ISACA Certified in the Governance of Enterprise IT Exam Sample Questions

(Q84-Q89):

NEW QUESTION # 84

CORRECT TEXT

Fill in the blank with the appropriate word. An _____ is a resource, process, product, computing infrastructure, and so forth that an organization has determined must be protected.

Answer:

Explanation:
asset

NEW QUESTION # 85

Which of the following is the BEST indication that information security requirements are taken into consideration when developing IT processes?

- A. The information architecture incorporates data classification
- B. The integrity of sensitive information is periodically reviewed
- C. The database is deployed in a distributed processing platform
- D. Customer profiles are stored with a domestic service provider

Answer: A

Explanation:

Data classification is a process of organizing and categorizing data based on its characteristics, confidentiality, and sensitivity. Data classification helps to determine the level of access and protection that data requires. Data classification also makes data easier to understand, compare, and analyze. Data classification is an essential part of information security, as it helps to align the security measures and policies with the data's value and risk. By incorporating data classification into the information architecture, the IT processes can ensure that information security requirements are taken into consideration from the design stage to the implementation stage. NEW QUESTION # 86

In which of the following editions of COBIT was "Management Guidelines" added?

- A. The second edition
- B. The third edition
- C. The first edition
- D. The fourth edition

Answer: A

Explanation:
Section: Volume C

NEW QUESTION # 87

The board of a start-up company has directed the CIO to develop a technology resource acquisition and management policy. Which of the following should be the MOST important consideration during the development of this policy?

- A. Organizational knowledge retention
- B. Enterprise growth plans
- C. Industry best practices
- D. IT staff competencies

Answer: B

Explanation:

Enterprise growth plans should be the most important consideration during the development of a technology resource acquisition and management policy, because they define the vision, goals, and strategies of the start-up company and how technology can support them. A technology resource acquisition and management policy should align with the enterprise growth plans and ensure that the technology resources are acquired and managed in a way that enables the company to achieve its desired outcomes, such as increasing market share, enhancing customer satisfaction, improving operational efficiency, or creating innovative products or services. A technology resource acquisition and management policy should also consider the scalability, flexibility, and adaptability of the technology resources to accommodate the changing needs and demands of the company as it grows and evolves. A technology resource acquisition and management policy should also balance the costs and benefits of acquiring and managing technology resources and ensure that they deliver value to the company and its stakeholders.

NEW QUESTION # 88

Which of the following is the GREATEST impact to an enterprise that has ineffective information architecture?

- A. Data retention
- B. Poor desktop service delivery
- C. Poor business decisions
- D. Redundant systems

Answer: C
