## SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q13-Q18):

### NEW QUESTION # 13

What is the first step in starting an analysis in SAP Signavio Process Intelligence?

- **A. Upload the event log**
- B. Create a new process
- C. Create a new investigation
- D. Upload the attribute log

**Answer: A**

Explanation:

The first step in starting an analysis in SAP Signavio Process Intelligence is:

\* Option D (Upload the event log): The event log is a critical data source for process mining and analysis in SAP Signavio Process Intelligence. It contains detailed records of process activities, including start and end times, performers, and other event attributes. Uploading the event log is the initial step to analyze the actual performance of business processes, enabling organizations to discover, monitor, and enhance their processes based on real data.

### NEW QUESTION # 14

How can Plug and Gain by SAP Signavio support customers prior to an S/4HANA transformation? Note:

There are 2 correct answers to this question.

- A. It allows customers to test SAP S/4HANA functionalities
- **B. It helps to identify process harmonization potential**
- **C. It helps to decide which implementation approach to use**
- D. It replaces the SAP S/4HANA Readiness Check

**Answer: B,C**

Explanation:

Plug and Gain by SAP Signavio supports organizations preparing for an SAP S/4HANA transformation by analyzing current processes. The documentation specifies:

- \* Exact Extract: "Plug and Gain supports S/4HANA transformations by:
- \* Identifying process harmonization potential to streamline and standardize processes before migration.
- \* Helping customers decide on the optimal implementation approach (e.g., greenfield or brownfield) based on process analysis." (SAP Signavio Process Intelligence Overview, section on "S/4HANA Transformation Support").

\* Explanation:

\* Option A (It helps to identify process harmonization potential): Plug and Gain analyzes existing processes to identify variations and inefficiencies, enabling organizations to standardize processes for a smoother S/4HANA transition.

\* Option D (It helps to decide which implementation approach to use):By providing insights into current process performance, Plug and Gain informs decisions on whether a greenfield (new implementation) or brownfield (system conversion) approach is more suitable.

\* Option B (It allows customers to test SAP S/4HANA functionalities)is incorrect as Plug and Gain focuses on process analysis, not testing S/4HANA features, which is done in sandbox environments.

\* Option C (It replaces the SAP S/4HANA Readiness Check)is incorrect because Plug and Gain complements, but does not replace, the Readiness Check, which assesses technical readiness.

### NEW QUESTION # 15

What is the benefit of using Attribute Visualization Layers?Note: There are 2correct answers to this question.

- A. Display attributes in different colors based on their values.
- B. Display attributes categories above a task.
- C. Display attributes directly on the diagram canvas.
- D. Display attributes of the linked dictionary term.

**Answer: A,C**

Explanation:

The use ofAttribute Visualization Layersin SAP Signavio offers several benefits, including the ability to:

\* Option B (Display attributes in different colors based on their values):This feature allows users to quickly visualize variations in process attributes by color-coding them. It helps in identifying patterns or outliers within the process model, making it easier to analyze and interpret data directly from the diagram.

\* Option D (Display attributes directly on the diagram canvas):Attributes can be displayed directly on the process diagram, providing immediate context and details about process steps without needing to navigate away from the visual model. This enhances the comprehensibility and accessibility of process information directly within the visualization.
