## OmniStudio-Developer Reliable Test Forum - OmniStudio-Developer Valid Test Questions

To attempt the Salesforce OmniStudio-Developer exam optimally and ace it on the first attempt, proper exam planning is crucial. Since the Salesforce Certified OmniStudio Developer (OmniStudio-Developer) exam demands a lot of time and effort, we designed the Salesforce Certified OmniStudio Developer (OmniStudio-Developer) exam dumps in such a way that you won't have to go through sleepless study nights or disturb your schedule. Before starting the Salesforce Certified OmniStudio Developer (OmniStudio-Developer) preparation, plan the amount of time you will allot to each topic, determine the topics that demand more effort and prioritize the components that possess more weightage in the Salesforce Certified OmniStudio Developer (OmniStudio-Developer) exam.

Salesforce OmniStudio-Developer certification exam is a great option for Salesforce developers who want to validate their skills and knowledge in building and customizing applications using the OmniStudio platform. Salesforce Certified OmniStudio Developer certification exam covers various aspects of the development process, including design, development, deployment, and maintenance of applications. Passing the exam can provide developers with a competitive advantage in the job market and help them deliver quality work to their clients or organization.

Salesforce OmniStudio-Developer Certification Exam is a valuable credential for developers who want to demonstrate their expertise in the Salesforce platform and the OmniStudio suite of tools. Salesforce Certified OmniStudio Developer certification can help you stand out in a crowded job market, increase your earning potential, and open up new career opportunities. If you're a developer looking to take your skills to the next level, the Salesforce OmniStudio-Developer certification exam is definitely worth considering.

## Salesforce Certified OmniStudio Developer Sample Questions (Q94-Q99):

### NEW QUESTION # 94

A developer is configuring the API URL in an HTTP Action element within an Integration Procedure. What is the merge code syntax for passing a Date node from an element named SetValues in the URL?

- A. {{SetValues.Date}}
- B. t 'SetValues' ][ 'Date' ]
- C. %SetValues.Date%
- D. %SetValues: Date%

**Answer: C**

Explanation:

In OmniStudio Integration Procedures, when referencing data from a prior step in the HTTP Action URL, the correct merge code syntax is:

\* %ElementName.PropertyName%

So, referencing a value called Date from a step named SetValues must be written as:

\* %SetValues.Date%

This is the format recognized by the OmniStudio Merge Language (OML) for dynamic value substitution in URLs or headers.

Incorrect Options:

- \* A. Invalid syntax - not recognized by OmniStudio merge logic.
- \* B. {{SetValues.Date}} is used in FlexCards, not in Integration Procedures.
- \* D. %SetValues: Date% is incorrect merge syntax due to space and colon use.

:

Salesforce OmniStudio Documentation # Merge Code Syntax for Integration Procedures

### NEW QUESTION # 95

A developer is troubleshooting an Integration Procedure with two elements: A Remote Action named FetchCart and a Response Action named ResponseCart.

In Preview, what JSON node shows the data sent to the Response Action?

- A. Response
- B. FetchCart
- C. ResponseCartDebug
- D. ResponseCart

**Answer: D**

Explanation:

Explanation

In Preview, the JSON node that shows the data sent to the Response Action is the name of the Response Action itself. In this case, it is ResponseCart. The other nodes show either the input data or the output data of the Integration Procedure.

### NEW QUESTION # 96

An OmniScript displays data from an API using Integration Procedure, but some of the data is missing.

Which two configuration errors could cause this? Choose 2 answers

- A. The JSOW sent from the Integration Procedure Action does not match any of the Original Input for the Integration Procedure
- B. The missing data is trimmed in the Integration Procedure Action Response JSON Path.
- C. The Integration Procedure Preview Input Parameters do not match the JSON sent from the OmniScript.
- D. The element name for the missing data does not match the JSON node key in the Integration Procedure Response.

**Answer: A,D**

Explanation:

Explanation

The element name for the missing data must match the JSON node key in the Integration Procedure Response, otherwise the data

will not be mapped correctly. The JSON sent from the Integration Procedure Action must match one of the Original Input for the Integration Procedure, otherwise the Integration Procedure will not execute properly. The Integration Procedure Preview Input Parameters and the Response JSON Path have no effect on displaying data in OmniScript.

#### NEW QUESTION # 97

A developer is creating an OmniScript that Provisions trial orgs to their customers. The following text block in the OmniScript uses a merge code to display the ID for the new trial org:

Welcome to Salesforce

Your ID is %Details: Customer10:ID%

During testing, the developer notices that the ID does not display. The data JSON is structured as shown below.

How should the developer correct the merge code in order for the ID to display?

- A. To %%Details:Customer|1:ID%
- B. To \$Details:Customer|0:ID\$
- C. To %%Details:Customer|0:ID%%
- D. To %%Details:Customer|n:ID%

**Answer: A**

Explanation:

Explanation

The merge code syntax for accessing an array element is %%Details:Customer|1:ID%%, where 1 is the index of the element. The index starts from 1, not 0, so the first element is Customer|1. The % sign is used for single-value merge codes, not array merge codes. The \$ sign is used for variables, not merge codes.

#### NEW QUESTION # 98

```

"step1": {
  "block1": {
    "text1": "ext",
    "telephone1": "1234567890",
    "block2": {
      "checkbox": false
    }
  },
  "block3": {

```

• A.

```

"step1": {
  "block1": {
    "text1": "ext",
    "telephone1": "1234567890",
    "checkbox": false
  },
  "block3": {
    "multi-select1": "Value A;Value B"
  }
}

```

• B.

**Answer: A**

Explanation:  
Explanation

The correct answer is Option B, which shows a FlexCard with a header, a body, and a footer. The header contains the title and the icon of the FlexCard. The body contains a Data table element that displays the records from the parent FlexCard. The footer contains a navigation Action that invokes an OmniScript. Option A is incorrect because it shows a FlexCard with only a header and a body, and no footer.
