

# ISQI CTFL-AcT Web-Based Practice Exam for Online Self-Assessment

As you know, the first-class quality always come with the first service. That is exactly what describe our CTFL-AcT exam materials. No only that our CTFL-AcT training guide can attract you for its best quality, but also you will be touched by the excellent service. If you have any question about our CTFL-AcT Learning Engine, our service will give you the most professional suggestion and help. And we work 24/7 online. So you can always find we are accompanying you.

## ISQI CTFL-AcT Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Business Process and Business Rules Modeling: Here, the focus is on modeling business processes and rules, and deriving acceptance tests directly from these models for streamlined testing processes.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Collaborative Acceptance Testing: This topic details how teams collaborate effectively during acceptance testing to ensure comprehensive test coverage and quality assurance.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Introduction and Foundations: This topic covers fundamental relationships in software development and business analysis, along with the principles of acceptance testing.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Acceptance Criteria, Acceptance Tests and Experience-Based Practices: This topic includes writing acceptance criteria, designing acceptance tests, and utilizing experience-based approaches for effective acceptance testing.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Acceptance Testing for Non-Functional Requirements: This topic explores testing non-functional requirements such as usability, performance efficiency, and security, emphasizing quality in use and user experience.</li></ul>

## Free PDF 2026 ISQI Newest CTFL-AcT: Reliable ISTQB Foundation Level - Acceptance Testing Exam Answers

Pass4guide is a wonderful study platform that contains our hearty wish for you to pass the exam by our CTFL-AcT exam materials. So our responsible behaviors are our instinct aim and tenet. By devoting in this area so many years, we are omnipotent to solve the problems about the CTFL-AcT learning questions with stalwart confidence. we can claim that only studying our CTFL-AcT study guide for 20 to 30 hours, then you will pass the exam for sure.

## ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q71-

## Q76):

### NEW QUESTION # 71

Which of the following statements corresponds BEST to a UX requirement analysis activity?

- A. Security requirements are derived from usage scenarios.
- B. Personas are used to analyze products or solutions from competitors.
- C. Environmental conditions such as light conditions are obtained from a task analysis.
- **D. User profiles are used to determine different levels of business knowledge.**

**Answer: D**

### NEW QUESTION # 72

Your company wants to establish a new human resources management application. As tester, you propose to use an ATDD approach and to use business process models for test case design.

Which of the following statements is the LEAST meaningful argument for this approach?

- **A. Business process models will make it easier to detect defects in the application code.**
- B. The process models will help testers to understand the use cases to be tested.
- C. As business process models will be updated to maintain the tests, they will be a living documentation of the product.
- D. Testers will be able to show test coverage directly within the graphical representation of business processes.

**Answer: A**

Explanation:

Acceptance Test-Driven Development (ATDD) involves early collaboration between stakeholders to define acceptance criteria and tests before development begins. Using business process models in ATDD helps visualize user behavior, align test cases with real workflows, and serve as living documentation.

Option C is the least meaningful argument because:

Business process models abstractly describe workflows and decisions at a business level. While they help clarify requirements and detect requirement-related defects, they do not directly support detecting defects in the application code, which is typically the focus of unit and integration testing, not acceptance testing.

Let's validate the other options:

A is a strong argument - process models clarify use cases for testers.

B is valid - graphical models help visualize test coverage directly.

D is true - as business process models evolve, they remain valuable artifacts aligned with current system behavior and requirements.

C). Business process models will make it easier to detect defects in the application code.

### NEW QUESTION # 73

Which one of the following statements describes the relation between business goals, business needs and requirements BEST?

- A. Business needs address the business solution whereas business requirements define the business problem or opportunity.
- B. Business goals and business needs are synonyms.
- **C. Business goals, business needs and requirements describe at different levels of abstraction, what shall be achieved.**
- D. To derive the business needs, the business analyst first has to understand the business goals and requirements.

**Answer: C**

### NEW QUESTION # 74

Which one of the following statements regarding ATDD / BDD is true?

- A. Behavior-Driven Development (BDD) considers acceptance test design as an activity to be handled by the test team after requirements have been finalized.
- B. In both Acceptance-Test Driven Development (ATDD) and Behavior-Driven Development (BDD), acceptance test cases are written by a test automation engineer as test automation code.
- C. In Acceptance-Test Driven Development (ATDD), test cases are written prior to the acceptance criteria.
- **D. In both Acceptance-Test Driven Development (ATDD) and Behavior-Driven Development (BDD), test cases provide**

examples of product use.

**Answer: D**

Explanation:

ATDD and BDD are agile development approaches that emphasize collaboration among stakeholders (such as business analysts, developers, testers, and customers) to define clear and testable acceptance criteria before or as requirements are being finalized.

Both techniques promote using concrete examples to drive development and validate understanding.

In ATDD, acceptance test cases are derived directly from user stories or requirements and written before the actual implementation starts. In BDD, scenarios are expressed in natural language (often using Gherkin syntax) to describe behaviors the system should exhibit under specific conditions. In both cases, these tests serve not only as validation tools but also as executable specifications - i.e., shared understanding expressed through concrete examples.

Option B is correct because both methodologies use examples (scenarios/test cases) to describe how a system should behave - serving as acceptance criteria.

Incorrect options:

Option A wrongly suggests BDD defers testing until after requirements are finalized - it actually promotes early collaboration.

Option C is false - in ATDD, test cases are based on predefined acceptance criteria, not written beforehand.

Option D is inaccurate - acceptance tests in ATDD and BDD may be automated but are collaboratively written first, not by test automation engineers alone.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 2.2):

"Both ATDD and BDD involve the collaborative definition of test cases before implementation to clarify requirements and serve as product usage examples."

#### NEW QUESTION # 75

Which one of the following statements describes correctly how acceptance testing may be augmented with other test techniques or approaches?

- A. In a risk-based testing approach, acceptance criteria are derived from the tester's experience and intuition.
- **B. In a model-based testing approach, acceptance tests are generated from graphical or textual models.**
- C. In a black-box testing approach, acceptance test scenarios follow the implemented sequence of function calls in the code.
- D. In a priority-based testing approach, prioritization of acceptance tests depends on identified product risks.

**Answer: B**

Explanation:

Model-Based Testing (MBT) is a test design technique in which test cases are derived from a model that describes some aspects of the system's behavior. In the context of acceptance testing, MBT can be used to generate high-level acceptance test cases automatically from business process models, use case diagrams, state models, or decision tables.

Option A is correct because MBT supports the systematic generation of acceptance test cases from these models, enabling better coverage of business rules and workflows while maintaining traceability to the requirements.

Other options:

B is close but slightly off: prioritization of acceptance tests in a priority-based approach depends on business value or stakeholder-defined priorities, not strictly on product risks.

C is incorrect. Risk-based testing relies on structured risk assessment, not just intuition or experience.

D is false. Black-box testing focuses on inputs and outputs without referencing the internal structure (such as function calls), which is characteristic of white-box testing.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 2.3):

"Model-based testing can be used to generate acceptance test cases systematically based on models representing business processes or system behavior."

#### NEW QUESTION # 76

.....

With the help of the CTFL-AcT practice exam questions and preparation material offered by Pass4guide, you can pass any CTFL-AcT certifications exam in the first attempt. You don't have to face any trouble, and you can simply choose to do a selective CTFL-AcT brain dumps to pass the exam. We offer guaranteed success with CTFL-AcT Questions on the first attempt, and you will be able to pass the CTFL-AcT exam in short time. You can always consult our CTFL-AcT certified professional support if you are facing any problems.
