NEW QUESTION # 32

Consider the following testing setup in Orchestrator:

Orchestrator folder "FolderA" which contains test data queue "TestData" Orchestrator folder "FolderB" which contains test data queue "TestData" Data-driven test case "TestCase123" linked with "TestData" queue from Orchestrator folder "FolderA" "TestCase123" is published to Orchestrator and executed from "FolderB". What will be the result?

- A. "TestCase123" will execute against the data in test data queue "TestData" from "FolderB".
- **B. Execution will not start.**
- C. "TestCase123" will execute against the data in test data queue "TestData" from "FolderA".
- D. Execution will be stuck in Pending state.

Answer: B

Explanation:

Execution will not start because TestCase123 is linked to the "TestData" queue in FolderA, but it's being executed from FolderB. In UiPath, test data queues are folder-scoped, and a mismatch between the folder context of the test case and the data queue will prevent execution.
