enthusiasm, which can be a valuable asset in your whole life. It must be your best tool to pass your exam and achieve your target.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q43-Q48):

NEW QUESTION # 43

Which of the following are minimum requirements for showing the Falcon Identity Verification Dialog on the end user's machine?

- A. Internet Explorer 9 and Windows Server 2008
- B. .NET 3.5 and PowerShell 5.1
- C. Windows Vista and .NET 3.5
- D. Windows Server 2008 and PowerShell 5.1

Answer: A

Explanation:

The Falcon Identity Verification Dialog is used to prompt users for identity verification during conditional access enforcement.

According to the CCIS curriculum, Internet Explorer 9 and Windows Server 2008 represent the minimum supported requirements for rendering the Identity Verification Dialog on an end user's system.

This requirement exists because the dialog relies on supported browser and OS components to present authentication challenges reliably during enforcement workflows. Systems that do not meet these minimum requirements may fail to display the dialog correctly, impacting the enforcement of MFA or identity verification actions.

The other options reference runtime frameworks or PowerShell versions that are not directly responsible for rendering the verification dialog. Therefore, Option A is the correct and verified answer.

NEW QUESTION # 44

How does the Falcon sensor for Windows contribute to the enforcement in Falcon Identity Protection?

- A. Encrypts network traffic to ensure secure communication
- B. Enforces strict password complexity rules for user accounts

- C. Manages user access and permissions on domain controllers
- **D. Collects and validates domain authentication events**

Answer: D

Explanation:

The Falcon sensor for Windows plays a critical role in Falcon Identity Protection by collecting and validating domain authentication events directly from domain controllers. According to the CCIS curriculum, the sensor inspects authentication protocols such as Kerberos, NTLM, and LDAP through Authentication Traffic Inspection (ATI).

This telemetry enables Falcon Identity Protection to analyze authentication behavior, build identity baselines, detect anomalies, and generate identity-based detections. The sensor does not enforce password policies, manage permissions, or encrypt network traffic—those functions belong to Active Directory and network infrastructure components.

By providing high-fidelity authentication telemetry without relying on log ingestion, the Falcon sensor enables real-time identity threat detection and Zero Trust enforcement. Therefore, Option D is the correct and verified answer.

NEW QUESTION # 45

Under which CrowdStrike documentation category could you find Identity Protection API information?

- A. Falcon Management
- B. CrowdStrike Store
- **C. CrowdStrike APIs**
- D. Tools and Reference

Answer: C

Explanation:

Identity Protection API documentation is part of CrowdStrike's centralized API documentation structure.

According to the CCIS curriculum, Identity Protection API information is located under the "CrowdStrike APIs" documentation category.

This category includes:

- * API authentication and scopes
- * Identity Protection GraphQL schemas
- * Query examples for detections, incidents, users, and risk
- * Usage guidance and limitations

CrowdStrike consolidates all API-related documentation in one location to ensure consistent access and maintenance across Falcon modules. Identity Protection APIs are not documented under Falcon Management, Store, or general reference sections.

Because all product APIs—including Identity Protection—are documented under CrowdStrike APIs, Option C is the correct and verified answer.

NEW QUESTION # 46

Which of the following Falcon roles CANNOT enable and disable policy rules?

- **A. Identity Protection Domain Administrator**
- B. Identity Protection Administrator
- C. Identity Protection Policy Manager
- D. Falcon Administrator

Answer: A

Explanation:

Falcon Identity Protection enforces role-based access control (RBAC) to ensure that only authorized users can create, modify, or manage policy rules. Policy rules directly impact identity enforcement actions, making proper role separation critical.

According to the CCIS documentation, the ability to enable and disable policy rules is granted to the Identity Protection Policy Manager and the Falcon Administrator roles. These roles are explicitly designed to manage enforcement logic, triggers, and automated identity controls.

The Identity Protection Domain Administrator role, however, is limited to domain-level visibility and management, such as reviewing domain configurations, monitoring risks, and assessing posture. This role does not have permissions to modify or control policy enforcement behavior.

This separation prevents accidental or unauthorized changes to identity enforcement rules. Therefore, Option A is the correct and

verified answer.

NEW QUESTION # 47

An account without a phone number, operating system, or role of CEO would typically be defined as:

- A. Corporate
- **B. Programmatic**
- C. Enterprise
- D. Human

Answer: B

Explanation:

Falcon Identity Protection classifies accounts based on observed authentication behavior and associated identity attributes, not solely on naming conventions. According to the CCIS curriculum, programmatic accounts (such as service accounts or application accounts) typically lack human-centric attributes like a phone number, assigned operating system, job title, or executive role (for example, CEO).

Human accounts generally have enriched identity context sourced from directory services and identity providers, including user profile details, interactive login behavior, and endpoint associations. In contrast, programmatic accounts authenticate non-interactively, often on predictable schedules, and do not require personal attributes to function.

Falcon analyzes authentication traffic to automatically identify these characteristics and classify the account accordingly. An account missing human identity signals—such as a phone number or endpoint ownership—strongly aligns with programmatic behavior.

Because the absence of personal attributes and interactive context is a defining indicator of a programmatic account, Option A is the correct and verified answer.

NEW QUESTION # 48

.....

When you're in pain, it is best to learn things. Learning will make you invincible. ItPass4sure CrowdStrike IDP Exam Training materials can also help you to be invincible. With this training materials, you will receive the CrowdStrike IDP certification which recognized and accepted internationally. Then all of your life, including money and position, will improve a lot. Until then, will you still feel painful? No, you will be very happy. You should thanks itPass4sure which provide you with a good training materials. It can help you when you lost, and let you not only improve your own quality, but also demonstrate the value of your perfect life.
