

# New Associate-Cloud-Engineer Test Preparation | Relevant Associate-Cloud-Engineer Questions

2026 Latest Pass4suresVCE Associate-Cloud-Engineer PDF Dumps and Associate-Cloud-Engineer Exam Engine Free Share: <https://drive.google.com/open?id=17LZOFqEmaFtsCGGZMGEU91iOSDH579Oy>

Our world is in the state of constant change and evolving. If you want to keep pace of the time and continually transform and challenge yourself you must attend one kind of Associate-Cloud-Engineer certificate test to improve your practical ability and increase the quantity of your knowledge. Buying our Associate-Cloud-Engineer study practice guide can help you pass the test smoothly. Our Associate-Cloud-Engineer exam materials have gone through strict analysis and verification by senior experts and are ready to supplement new resources at any time.

Google Associate-Cloud-Engineer Exam is a certification exam that tests the knowledge and skills of an individual in deploying, monitoring, and maintaining projects on Google Cloud Platform. Associate-Cloud-Engineer exam is designed to test the candidate's ability to work with various cloud technologies and tools, including Google Cloud Console, Google Cloud SDK, and Google Cloud Shell, among others.

## Relevant Associate-Cloud-Engineer Questions | Pass4sure Associate-Cloud-Engineer Exam Prep

We can offer further help related with our Associate-Cloud-Engineer study engine which win us high admiration. By devoting in this area so many years, we are omnipotent to solve the problems about the Associate-Cloud-Engineer practice questions with stalwart confidence. Providing services 24/7 with patient and enthusiastic staff, they are willing to make your process more convenient. So, if I can be of any help to you in the future, please feel free to contact us at any time on our Associate-Cloud-Engineer Exam Braindumps.

Successful completion of the Google Associate-Cloud-Engineer Exam demonstrates that an individual has the knowledge and skills necessary to deploy and manage applications on GCP. Associate-Cloud-Engineer exam covers a wide range of topics, including creating GCP projects, deploying applications, networking, storage, compute, and security. Candidates who pass the exam will be able to demonstrate their proficiency in using GCP services to design and deploy highly available, scalable, and secure applications. Google Associate Cloud Engineer Exam certification is highly valued in the industry and can open up new job opportunities for individuals seeking to advance their careers in cloud computing.

## Google Associate Cloud Engineer Exam Sample Questions (Q118-Q123):

### NEW QUESTION # 118

You have deployed an application on a Compute Engine instance. An external consultant needs to access the Linux-based instance. The consultant is connected to your corporate network through a VPN connection, but the consultant has no Google account. What

should you do?

- A. Instruct the external consultant to use the gcloud compute ssh command line tool by using Identity-Aware Proxy to access the instance.
- B. Instruct the external consultant to use the gcloud compute ssh command line tool by using the public IP address of the instance to access it.
- **C. Instruct the external consultant to generate an SSH key pair, and request the public key from the consultant. Add the public key to the instance yourself, and have the consultant access the instance through SSH with their private key.**
- D. Instruct the external consultant to generate an SSH key pair, and request the private key from the consultant. Add the private key to the instance yourself, and have the consultant access the instance through SSH with their public key.

**Answer: C**

Explanation:

The best option is to instruct the external consultant to generate an SSH key pair, and request the public key from the consultant. Then, add the public key to the instance yourself, and have the consultant access the instance through SSH with their private key. This way, you can grant the consultant access to the instance without requiring a Google account or exposing the instance's public IP address. This option also follows the best practice of using user-managed SSH keys instead of service account keys for SSH access<sup>1</sup>.

Option A is not feasible because the external consultant does not have a Google account, and therefore cannot use Identity-Aware Proxy (IAP) to access the instance. IAP requires the user to authenticate with a Google account and have the appropriate IAM permissions to access the instance<sup>2</sup>. Option B is not secure because it exposes the instance's public IP address, which can increase the risk of unauthorized access or attacks. Option D is not correct because it reverses the roles of the public and private keys. The public key should be added to the instance, and the private key should be kept by the consultant. Sharing the private key with anyone else can compromise the security of the SSH connection<sup>3</sup>.

