

# Test NCP-US-6.5 Free | Test NCP-US-6.5 Vce Free

2026 Latest PassTorrent NCP-US-6.5 PDF Dumps and NCP-US-6.5 Exam Engine Free Share: [https://drive.google.com/open?id=1D-QCndsrBYBzc\\_EI0kIM0pp9rr8cbaf](https://drive.google.com/open?id=1D-QCndsrBYBzc_EI0kIM0pp9rr8cbaf)

It is very important for us to keep pace with the changeable world and update our knowledge if we want to get a good job, a higher standard of life and so on. First, we need to get a good NCP-US-6.5 quiz prep. Because we only pass NCP-US-6.5 exam and get a certificate, we can have the chance to get a decent job and make more money. But there are question is that how you can pass the NCP-US-6.5 Exam and get a certificate. The best answer is to download and learn our NCP-US-6.5 quiz torrent. Our products will help you get what you want in a short time.

## Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> <li>Identify the steps to deploy Nutanix Files</li> <li>Given a scenario, determine product and sizing parameters</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Configure and Utilize Nutanix Unified Storage</li> <li>Identify the steps to deploy Nutanix Objects</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Utilize File Analytics for data security</li> <li>Troubleshoot Nutanix Unified Storage</li> <li>Configure Nutanix Volumes</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Troubleshoot issues related to Nutanix Objects</li> <li>Troubleshoot issues related to Nutanix Volumes</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Troubleshoot issues related to Nutanix Files</li> <li>Explain Data Management processes for Files and Objects</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Deploy and Upgrade Nutanix Unified Storage</li> <li>Perform upgrades</li> <li>maintenance for Files</li> <li>Objects implementations</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>Given a scenario, configure shares, buckets, and</li> <li>or Volume Groups</li> <li>Troubleshoot a failed upgrade for Files</li> <li>Objects</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>Analyze and Monitor Nutanix Unified Storage</li> <li>Describe the use of Data Lens for data security</li> </ul>

## Test NCP-US-6.5 Vce Free & Valid Test NCP-US-6.5 Bootcamp

It's no exaggeration to say that it only takes you 20 to 30 hours with NCP-US-6.5 practice quiz before exam. Past practice has proven that we can guarantee a high pass rate of 98% to 100% due to the advantage of high-quality. If you are skeptical about this, you can download a free trial of the version to experience our NCP-US-6.5 Training Material. You can try any version of our NCP-US-6.5 exam dumps as your favor, and the content of all three version is the same, only the display differs.

## Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q28-Q33):

### NEW QUESTION # 28

What are the limitations for enabling Self-Service Restore (SSR) in a File Server? (Choose two.)

- A. SSR for SMB does not restore streams or attributes in directories.
- B. SSR does not support NFS shares.**
- C. SSR is not supported at the root of distributed shares or exports.**
- D. SSR does not support SMB shares.

**Answer: B,C**

Explanation:

Self-Service Restore (SSR) in Nutanix Files, part of Nutanix Unified Storage (NUS), allows users to recover previous versions of files without administrator intervention. SSR is primarily designed for SMB shares, and it has specific limitations that restrict its functionality in certain scenarios.

Analysis of Options:

\* Option A (SSR is not supported at the root of distributed shares or exports): Correct. According to Nutanix documentation, SSR

cannot be enabled at the root level of distributed shares or exports.

Distributed shares in Nutanix Files are those that span multiple FSVMs for scalability, and the root of such shares does not support SSR due to the complexity of managing snapshots at that level.

\* Option B (SSR for SMB does not restore streams or attributes in directories): Incorrect. While SSR has limitations, this specific restriction is not documented in Nutanix Files documentation. SSR for SMB does restore file data and metadata, including attributes, though it may not support all advanced features like alternate data streams in some cases. However, this is not a primary limitation highlighted in the official documentation.

\* Option C (SSR does not support NFS shares): Correct. SSR is designed for SMB shares and relies on Windows Shadow Copy (VSS) integration to provide Previous Versions functionality. NFS shares do not support SSR, as NFS lacks a native equivalent to VSS for user-driven restores.

\* Option D (SSR does not support SMB shares): Incorrect. This is the opposite of the truth-SSR is specifically designed for SMB shares and is not supported for NFS shares, as noted in option C.

Selected Limitations:

\* A: SSR's inability to function at the root of distributed shares or exports is a documented limitation, as it affects how snapshots are managed in distributed environments.

\* C: SSR's lack of support for NFS shares is a fundamental limitation, as SSR relies on SMB-specific features.

