

# Reliable Juniper JN0-253 Study Guide | JN0-253 Latest Material

What's more, part of that PracticeDump JN0-253 dumps now are free: [https://drive.google.com/open?id=1Yj\\_IPKfAfBZDCvCFUnTf58CytZJlj007](https://drive.google.com/open?id=1Yj_IPKfAfBZDCvCFUnTf58CytZJlj007)

We are intent on keeping up with the latest technologies and applying them to the JN0-253 exam questions and answers not only on the content but also on the displays. Our customers have benefited from the convenience of state-of-the-art. That is why our pass rate on JN0-253 practice quiz is high as 98% to 100%. The data are unique-particular in this career. With our JN0-253 exam torrent, you can enjoy the leisure study experience as well as pass the JN0-253 exam with success ensured.

## Juniper JN0-253 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Juniper Mist Cloud Operations: This domain covers three API types (RESTful, WebSocket, Webhook) for programmatic integration, plus support resources including ticketing systems and documentation.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Juniper Mist Network Operations and Management: This domain examines operational features across Wi-Fi, Wired, WAN, Routing, and Access Assurance, delivering specialized management capabilities for different network infrastructure layers.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Juniper Mist Monitoring and Analytics: This domain focuses on monitoring tools including service-level expectations, packet captures, AI-driven insights, automated alerts, and audit logs for comprehensive network visibility.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Location-based Services: This domain presents virtual Bluetooth Low Energy capabilities for asset tracking, visibility, and location-aware experiences that extend networking into physical space management.</li></ul>

## Juniper Reliable JN0-253 Study Guide Exam Latest Release | Updated JN0-253: Mist AI, Associate (JNCIA-MistAI)

We think of providing the best services of JN0-253 exam questions as our obligation. So we have patient after-sales staff offering help 24/7 and solve your problems all the way. Those considerate services are thoughtful for your purchase experience and as long as you need us, we will solve your problems. Our staff is suffer-able to your any questions related to our JN0-253 test guide. If you get any suspicions, we offer help 24/7 with enthusiasm and patience. Apart from our stupendous JN0-253 Latest Dumps, our after-sales services are also unquestionable. Your decision of the practice materials may affects the results you concerning most right now.

Good exam results are not accidents, but the results of careful preparation and high quality and accuracy materials like our JN0-253 practice materials.

## Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q33-Q38):

### NEW QUESTION # 33

Which two wired elements would be configured using an organization-level template? (Choose two.)

- A. DNS settings
- B. VLAN
- C. host name
- D. role

**Answer: A,B**

Explanation:

Two wired elements configured using an organization-level template in Juniper Mist are VLAN and DNS settings. Organization-level templates are designed to standardize and propagate common settings across all switches within an organization. As per official guides: "These templates can include VLANs and well-known services such as DNS (Domain Name System) that can be used across all devices within a site." VLAN and DNS settings are defined once at the organization (or switch group) template and automatically inherited by all devices, ensuring consistency. Host name and role are set at an individual switch level, not globally via templates.

### NEW QUESTION # 34

Which Mist supported API is considered data-driven?

- A. Webhook
- B. gRPC
- C. RESTful
- D. WebSocket

**Answer: C**

### NEW QUESTION # 35

Which two statements are true about Juniper Mist Wireless Assurance Radio Resource Management (RRM)? (Choose two.)

- A. RRM builds the channel plan based on a real-time assessment of the network.
- B. RRM tuning is a manual process that you must initiate every day.
- C. RRM tuning happens automatically.
- D. RRM builds the channel plan based on the physical distance between the APs.

**Answer: A,C**

Explanation:

Real-time Assessment: Juniper Mist's Radio Resource Management (RRM) builds the channel plan based on real-time network assessments. It dynamically adjusts to changing conditions in the RF environment, ensuring optimal performance by continuously monitoring factors such as interference, client distribution, and usage patterns. Automatic Tuning: RRM tuning happens automatically. Mist AI leverages reinforcement learning to continually optimize RF settings without manual intervention, adjusting channels, power levels, and other parameters in real-time to maintain optimal network performance.

### NEW QUESTION # 36

Which two statements are true about switch configurations at the site level? (Choose two.)

- A. Site-level switch configurations override org-level templates.
- B. Organizational-level templates override site-level switch configurations.
- C. Switch configurations at the site level are an additional way to apply a switch template to a specific site.

- D. Switch configurations at the site level are required to manually configure individual switches.

**Answer: A,C**

Explanation:

In the Juniper Mist Cloud architecture, configuration hierarchy and inheritance are key design principles for managing EX Series and QFX Series switches under Wired Assurance. Configuration settings can be applied at both the organization level and the site level, with clearly defined precedence rules.

According to the Juniper Mist Wired Assurance Configuration Guide, the organization level defines global configuration templates that apply across multiple sites, while the site level provides customization options specific to a particular location or environment.

The documentation states:

"Site-level configuration overrides any global or organizational template configurations for switches within that site." and further clarifies:

"Administrators can create or modify switch templates at the site level to apply custom settings to specific deployments without affecting other sites under the same organization." Thus:

\* Statement C is correct - site-level configurations are an additional method to apply templates for a specific site.

\* Statement D is correct - site-level configuration takes precedence over org-level templates.

