

Exam OGEA-10B Guide | Valid OGEA-10B: TOGAF Enterprise Architecture Bridge Exam (English)

2026 Latest TestkingPDF OGEA-10B PDF Dumps and OGEA-10B Exam Engine Free Share: <https://drive.google.com/open?id=15IHckWYXd18unT76Nw7NmR5lof4Ppt>

Our OGEA-10B learning questions are always the latest and valid to our loyal customers. We believe this is a basic premise for a company to continue its long-term development. The user passes the OGEA-10B exam and our market opens. This is a win-win situation. Or, you can use your friend to find a user who has used our OGEA-10B Guide quiz. In fact, our OGEA-10B study materials are very popular among the candidates. And more and more candidates are introduced by their friends or classmates.

Are you on the way to pass the OGEA-10B exam? Our OGEA-10B exam questions will be the best choice for you. And if you still feel uncertain about the content, wondering whether it is the exact OGEA-10B exam material that you want, you can free download the demo to check it out. You will be quite surprised by the convenience to have an overview just by clicking into the link, and you can experience all kinds of OGEA-10B versions.

Exam OGEA-10B Guide 100% Pass | Trustable Visual TOGAF Enterprise Architecture Bridge Exam (English) Cert Exam Pass for sure

In this information-dominated society, boosting plenty stocks of knowledge and being competent in some certain area can establish yourself in society and help you get a high social status. Passing OGEA-10B certification can help you realize these goals and find a good job with high income. If you buy our OGEA-10B Practice Test you can pass the OGEA-10B exam successfully and easily.

And if you study with our OGEA-10B exam questions for only 20 to 30 hours, you will pass the OGEA-10B exam easily.

The Open Group OGEA-10B Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Applying the TOGAF Standard in Enterprise Architecture Projects: This section assesses your skill related to applying the knowledge of TOGAF 10 in practical scenarios. It covers using the updated ADM phases to address modern enterprise architecture challenges.
Topic 2	<ul style="list-style-type: none">Understanding Key Concepts of TOGAF Standard: This section has a focus on your grasp of the major differences between TOGAF 9 and the latest version. Topics include new terminology and concepts introduced in TOGAF 10 and changes to existing workflows and processes within the TOGAF Architecture Development Method (ADM).
Topic 3	<ul style="list-style-type: none">Applying new TOGAF 10 concepts: This section covers applying and understanding the role of ADM extensions and tailoring the ADM for specific situations. This assesses the skills of candidates in demonstrating how TOGAF 10 integrates with other frameworks and methodologies.

The Open Group TOGAF Enterprise Architecture Bridge Exam (English) Sample Questions (Q103-Q108):

NEW QUESTION # 103

Please read this scenario prior to answering the question

You have been appointed as senior architect working for an autonomous driving technology development company. The mission of the company is to build an industry leading unified technology and software platform to support connected cars and autonomous driving.

The company uses the TOGAF Standard as the basis for its Enterprise Architecture (EA) framework.

Architecture development within the company follows the purpose-based EA Capability model as described in the TOGAF Series Guide: A Practitioners' Approach to Developing Enterprise Architecture Following the TOGAF ADM.

An architecture to support strategy has been completed defining a long-range Target Architecture with a roadmap spanning five years. This has identified the need for a portfolio of projects over the next two years.

The portfolio includes development of travel assistance systems using swarm data from vehicles on the road.

The current phase of architecture development is focused on the Business Architecture which needs to support the core travel assistance services that the company plans to provide. The core services will manage and process the swarm data generated by vehicles, paving the way for autonomous driving in the future.

The presentation and access to different variations of data that the company plans to offer through its platform poses an architecture challenge. The application portfolio needs to interact securely with various third-party cloud services, and V2X (Vehicle-to-Everything) service providers in many countries to be able to manage the data at scale. The security of V2X is a key concern for the stakeholders. Regulators have stated that the user's privacy be always protected, for example, so that the drivers' journey cannot be tracked or reconstructed by compiling data sent or received by the car.

Refer to the scenario

You have been asked to describe the risk and security considerations you would include in the current phase of the architecture development?

Based on the TOGAF standard which of the following is the best answer?

- A. You will create a security domain model so that assets with the same level can be managed under one security policy. Since data is being shared across partners, you will establish a security federation to include them. This would include contractual arrangements, and a definition of the responsibility areas for the data exchanged, as well as security implications. You would undertake a risk assessment determining risks relevant to specific data assets.
- B. You will focus on the relationship with the third parties required for the travel assistance systems and define a trust framework. This will describe the relationship with each party. Digital certificates are a key part of the framework and will be used to create trust between parties. You will monitor legal and regulatory changes across all the countries to keep the trust framework in compliance.
- C. You will perform a qualitative risk assessment for the data assets exchanged with partners. This will deliver a set of priorities, high to medium to low, based on identified threats, the likelihood of occurrence, and the impact if it did occur. Using the priorities, you would then develop a Business Risk Model which will detail the risk strategy including classifications to determine what mitigation is enough.

- D. You will focus on data quality as it is a key factor in risk management. You will identify the datasets that need to be safeguarded. For each dataset, you will assign ownership and responsibility for the quality of data needs. A security classification will be defined and applied to each dataset. The dataset owner will then be able to authorize processes that are trusted for a certain activity on the dataset under certain circumstances.

