

How Can IBM C1000-173 Exam Questions Help You in Exam Preparation?

P.S. Free & New C1000-173 dumps are available on Google Drive shared by iPassleader: https://drive.google.com/open?id=1pKi86XYZfL6Zu2hhoue_b736Hv4e8ZtQ

Professionals have designed this IBM C1000-173 exam dumps product for the ones who want to clear the C1000-173 test in a short time. Success in the IBM C1000-173 exam questions helps you get a good salary job in a reputed company. iPassleader IBM C1000-173 Study Material is available in three formats. These formats have C1000-173 real dumps so that the applicants can memorize them and crack the C1000-173 certification test with a good score.

IBM C1000-173 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Plan for a Cloud Pak for Data Implementation: This section of the exam measures the skills of an Implementation Consultant and covers determining which Cloud Pak for Data services to deploy based on organizational needs. It involves sizing the Kubernetes• OpenShift cluster appropriately for workload demands and planning backup and restore strategies to ensure data protection. Planning for high availability and disaster recovery is essential to maintain uninterrupted service. Multi-tenancy requirements must be understood to support multiple user groups securely on shared infrastructure. Migration requirements need assessment to transition existing data and workloads smoothly.
Topic 2	<ul style="list-style-type: none">• Architect with AI Series: This section measures the skills of an AI Solution Architect and includes designing architectures for solutions involving various IBM Watson AI services. Architecting with Watson Assistant involves creating conversational AI interfaces. Watson Discovery solutions focus on building cognitive search and content analytics applications. Watson Pipelines solutions involve orchestrating data science workflows. Watson OpenScale architectures enable AI model monitoring and governance. Architecting with Match 360 supports personalized engagement by integrating multi-channel customer insights.
Topic 3	<ul style="list-style-type: none">• Security Requirements: This domain targets a Security Architect and focuses on planning security for a Cloud Pak for Data deployment. It includes managing certificates that secure communications, identity management systems, and access and authorization controls to enforce secure and compliant user and service interactions. The auditing features and their integration with enterprise audit systems are crucial to ensure traceability and accountability. Asset interchange security involves safeguarding data movement between services.

iPassleader IBM C1000-173 Exam Dumps Preparation Material is Available

Some top-of-the-list IBM Cloud Pak for Data v4.7 Architect (C1000-173) exam benefits are proven recognition of skills, more career opportunities, instant rise in salary, and quick promotion. To gain all these IBM C1000-173 certification benefits you just need to pass the IBM Cloud Pak for Data v4.7 Architect (C1000-173) exam which is quite challenging and not easy to crack. However, with the help of iPassleader C1000-173 Dumps PDF, you can do this job easily and nicely.

IBM Cloud Pak for Data v4.7 Architect Sample Questions (Q25-Q30):

NEW QUESTION # 25

What registry permissions does OpenShift cluster node require?

- A. Only the master nodes ever require registry access.
- B. Only the bastion node should be able to reach the registry.
- C. All nodes must be able to push to and pull from the registry.
- D. While the bastion node pushes to the private registry, only the worker nodes pull images.

Answer: C

Explanation:

In an OpenShift environment that hosts IBM Cloud Pak for Data, all cluster nodes-including master and worker nodes-must have access to the container registry to pull required images during deployment and runtime. In scenarios involving custom images, some nodes may also need to push to the registry. While the bastion node may initiate the setup or mirror images, it is not the only node involved. Therefore, all nodes should be configured with both pull and, where applicable, push access to the registry to ensure consistent deployment and operations.

NEW QUESTION # 26

When granting a user access to the Data Engineer role, which two permissions will the user be associated with as part of this role?

- A. Manage data protection rules
- B. Monitor project workload
- C. Manage workflows
- D. Manage platform
- E. Create projects

Answer: A,E

Explanation:

The Data Engineer role in IBM Cloud Pak for Data includes permissions necessary for managing the data pipeline lifecycle. This includes the ability to create projects, manage data assets, and configure data protection rules, which are critical for ensuring data privacy and governance. The role does not include platform-level administrative privileges like managing the platform or monitoring all workloads. Workflow management is typically assigned to users with broader project or orchestrator roles.

NEW QUESTION # 27

What is the significance of using platform connections in Data Replication on Cloud Pak for Data?

- A. Isolates data environments
- B. Enhances interoperability and ease of configuration
- C. Decreases connectivity with data sources and targets
- D. Complicates data integration processes

Answer: B

NEW QUESTION # 28

When planning the integration of IBM Cloud Pak for Data with existing enterprise systems, which aspect is crucial for ensuring seamless connectivity and data exchange? (Select two)

- A. Network bandwidth
- B. API compatibility

- C. User authentication mechanisms
- D. Data encryption standards

Answer: A,B

NEW QUESTION # 29

Which two features are valid only when deploying Cloud Pak for Data on-premises?

- A. Services are automatically updated.
- **B. The number of OpenShift nodes is configured by the administrator.**
- C. Network security is managed by IBM.
- **D. Persistent storage is always used.**
- E. Compute resources are automatically scaled.

Answer: B,D

Explanation:

In on-premises deployments of IBM Cloud Pak for Data:

Administrators have full control over the number of OpenShift nodes, unlike cloud-managed environments where node scaling may be automatic or abstracted.

Persistent storage is always required and configured by the infrastructure team to meet service requirements and ensure data availability.

Auto-scaling of compute and automatic updates of services are not handled by IBM in on-prem setups.

Network security responsibilities also lie with the deploying organization, not IBM, in an on-premises model.

NEW QUESTION # 30

.....

iPassleader free update our training materials, which means you will always get the latest C1000-173 exam training materials. If C1000-173 exam objectives change, The learning materials iPassleader provided will follow the change. iPassleader know the needs of each candidate, we will help you through your C1000-173 Exam Certification. We help each candidate to pass the exam with best price and highest quality.
