Microsoft AI-901 Exam Questions With Free Updates At 25% Discount

It never needs an internet connection. Actual4Labs's Microsoft Azure AI Fundamentals practice exam software has several mock exams, designed just like the real exam. Microsoft AI-901 practice exam software contains all the important questions which have a greater chance of appearing in the final exam. Actual4Labs always tries to ensure that you are provided with the most updated Microsoft Azure AI Fundamentals (AI-901) Exam Questions to pass the exam on the first attempt.

Microsoft AI-901 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Implement AI solutions by using Microsoft Foundry: This domain is hands-on and focuses on building and deploying AI solutions using the Microsoft Foundry platform and its associated tools. It spans generative AI apps, text and speech processing, computer vision, and document intelligence all implemented through the Foundry portal and SDK.
Topic 2	<ul style="list-style-type: none">Identify AI concepts and capabilities: This domain covers the foundational knowledge of AI from ethical principles and responsible design to understanding how AI models work and what kinds of tasks they can perform. It also explores the full range of AI workloads including generative AI, computer vision, speech, and information extraction.

Microsoft Azure AI Fundamentals Sample Questions (Q22-Q27):

NEW QUESTION # 22

Your company processes customer support emails.

You need to implement an AI solution that automatically identifies mentions of people, organizations, and locations in the emails.

Which text analysis technique should you use?

- A. Named Entity Recognition (NER)
- B. sentiment analysis
- C. summarization
- D. key phrase extraction

Answer: A

Explanation:

The correct text analysis technique is Named Entity Recognition (NER).

Microsoft defines NER as a feature that identifies and categorizes entities in unstructured text, including people, places, and organizations.

Sentiment analysis detects positive, negative, or neutral opinion. Summarization creates shorter versions of text. Key phrase extraction identifies important phrases, but it does not specifically classify mentions as people, organizations, or locations.

NEW QUESTION # 23

You are developing an application that processes voicemail recordings by using Azure Content Understanding in Foundry Tools.

Which feature does Azure Content Understanding use to convert audio to text?

- A. optical character recognition (OCR)
- B. transcription
- C. Voice Live
- D. key phrase extraction

Answer: B

Explanation:

Azure Content Understanding uses transcription to convert audio content, such as voicemail recordings, into text. Microsoft's Azure Content Understanding audio documentation states that transcription converts conversational audio into searchable and analyzable text-based transcripts.

Option A. Voice Live is not the feature used by Content Understanding to convert voicemail recordings into text.

Option B. key phrase extraction identifies important phrases after text is available; it is not the audio-to-text conversion step.

Option D. optical character recognition (OCR) is for extracting text from images or documents, not audio.

Therefore, the correct answer is C. transcription.

NEW QUESTION # 24

Hotspot Question

Select the answer that correctly complete the sentence.

Answer Area

Information extraction solutions that detect and read text in scanned documents and images rely on

Microsoft

computer vision
image generation
sentiment analysis
speech synthesis

Answer:

Explanation:

Answer Area

Optical character recognition (OCR)-only processing
A schema
A synchronous API call

Microsoft

NEW QUESTION # 26

Hotspot Question

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements

In the Foundry playground, you can upload a local image and include text in the same message when prompting a multimodal model.

When using the OpenAI Responses API and a vision-enabled model, images can be provided only as base64-encoded image data.

Prompts that include images require deploying a text-only model because multimodal capabilities are handled by the application layer.

Yes No

Microsoft