Answer: A

Explanation:

A security domain model is a technique that can be used to define the security requirements and policies for the architecture. A security domain is a grouping of assets that share a common level of security and trust. A security policy is a set of rules and procedures that govern the access and protection of the assets within a security domain. A security domain model can help to identify the security domains, the assets within each domain, the security policies for each domain, and the relationships and dependencies between the domains¹ Since the data is being shared across partners, a security federation is needed to establish a trust relationship and a common security framework among the different parties. A security federation is a collection of security domains that have agreed to interoperate under a set of shared security policies and standards. A security federation can enable secure data exchange and collaboration across organizational boundaries, while preserving the autonomy and privacy of each party. A security federation requires contractual arrangements, and a definition of the responsibility areas for the data exchanged, as well as security implications² A risk assessment is a process that identifies, analyzes, and evaluates the risks that may affect the architecture. A risk assessment can help to determine the likelihood and impact of the threats and vulnerabilities that may compromise the security and privacy of the data assets. A risk assessment can also help to prioritize and mitigate the risks, and to monitor and review the risk situation³ Therefore, the best answer is D, because it describes the risk and security considerations that would be included in the current phase of the architecture development, which is focused on the Business Architecture.

The answer covers the security domain model, the security federation, and the risk assessment techniques that are relevant to the scenario.

NEW QUESTION # 104

Exhibit

Consider the illustration showing an architecture development cycle. Which description matches the phase of the ADM labeled as item 2?

- A. Establishes procedures for managing change to the new architecture
- B. Operates the process of managing architecture requirements
- C. Conducts implementation planning for the architecture defined in previous phases
- D. Provides architectural oversight for the implementation

Answer: D

Explanation:

Based on the illustration, the phase of the ADM labeled as item 2 is the Implementation Governance phase.

This phase provides architectural oversight for the implementation. It ensures that the implementation project conforms to the architecture. It also provides a framework for monitoring and managing the implementation.

The Implementation Governance phase involves the following activities:

Finalizing the Architecture Roadmap and the supporting Implementation and Migration Plan
Assigning an Architecture Board to oversee the implementation
Establishing Architecture Contracts with the implementation partners
Reviewing and approving the implementation project plans and deliverables
Performing Architecture Compliance reviews to ensure alignment with the architecture
Performing Architecture Audit reviews to ensure quality and performance of the architecture
Resolving any architecture issues or change requests that arise during the implementation
Maintaining the architecture lifecycle and ensuring its continuity
The Implementation Governance phase is essential for ensuring that the architecture is realized as intended and that it delivers the expected business value and outcomes.

References: : Implementation Governance

NEW QUESTION # 105

Consider the following statements:

1. Each contracted party is required to act responsibly to the organization and its stakeholders.
2. All decisions taken, processes used, and their implementation will not be allowed to create unfair advantage to any one particular party.
3. Digital Transformation and operations will be more effective and efficient.
4. Strategic decision-making by C-Level executives and business leaders will be more effective.

Which statements highlight the value and necessity for Architecture Governance to be adopted within organizations?

- A. 1 & 2
- B. 1 & 4
- C. 2 & 3
- D. 3 & 4

Answer: A

Explanation:

Architecture governance is the practice of ensuring compliance with the enterprise architecture and its principles, standards, and goals. Architecture governance provides the means to establish, monitor, and control the architecture development and implementation processes, and to resolve any issues or conflicts that may arise. Architecture governance also ensures that all stakeholders are represented and involved in the decision-making process, and that their interests and concerns are balanced and aligned. Statements 1 and 2 highlight the value and necessity for architecture governance to be adopted within organizations, as they emphasize the importance of responsibility, accountability, fairness, and transparency in the architectural activities. Statements 3 and 4 are more related to the benefits and outcomes of having a good enterprise architecture, rather than the governance aspect.

NEW QUESTION # 106

In which part of the ADM cycle do building block gaps become associated with work packages that will address the gaps?

- A. Phase E
- B. Phases G and H
- C. Phases F
- D. Phases B C and D

Answer: A

Explanation:

In Phase E of the ADM cycle, building block gaps become associated with work packages that will address the gaps. This phase involves creating an Implementation and Migration Plan that defines a set of work packages and Transition Architectures that will deliver the Target Architecture. Reference: The TOGAF Standard | The Open Group Website, Section 3.2.5 Phase E: Opportunities & Solutions.

NEW QUESTION # 107

What does the TOGAF ADM recommend for use in developing an Architecture Vision document?

- A. Requirements Management
- B. Business Scenarios
- C. Architecture Principles
- D. Gap Analysis

Answer: B

Explanation:

Business scenarios are a technique recommended by the TOGAF ADM for use in developing an Architecture Vision document¹². Business scenarios are a means of capturing the business requirements and drivers, the processes and actors involved, and the desired outcomes and measures of success³⁴. Business scenarios help to create a common vision and understanding among the stakeholders, and to identify and validate the architecture requirements. Business scenarios also provide a basis for analyzing the impact and value of the proposed architecture. References:
