EMC Dell PowerScale Design v2 Exam Sample Questions (Q96-Q101):

NEW QUESTION # 96

What are typical use cases for SyncIQ and SmartSync? (Select all that apply)

- A. Automated WAN optimization for streaming data
- B. Inline data deduplication for file-level redundancy reduction
- C. Cross-site disaster recovery replication
- D. Data migration between clusters with minimal downtime

Answer: C,D

NEW QUESTION # 97

You have had several meetings with an existing EMC VMAX customer. They have agreed that they would like to review an initial Isilon Solution for unstructured data used by the Product Development Team. All production is managed through a Global Enterprise Resource Planning system based in Germany.

They require 600TiB of usable capacity. The File System must be accessible from Windows and Linux High-End Workstations. The files are generally not accessed after 120 days, and they would like automated tiering.

Which questions about architectural integration will impact the solution design?

- A. How many clients will access the File System? Will their VDI clients access the Isilon Cluster? What is the DR plan for the ERP System?
- B. What Enterprise Resource Planning platform are they using in manufacturing? What is their Recovery Point Objective? What is their Archival Strategy?
- C. How many data centers do they have? Will their Network Infrastructure support implementing Isilon? What Enterprise Resource Planning platform are they using in manufacturing?
- D. What non-sizing-specific factors in the customer's environment could impede integration of the Isilon solution? What applications are they using? What are your priorities among performance, scalability, or availability?

Answer: D

NEW QUESTION # 98

A large manufacturing company is an existing Isilon customer with a cluster consisting of four NL400 nodes with 4TB drives. The cluster is using N+2:1 protection level and the file system shows that it is 60% utilized. Home directories and file shares comprise 75% of the existing content and the remainder is inactive deep archive. The company has 1,000 employees using Windows and Mac clients participating in a single Active Directory (AD) forest.

During a meeting with the CIO and Director of IT you discuss the company's recent acquisition - an engineering firm that specializes in Computer Aided Design (CAD). The engineering firm has 400 UNIX workstations that produce technical drawings which are currently stored on another vendor's SAN solution. The all UNIX environment uses NIS for authentication and name resolution.

They do not currently use DNS or LDAP. The engineering company has an old storage system that has been experiencing problems and the CIO would like you to migrate the data onto the Isilon cluster. The CIO would like to eliminate all tape and recover the data onto disk.

The CIO is concerned about security of the company's intellectual property, especially with the rapid adoption of mobile devices and external cloud content sharing services such as DropBox, Egnyte, and SugarSync. They would like to implement an alternative that provides external file sharing and mobile device synchronization while maintaining security control over the company's data.

The Director of IT reports that users are storing non-work related content on the Isilon cluster. They would like to limit the amount of capacity that each user can consume in their home directory and want to ensure you provide the capability to easily visualize which users are over their allotment. The company's Windows users currently leverage Windows Shadow Copy to recover files that have been accidentally deleted. The IT department wants to ensure that Mac and incoming UNIX clients have the same functionality. The Director of IT also mentions that users are reporting slow response times when browsing their home directories and shared folders. They are concerned that Isilon cannot scale to support their combined requirements.

The customer provides the following environment summary from the engineering firm's recently departed IT staff: - 20 TB of Home Directory data - 100 TB of active CAD projects - 400 TB of archived data stored on tape at an offsite warehouse

Which configuration changes would you recommend for the Engineering users?

- A. Direct all clients to use the Manufacturing DNS server and connect NFS mounts to the FQDN of the Isilon cluster.
- B. Utilize SMB2.1 protocol and mount to the Isilon cluster using the Name Server (NS) record IP.
- C. Create an FQDN for the Isilon cluster in the LMHOSTS file for each engineering system.

- D. Mount an NFS share to a node on the Isilon cluster, being careful to equally distribute the load across nodes.

Answer: A

NEW QUESTION # 99

What are two SyncIQ performance rules that help manage resource usage during scheduled events?

- **A. Worker and CPU**
- B. Throughput and Redirector
- C. CPU and Redirector
- D. Worker and Throttler

Answer: A

NEW QUESTION # 100

The data access pattern on a PowerScale Gen6 cluster is set to Concurrency. Which description accurately defines this workload?

- A. Multiple clients accessing the same data with aggressive prefetching
- B. Single stream workflows with aggressive prefetching
- **C. Multiple clients accessing the same data with moderate prefetching**
- D. Multiple stream workflows with no prefetching

Answer: C