Exact Extract from Nutanix Documentation:

From the Nutanix Files Administration Guide (available on the Nutanix Portal):

"Self-Service Restore (SSR) is supported only for SMB shares and is not available for NFS shares or exports.

Additionally, SSR cannot be enabled at the root of distributed shares or exports due to limitations in snapshot management at the root level."

:

Nutanix Files Administration Guide, Version 4.0, Section: "Self-Service Restore Limitations" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Files Self- Service Restore".

## NEW QUESTION # 29

An administrator sees that the Cluster drop-down or the Subnets drop-down shows empty lists or an error message when no Prism Element clusters or subnets are available for deployment, respectively. Additionally, the administrator sees that no Prism Element clusters are listed during the addition of multi-cluster to the Object Store. What would cause the Prism Element clusters or subnets to not appear in the user interface?

- A. The logged-in user does not have access to any subnets on the allowed Prism Central.
- B. The administrator has just created an access policy granting user access to Prism Element.
- C. The administrator has just created an access policy denying user access to a subnet in Prism Element.
- D. **The logged-in user does not have access to any Prism Central.**

### Answer: D

Explanation:

Nutanix Objects, part of Nutanix Unified Storage (NUS), is deployed and managed through Prism Central (PC), which provides a centralized interface for managing multiple Prism Element (PE) clusters. When deploying Objects or adding multi-cluster support to an Object Store, the administrator selects a PE cluster and associated subnets from drop-down lists in the Prism Central UI. If these drop-down lists are empty or show an error, it indicates an issue with visibility or access to the clusters or subnets.

Analysis of Options:

\* Option A (The logged-in user does not have access to any Prism Central): Correct. Prism Central is required to manage Nutanix Objects deployments and multi-cluster configurations. If the logged-in user does not have access to any Prism Central instance (e.g., due to RBAC restrictions or no PC being deployed), they cannot see any PE clusters or subnets in the UI, as Prism Central is the interface that aggregates this information. This would result in empty drop-down lists for clusters and subnets, as well as during multi-cluster addition for the Object Store.

\* Option B (The logged-in user does not have access to any subnets on the allowed Prism Central):

Incorrect. While subnet access restrictions could prevent subnets from appearing in the Subnets drop- down, this does not explain why the Cluster drop-down is empty or why no clusters are listed during multi-cluster addition. The issue is broader-like related to Prism Central access itself-rather than subnet-specific permissions.

\* Option C (The administrator has just created an access policy granting user access to Prism Element): Incorrect. Granting access to Prism Element directly does not affect visibility in Prism Central's UI. Objects deployment and multi-cluster management are performed through Prism Central, not Prism Element. Even if the user has PE access, they need PC access to see clusters and subnets in the Objects deployment workflow.

\* Option D (The administrator has just created an access policy denying user access to a subnet in Prism Element): Incorrect.

Denying access to a subnet in Prism Element might affect subnet visibility in the Subnets drop-down, but it does not explain the empty Cluster drop-down or the inability to see clusters during multi-cluster addition. Subnet access policies are secondary to the

broader issue of Prism Central access.

Why Option A?

The core issue is that Prism Central is required to display PE clusters and subnets in the UI for Objects deployment and multi-cluster management. If the logged-in user does not have access to any Prism Central instance (e.g., they are not assigned the necessary role, such as Prism Central Admin, or no PC is registered), the UI cannot display any clusters or subnets, resulting in empty drop-down lists. This also explains why no clusters are listed during multi-cluster addition for the Object Store, as Prism Central is the central management point for such operations.

Exact Extract from Nutanix Documentation:

From the Nutanix Objects Deployment Guide (available on the Nutanix Portal):

"Nutanix Objects deployment and multi-cluster management are performed through Prism Central. The logged-in user must have access to Prism Central with appropriate permissions (e.g., Prism Central Admin role) to view Prism Element clusters and subnets in the deployment UI. If the user does not have access to Prism Central, the Cluster and Subnets drop-down lists will be empty, and multi-cluster addition will fail to list available clusters."

:

Nutanix Objects Deployment Guide, Version 4.0, Section: "Prism Central Requirements for Objects Deployment" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Objects Multi- Cluster Management".

### NEW QUESTION # 30

An administrator has connected 100 users to multiple Files shares to perform read and write activity. The administrator needs to view audit trails in File Analytics of these 100 users. From which two Audit Trail options can the administrator choose to satisfy this task? (Choose two.)

