If you are certainly determined to make something different in the field, a useful certification will be a stepping-stone for your career.

## **Salesforce Certified Identity and Access Management Architect Sample Questions (Q17-Q22):**

### **NEW QUESTION # 17**

Which two security risks can be mitigated by enabling Two-Factor Authentication (2FA) in Salesforce?

Choose 2 answers

- A. Users accessing Salesforce from a public Wi-Fi access point.
- B. Users creating simple-to-guess password reset questions.
- C. Users choosing passwords that are the same as their Facebook password.
- D. Users leaving laptops unattended and not logging out of Salesforce.

**Answer: A,C**

### **NEW QUESTION # 18**

Universal Containers is implementing Salesforce Identity to broker authentication from its enterprise single sign-on (SSO) solution through Salesforce to thirdparty applications using SAML.

What role does Salesforce Identity play in its relationship with the enterprise SSO system?

- A. Identity Provider (IdP)
- B. Service Provider (SP)
- C. Client Application
- D. Resource Server

**Answer: B**

Explanation:

To broker authentication from its enterprise SSO solution through Salesforce to third party applications using SAML, Salesforce Identity plays the role of a Service Provider (SP). A SP is an entity that relies on an Identity Provider (IdP) to authenticate and authorize users. In this scenario, the enterprise SSO solution is the IdP, Salesforce is the SP, and the third party applications are the Resource Servers or Client Applications. The SP receives a SAML assertion from the IdP and uses it to obtain an access token from the ResourceServer or Client Application. References: SAML Single Sign-On Settings, Authorize Apps with OAuth

### **NEW QUESTION # 19**

Universal Containers is using OpenID Connect to enable a connection from their new mobile app to its production Salesforce org. What should be done to enable the retrieval of the access token status for the OpenID Connect connection?

- A. A Leverage OpenID Connect Token Introspection.
- B. Query using OpenIDConnect discovery endpoint.
- C. Create a custom OAuth scope.
- D. Enable cross-origin resource sharing (CORS) for the /services/oauth2/token endpoint.

**Answer: A**

Explanation:

According to the Salesforce documentation<sup>1</sup>, OpenID Connect Token Introspection allows all OAuth connected apps to check the current state of an OAuth 2.0 access or refresh token. The resource server or connected apps send the client app's client ID and secret to the authorization server, initiating an OAuth authorization flow. As part of this flow, the authorization server validates, or introspects, the client app's access token. If the access token is current and valid, the client app is granted access.

### NEW QUESTION # 20

Northern Trail Outfitters (NTO) is launching a new sportswear brand on its existing consumer portal built on Salesforce Experience Cloud. As part of the launch, emails with promotional links will be sent to existing customers to log in and claim a discount. The marketing manager would like the portal dynamically branded so that users will be directed to the brand link they clicked on; otherwise, users will view a recognizable NTO-branded page.

The campaign is launching quickly, so there is no time to procure any additional licenses. However, the development team is available to apply any required changes to the portal.

Which approach should the identity architect recommend?

- A. Configure an additional community site on the same org that is dedicated for the new brand.
- B. Use Heroku to build the new brand site and embedded login to reuse identities.
- C. Create a full sandbox to replicate the portal site and update the branding accordingly.
- D. **Implement Experience ID in the code and extend the URLs and endpoints, as required.**

**Answer: D**

### NEW QUESTION # 21

Universal Containers is implementing a new Experience Cloud site and the identity architect wants to use dynamic branding features as of the login process.

Which two options should the identity architect recommend to support dynamic branding for the site?

Choose 2 answers

- A. An external content management system (CMS) must be used for dynamic branding on Experience Cloud sites.
- B. **To use dynamic branding, the community must be built with the Customer Account Portal template.**
- C. **An experience ID (expid) or placeholder parameter must be used in the URL to represent the brand.**
- D. To use dynamic branding, the community must be built with the Visualforce + Salesforce Tabs template.

**Answer: B,C**

Explanation:

Explanation

Dynamic branding is a feature that allows Experience Cloud sites to display different branding elements, such as logos, colors, or images, based on the user's profile or preferences. To use dynamic branding, the community must be built with the Customer Account Portal template, which supports this feature. An experience ID (expid) or placeholder parameter must be used in the URL to represent the brand and trigger the dynamic branding logic.
