## Appian ACD201 PDF Questions - Ensure Your Success In Exam

Boring life will wear down your passion for life. It is time for you to make changes. Our ACD201 study materials are specially prepared for you. In addition, learning is becoming popular among all age groups. After you purchase our ACD201 study materials, you can make the best use of your spare time to update your knowledge. When your life is filled with enriching yourself, you will feel satisfied with your good change. Our ACD201 Study Materials are designed to stimulate your interest in learning so that you learn in happiness.

### Appian Senior Developer Sample Questions (Q16-Q21):

#### NEW QUESTION # 16

You're reviewing the data store performance logs. You notice several items were logged in the generated slow query log file: `perf_monitor_rdbms_slow.csv`.

What is the default threshold value for a slow query to be included in this log file?

- A. 7 sec
- B. 5 sec
- C. 3 sec

**Answer: C**

Explanation:

The default threshold value for a slow query to be included in the `perf_monitor_rdbms_slow.csv` log file is 3 seconds.

#### NEW QUESTION # 17

You need to assign a user input task to three different groups of users: Group A, Group B, and Group C.

Each task form shares some common components with the following key differences:

Group B will receive a task that includes an additional section.

Group C will only view and enter data for one section.

What should you do?

- A. Configure the version setting on the user input task node to conditionally display the correct form
- B. Within the process model, utilize an XOR gateway to conditionally select between the three different user input tasks.
- C. Utilize conditional logic on the form along with the `showWhen` parameter for interface components.

**Answer: C**

Explanation:

Using conditional logic with the `showWhen` parameter on the form allows you to display or hide specific sections for each group within a single user input task, making the solution flexible and maintainable.

#### NEW QUESTION # 18

You're the administrator of your insurance company's case management system. You need to limit insurance agents to only those clients to which they have been assigned.

Which two statements must be true for one way to configure Record-Level security for the Customer record?

(Choose two.)

- A. A condition should be added to the record-level security rule to specify which cases specifically named agents can access.
- B. A new record-level security rule should be created using the Users found in fields option to specify that if a user is found in the "assignedAgent" field (which is a type User), then they can see their cases.
- C. Data sync should be enabled.
- D. Record-level security means agents must have permission to view the record type and permission to edit the records.

**Answer: A,B**

Explanation:

Creating a record-level security rule using the "Users found in fields" option ensures agents only see records assigned to them through the "assignedAgent" field.

Adding a condition to the rule further refines which records (cases) each agent can access, implementing precise record-level security.

### **NEW QUESTION # 19**

You need to create an expression rule that will be reused throughout your environment.

What are two reasons why you should include meaningful test cases when creating a new expression rule?

(Choose two.)

- A. To improve the performance of the environment.
- B. To accelerate various types of testing, including: unit, regression, exploratory.
- C. To enhance the appearance of the code.
- D. To facilitate Test-Driven Development.

**Answer: B,D**

Explanation:

Meaningful test cases accelerate different testing types by providing clear validation scenarios for the rule.

They support Test-Driven Development by enabling you to define expected outcomes before or during rule creation.

### **NEW QUESTION # 20**

You need to create a web API so that an external system can start a process in your app.

Which two statements are true about using a service account to authenticate the system? (Choose two.)

- A. The service account must be a user in the Service Accounts group.
- B. The service account must be granted access to that web API via group management.
- C. The service account is created as any other object in Appian.
- D. The service account must be configured from within the web API object.

**Answer: A,B**

Explanation:

The service account must be granted access to the web API, typically via group management, to allow authenticated calls.

The service account must be a user in the Service Accounts group to be used for authentication in integrations such as web APIs.

### **NEW QUESTION # 21**

.....

Eliminates confusion while taking the Appian Senior Developer exam. Prepares you for the format of your ACD201 exam dumps, including multiple-choice questions and fill-in-the-blank answers. Comprehensive, up-to-date coverage of the entire ACD201 curriculum. ACD201 practice questions are based on recently released ACD201 Exam Objectives. Includes a user-friendly interface allowing you to take the ACD201 practice exam on your computers, like downloading the PDF, Web-Based ACD201 practice test DumpsActual, and Desktop ACD201 practice exam.