- A. Share Name
- B. Client IP
- C. Directory
- D. Folders

**Answer: A,B**

Explanation:

Nutanix File Analytics, part of Nutanix Unified Storage (NUS), provides audit trails to track user activities within Nutanix Files shares. Audit trails include details such as who accessed a file, from where, and what actions were performed. The administrator needs to view the audit trails for 100 users, which requires filtering or grouping the audit data by relevant criteria.

Analysis of Options:

\* Option A (Share Name): Correct. Audit trails in File Analytics can be filtered by Share Name, allowing the administrator to view activities specific to a particular share. Since the 100 users are connected to multiple shares, filtering by Share Name helps narrow down the audit trails to the shares being accessed by these users, making it easier to analyze their activities.

\* Option B (Client IP): Correct. File Analytics audit trails include the Client IP address from which a user accesses a share (as noted in Question 14). Filtering by Client IP allows the administrator to track the activities of users based on their IP addresses, which can be useful if the 100 users are accessing shares from known IPs, helping to identify their read/write activities.

\* Option C (Directory): Incorrect. While audit trails track file and directory-level operations,

"Directory" is not a standard filter option in File Analytics audit trails. The audit trails can show activities within directories, but the primary filtering options are more granular (e.g., by file) or higher- level (e.g., by share).

\* Option D (Folders): Incorrect. Similar to "Directory," "Folders" is not a standard filter option in File Analytics audit trails. While folder-level activities are logged, the audit trails are typically filtered by Share Name, Client IP, or specific files, not by a generic "Folders" category.

Selected Options:

\* A: Filtering by Share Name allows the administrator to focus on the specific shares accessed by the 100 users.

\* B: Filtering by Client IP enables tracking user activities based on their IP addresses, which is useful for identifying the 100 users' actions across multiple shares.

Exact Extract from Nutanix Documentation:

From the Nutanix File Analytics Administration Guide (available on the Nutanix Portal):

"File Analytics Audit Trails allow administrators to filter user activities by various criteria, including Share Name and Client IP.

Filtering by Share Name enables viewing activities on a specific share, while filtering by Client IP helps track user actions based on their source IP address."

:

Nutanix File Analytics Administration Guide, Version 4.0, Section: "Using Audit Trails in File Analytics" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix File Analytics Audit Features".

## NEW QUESTION # 31

Which protocols are supported by Files?

- A. SMBv2 SMBv3, NFSv2, NFSv3
- B. **SMBv2 SMBv3, NFSv3, NFSv4**
- C. SMBv1. SMBv2, NFSv3, NFSv4
- D. SMBv1. SMBv2, NFSv2, NFSv3

**Answer: B**

Explanation:

The protocols that are supported by Files are SMBv2, SMBv3, NFSv3, and NFSv4. SMB (Server Message Block) is a protocol that allows clients to access files, printers, and other resources on a network. NFS (Network File System) is a protocol that allows clients to access files on a remote server as if they were local.

Files supports both SMB and NFS protocols for creating shares and exports that can be accessed by different types of clients.

References: Nutanix Files Administration Guide, page 31; Nutanix Files Solution Guide, page 6

## NEW QUESTION # 32

The Administrator needs to review the following graphs, as displayed in the exhibit.

- \* Storage Used
- \* Open Connections
- \* Number of Files
- \* Top Shares by Current Capacity
- \* Top Shares by current Connections

Where should the administrator complete this action?

- A. Files Console Data Management View
- B. **Files Console Dashboard View**
- C. Files Console Share View
- D. Files Console Monitoring View

**Answer: B**

Explanation:

The Files Console Dashboard View provides an overview of the Files cluster performance and usage, including the following graphs:

Storage Used: Shows the total storage used by the Files cluster, including data, metadata, and snapshots.

Open Connections: Shows the number of active SMB and NFS connections to the Files cluster.

Number of Files: Shows the number of files stored in the Files cluster, excluding snapshots.

Top Shares by Current Capacity: Shows the top five shares by current capacity usage in the Files cluster.

Top Shares by Current Connections: Shows the top five shares by current connection count in the Files cluster. Reference: Nutanix Files Administration Guide2

## NEW QUESTION # 33

.....

Our PDF version of our NCP-US-6.5 exam practice guide is convenient for the clients to read and supports the printing. If the clients use our PDF version they can read the PDF form conveniently and take notes. The NCP-US-6.5 quiz prep can be printed onto the papers. If the clients need to take note of the important information they need they can write them on the papers to be convenient for reading or print them on the papers. The clients can read our NCP-US-6.5 Study Materials in the form of PDF or on the printed papers. Thus the clients learn at any time and in any place and practice the NCP-US-6.5 exam practice guide repeatedly.