### NEW QUESTION # 119

You need to migrate invoice documents stored on-premises to Cloud Storage. The documents have the following storage requirements:

- \* Documents must be kept for five years.
- \* Up to five revisions of the same invoice document must be stored, to allow for corrections.
- \* Documents older than 365 days should be moved to lower cost storage tiers.

You want to follow Google-recommended practices to minimize your operational and development costs.

What should you do?

- **A. Enable retention policies on the bucket, use lifecycle rules to change the storage classes of the objects, set the number of versions, and delete old files.**
- B. Enable object versioning on the bucket, and use Cloud Scheduler to invoke a Cloud Functions instance to move or delete your documents based on their metadata.
- C. Enable object versioning on the bucket, use lifecycle conditions to change the storage class of the objects, set the number of versions, and delete old files.
- D. Enable retention policies on the bucket, and use Cloud Scheduler to invoke a Cloud Function to move or delete your documents based on their metadata.

**Answer: A**

### NEW QUESTION # 120

You are managing a project for the Business Intelligence (BI) department in your company. A data pipeline ingests data into BigQuery via streaming. You want the users in the BI department to be able to run the custom SQL queries against the latest data in BigQuery. What should you do?

- A. Create a Data Studio dashboard that uses the related BigQuery tables as a source and give the BI team view access to the Data Studio dashboard.
- **B. Assign the IAM role of BigQuery User to a Google Group that contains the members of the BI team.**
- C. Use Cloud Scheduler to schedule a batch Dataflow job to copy the data from BigQuery to the BI team's internal data

warehouse.

- D. Create a Service Account for the BI team and distribute a new private key to each member of the BI team

**Answer: B**

Explanation:

When applied to a dataset, this role provides the ability to read the dataset's metadata and list tables in the dataset. When applied to a project, this role also provides the ability to run jobs, including queries, within the project. A member with this role can enumerate their own jobs, cancel their own jobs, and enumerate datasets within a project. Additionally, allows the creation of new datasets within the project; the creator is granted the BigQuery Data Owner role (roles/bigquery.dataOwner) on these new datasets.

#### NEW QUESTION # 121

You need to migrate invoice documents stored on-premises to Cloud Storage. The documents have the following storage requirements:

- \* Documents must be kept for five years.
  - \* Up to five revisions of the same invoice document must be stored, to allow for corrections.
  - \* Documents older than 365 days should be moved to lower cost storage tiers.
- You want to follow Google-recommended practices to minimize your operational and development costs. What should you do?

- **A. Enable object versioning on the bucket, use lifecycle conditions to change the storage class of the objects, set the number of versions, and delete old files.**
- B. Enable object versioning on the bucket, and use Cloud Scheduler to invoke a Cloud Functions instance to move or delete your documents based on their metadata.
- C. Enable retention policies on the bucket, and use Cloud Scheduler to invoke a Cloud Function to move or delete your documents based on their metadata.
- D. Enable retention policies on the bucket, use lifecycle rules to change the storage classes of the objects, set the number of versions, and delete old files.

**Answer: A**

Explanation:

#### NEW QUESTION # 122

You are building a multi-player gaming application that will store game information in a database. As the popularity of the application increases, you are concerned about delivering consistent performance. You need to ensure an optimal gaming performance for global users, without increasing the management complexity. What should you do?

- **A. Use Cloud Spanner to store user data mapped to the game statistics.**
- B. Use Cloud SQL database with cross-region replication to store game statistics in the EU, US, and APAC regions.
- C. Use BigQuery to store game statistics with a Redis on Memorystore instance in the front to provide global consistency.
- D. Store game statistics in a Bigtable database partitioned by username.

**Answer: A**