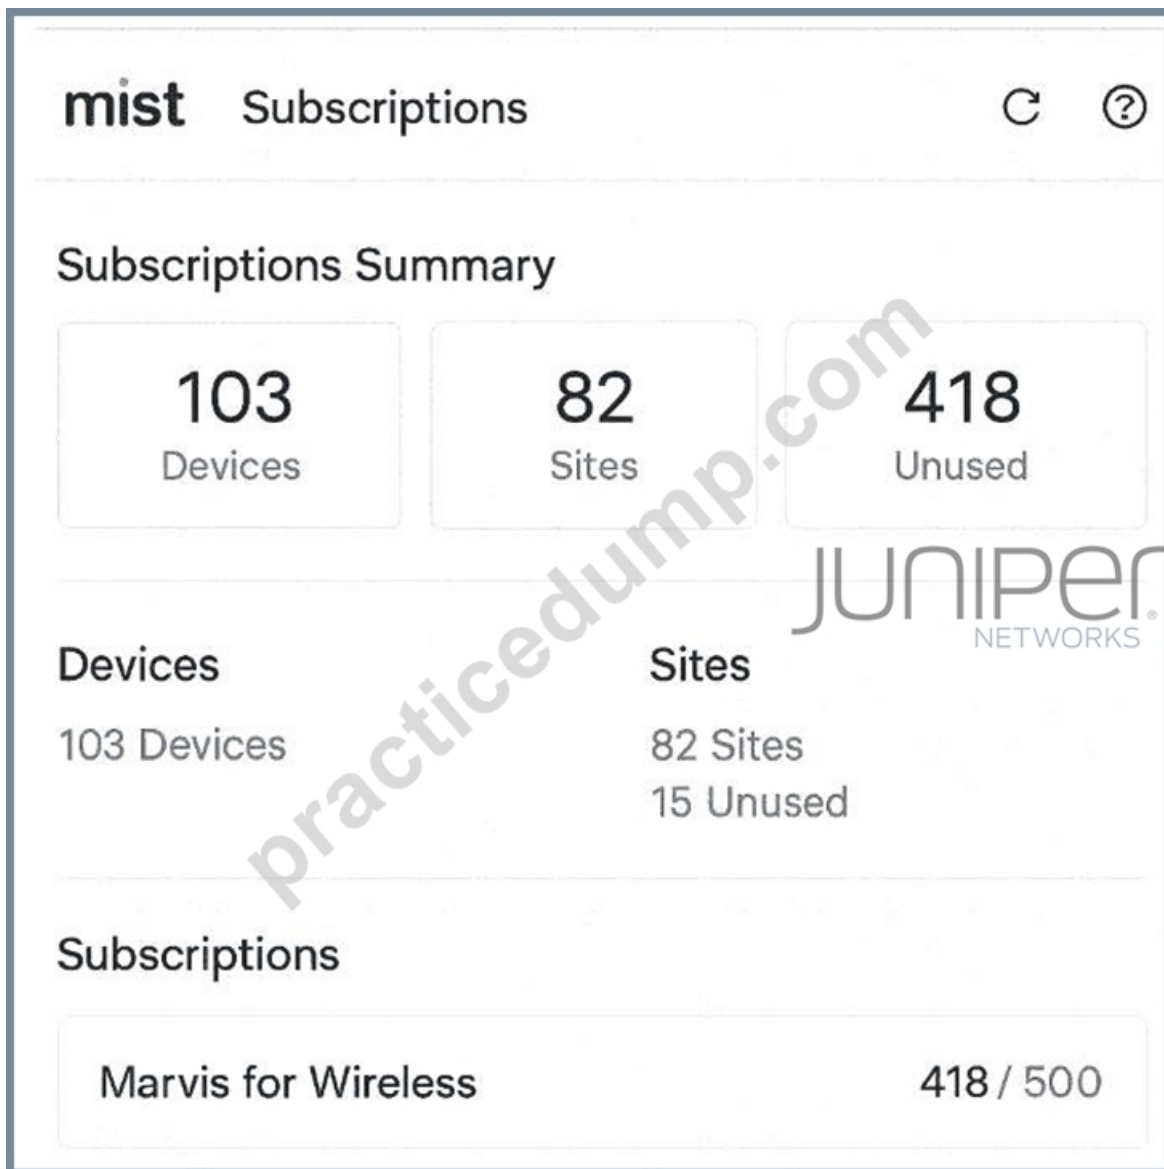

Statement A is incorrect because org-level templates do not override site-level configurations; the reverse is true.

Statement B is incorrect because site-level configuration is not required for manual switch setup - it is an optional, more efficient method of template application.

## **NEW QUESTION # 37**

Exhibit:

Referring to the exhibit, how many sites have unused Marvis for Wireless subscriptions?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:

In the Juniper Mist Cloud, the Subscriptions page provides administrators with detailed information about the status of service licenses and subscriptions associated with devices, sites, and organizations. This includes visibility into the number of active devices, sites, and any unused subscriptions across the organization.

According to the Juniper Mist Cloud Licensing and Subscription Management Guide, the "Sites" section under Subscriptions Summary shows:

"The total number of configured sites within the organization and the number of sites that currently do not have assigned subscriptions." In the exhibit, the summary shows:

\* 82 Sites total

\* 15 Unused sites

This indicates that 15 sites currently have no active or assigned Marvis for Wireless subscriptions. The

"Unused" label under Sites refers specifically to the count of sites not yet utilizing their allocated subscription entitlements.

Therefore, the correct answer is B. 15.
