### 最新的 CCNP Enterprise 350-401 免費考試真題 (Q156-Q161):

#### 問題 #156

Refer to the exhibit. Which action resolves the EtherChannel issue between SW2 and SW3?

- A. Configure switchport nonegotiate on SW3
- B. Configure switchport mode trunk on SW2.
- C. Configure channel-group 1 mode desirable on both interfaces.
- D. Configure channel-group 1 mode active on both interfaces.

答案： C

解題說明：

SW2 is running PAgP (Cisco Proprietary). "channel-group 1 mode desirable" enables PAgP.

"channel-group 1 mode active on" enables LACP. This also concludes that both switches are Cisco switches.

#### 問題 #157

Refer to the exhibit.

SwitchC connects HR and Sales to the Core switch However, business needs require that no traffic from the Finance VLAN traverse this switch Which command meets this requirement?

A)

B)

C)

D)

- A. Option B
- **B. Option D**
- C. Option C
- D. Option A

答案： B

#### 問題 #158

Refer to the exhibit.

VPN-A sends point-to-point traffic to VPN-B and receives traffic only from VPN-C VPN-B sends point-to-point traffic to VPN-C and receives traffic only from VPN-A Which configuration is applied?

- **A.**
- B.
- C.
- D.

答案： A

解題說明：

The correct configuration for the scenario described would involve setting up VPN-A to send traffic to VPN-B and receive from VPN-C, and VPN-B to send to VPN-C and receive from VPN-A. This can be achieved through proper routing and forwarding configurations using technologies such as MPLS L3VPNs, which allow for the segregation of different VPN traffic over a shared network infrastructure. The configuration would ensure that the correct paths are established for traffic flow between the VPNs as specified. References := The Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR) course provides a deep dive into Service Provider technologies including core architecture, services, networking, automation, quality of services, security, and network assurance. It covers topics such as MPLS VPNs, which are relevant to the question!

#### 問題 #159

Which statement about TLS is accurate when using RESTCONF to write configurations on network devices?

- A. It is used for HTTP and HTTPS requests
- B. It is not supported on Cisco devices
- C. It is provided using NGINX acting as a proxy web server
- **D. It requires certificates for authentication**

答案： D

解題說明：

Transport Layer Security (TLS) is a protocol that ensures privacy between communicating applications and their users on the Internet. When using RESTCONF, which is a protocol to write configurations on network devices, TLS provides a secure channel

by encrypting the communication. It requires certificates for authentication to establish a secure connection and ensure that the communication is between the intended devices.

References: The Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR) course materials cover the use of TLS with RESTCONF and the importance of certificates for secure authentication.

### 問題 #160

Refer to the exhibit. Which set of commands on router r R1 Allow deterministic translation of private hosts PC1, PC2, and PC3 to addresses in the public space?

□

- A. Option B
- B. Option D
- C. Option A
- D. Option C

答案： C
