Nowadays, online shopping has been greatly developed, but because of the fear of some uncontrollable problems after payment, there are still many people don't trust to buy things online, especially electronic products. But you don't have to worry about this when buying our Professional-Cloud-Developer Study Materials. Not only will we fully consider for customers before and during the purchase, but we will also provide you with warm and thoughtful service after payment. We have a special technical customer service staff to solve all kinds of consumers' problems.

To pass the Google Professional-Cloud-Developer certification exam, candidates must demonstrate their knowledge of topics such as cloud architecture, application development, deployment, and monitoring. They must also have experience working with common development tools and languages, such as Java, Python, and Node.js. Additionally, candidates should be familiar with GCP services such as Compute Engine, App Engine, Kubernetes Engine, and Cloud Functions.

Google Professional-Cloud-Developer certification is a valuable credential for developers who want to demonstrate their expertise in cloud application development using Google Cloud Platform. Google Certified Professional - Cloud Developer certification validates the candidate's skills and knowledge in this area and can increase their earning potential and open up new career opportunities. Professional-Cloud-Developer Exam is designed for developers with at least three years of experience in software development and at least one year of experience working with Google Cloud Platform.

## Google Certified Professional - Cloud Developer Sample Questions (Q203-Q208):

### NEW QUESTION # 203

You have a container deployed on Google Kubernetes Engine. The container can sometimes be slow to launch, so you have implemented a liveness probe. You notice that the liveness probe occasionally fails on launch. What should you do?

- A. Increase the CPU limit for the container.
- B. Add a readiness probe.
- C. Increase the initial delay for the liveness probe.
- D. Add a startup probe.

**Answer: C**

Explanation:

<https://kubernetes.io/docs/tasks/configure-pod-container/configure-liveness-readiness-startup-probes/#configure-probes>

### NEW QUESTION # 204

Your teammate has asked you to review the code below. Its purpose is to efficiently add a large number of small rows to a BigQuery table.

```
BigQuery service = BigQueryOptions.newBuilder().build().getService();

public void writeToBigQuery(Collection<Map<String, String>> rows){
    for(Map<String, String> row : rows) {
        InsertAllRequest insertRequest = InsertAllRequest.newBuilder(
            "datasetId", "tableId",
            InsertAllRequest.RowToInsert.of(row)).build();
        service.insertAll(insertRequest);
    }
}
```

Which improvement should you suggest your teammate make?

- A. Write each row to a Cloud Storage object, then load into BigQuery.
- B. Include multiple rows with each request.
- C. Perform the inserts in parallel by creating multiple threads.
- D. Write each row to a Cloud Storage object in parallel, then load into BigQuery.

**Answer: C**

### NEW QUESTION # 205

Your company has created an application that uploads a report to a Cloud Storage bucket. When the report is uploaded to the bucket, you want to publish a message to a Cloud Pub/Sub topic. You want to implement a solution that will take a small amount of effort to implement.

What should you do?

- A. Create an App Engine application to receive the file; when it is received, publish a message to the Cloud Pub/Sub topic.

- **B. Create a Cloud Function that is triggered by the Cloud Storage bucket. In the Cloud Function, publish a message to the Cloud Pub/Sub topic.**
- C. Configure the Cloud Storage bucket to trigger Cloud Pub/Sub notifications when objects are modified.
- D. Create an application deployed in a Google Kubernetes Engine cluster to receive the file; when it is received, publish a message to the Cloud Pub/Sub topic.

**Answer: B**

Explanation:

Explanation/Reference: <https://cloud.google.com/storage/docs/pubsub-notifications>

#### NEW QUESTION # 206

Your team is developing an ecommerce platform for your company. Users will log in to the website and add items to their shopping cart. Users will be automatically logged out after 30 minutes of inactivity. When users log back in, their shopping cart should be saved. How should you store users' session and shopping cart information while following Google-recommended best practices?

- A. Store the session and shopping cart information in a MySQL database running on multiple Compute Engine instances.
- **B. Store the session information in Memorystore for Redis or Memorystore for Memcached, and store the shopping cart information in Firestore.**
- C. Store the shopping cart information in a file on Cloud Storage where the filename is the SESSION ID.
- D. Store the session information in Pub/Sub, and store the shopping cart information in Cloud SQL.

**Answer: B**

Explanation:

<https://cloud.google.com/memorystore/docs/redis/redis-overview>

#### NEW QUESTION # 207

You are using Cloud Build to create a new Docker image on each source code commit to a Cloud Source Repositories repository. Your application is built on every commit to the master branch. You want to release specific commits made to the master branch in an automated method. What should you do?

- **A. Create a build trigger on a Git branch name pattern. Use a Git branch naming convention for new releases.**
- B. Manually trigger the build for new releases.
- C. Commit your source code to a second Cloud Source Repositories repository with a second Cloud Build trigger. Use this repository for new releases only.
- D. Create a build trigger on a Git tag pattern. Use a Git tag convention for new releases.

**Answer: A**

Explanation:

Reference:
