

# Top Reliable JN0-351 Dumps Sheet | Professional Juniper JN0-351 Labs: Enterprise Routing and Switching, Specialist (JNCIS-ENT)

What's more, part of that Exams4sures JN0-351 dumps now are free: <https://drive.google.com/open?id=1fyIN3fdrfQWlJknCan1ciKYLoKJoyzE>

Our JN0-351 quiz torrent can help you get out of trouble regain confidence and embrace a better life. Our JN0-351 exam question can help you learn effectively and ultimately obtain the authority certification of Juniper, which will fully prove your ability and let you stand out in the labor market. We have the confidence and ability to make you finally have rich rewards. Our JN0-351 Learning Materials provide you with a platform of knowledge to help you achieve your wishes. Our JN0-351 study materials have unique advantages for you to pass the JN0-351 exam.

## Juniper JN0-351 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• IS-IS: Aspiring Juniper networking professionals enhance their understanding of IS-IS routing protocols. This topic equips candidates with the knowledge to configure and monitor IS-IS systems, addressing specific exam challenges and practical applications.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Tunnels: The fundamentals of IP tunneling are emphasized, highlighting their requirements and functionalities. Mastery in configuring, monitoring, and troubleshooting tunnels equips professionals to meet the demands of the JN0-351 exam.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Layer 2 Security: This topic introduces Layer 2 protection mechanisms and firewall filters to fortify network security. Practical skills in configuring, monitoring, and troubleshooting these features prepare candidates to address exam objectives and real-world challenges effectively.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• OSPF: The concepts and operational details of OSPF are explored, providing tools for routing efficiency. Configuration and troubleshooting mastery ensure readiness for both the exam and complex enterprise environments.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Spanning Tree: Networking professionals explore the principles and advantages of the Spanning Tree Protocol (STP) to ensure loop-free topologies in Layer 2 networks.</li></ul>

- High Availability: This topic covers the importance and application of high availability within Junos OS environments. Knowledge in configuring and managing these components is critical for ensuring robust and uninterrupted network operations, aligning with exam expectations.

## &gt;&gt; Reliable JN0-351 Dumps Sheet &lt;&lt;

## Buy Actual Juniper JN0-351 Dumps Now and Receive Up to 1 year of Free Updates

As for the points you may elapse or being frequently tested in the real exam, we give referent information, then involved them into our JN0-351 practice materials. Their expertise about JN0-351 practice materials is unquestionable considering their long-time research and compile. Furnishing exam candidates with highly effective materials, you can even get the desirable outcomes within one week. By concluding quintessential points into JN0-351 practice materials, you can pass the exam with the least time while huge progress.

## Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q122-Q127):

### NEW QUESTION # 122

Referring to the exhibit, what will be the IS-IS adjacency result of the configurations?

□

- A. A level 2 IS-IS adjacency will form.
- B. No IS-IS adjacencies will form.
- C. A level 1 and level 2 IS-IS adjacency will form.
- D. A level 1 IS-IS adjacency will form.

**Answer: B**

### NEW QUESTION # 123

You deployed a new EX Series switch with DHCP snooping enabled and you do not see any entries in the snooping databases for an interface. Which two Juniper configurations for that interface caused this issue? (Choose two.)

- A. The interface is configured as a disabled port.
- B. The interface is configured as a trunk port.
- C. MAC limiting is enabled on the interface.
- D. Dynamic ARP inspection is enabled on the interface.

**Answer: A,B**

Explanation:

A is correct because the interface is configured as a disabled port. A disabled port does not forward any traffic, including DHCP packets. Therefore, DHCP snooping cannot learn any MAC addresses or lease information from a disabled port.

C is correct because the interface is configured as a trunk port. By default, all trunk ports on the switch are trusted for DHCP snooping. This means that DHCP snooping does not inspect or filter any DHCP packets received on a trunk port. Therefore, DHCP snooping does not add any entries to the snooping database for a trunk port.

### NEW QUESTION # 124

You are asked to explore adding BGP route reflectors to allow for increased scale in your core network. Which statement is correct in this scenario?

- A. The cluster ID is required to prevent routing loops.
- B. Route reflectors are required whenever internal BGP (IBGP) sessions are needed.
- C. The cluster ID is not required to use route reflectors.
- D. Route reflectors require that the network is connected in a physical full mesh.

**Answer: A**

#### NEW QUESTION # 125

You are asked to connect an IP phone and a user computer using the same interface on an EX Series switch. The traffic from the computer does not use a VLAN tag, whereas the traffic from the IP phone uses a VLAN tag. Which feature enables the interface to receive both types of traffic?

- **A. voice VLAN**
- B. MAC limiting
- C. DHCP snooping
- D. native VLAN

**Answer: A**

Explanation:

Explanation

The feature that enables an interface on an EX Series switch to receive both untagged traffic (from the computer) and tagged traffic (from the IP phone) is the voice VLAN.

The voice VLAN feature in EX-series switches enables access ports to accept both data (untagged) and voice (tagged) traffic and separate that traffic into different VLANs. This allows the switch to differentiate between voice and data traffic, ensuring that voice traffic can be treated with a higher priority. Therefore, option D is correct.

#### NEW QUESTION # 126

Which two statements are correct about generated routes? (Choose two.)

- **A. Generated routes require a contributing route.**
- B. Generated routes appear in the routing table as static routes
- C. Generated routes cannot be redistributed into dynamic routing protocols.
- **D. Generated routes show a next hop in the routing table.**

**Answer: A,D**

Explanation:

A is correct because generated routes require a contributing route. A contributing route is a route that matches the destination prefix of the generated route and has a valid next hop. A generated route is only installed in the routing table if there is at least one contributing route available. This ensures that the generated route is reachable and useful. If there is no contributing route, the generated route is not added to the routing table.

B is correct because generated routes show a next hop in the routing table. A generated route inherits the next hop of its primary contributing route, which is the most preferred route among all the contributing routes. The next hop of the generated route can be either an IP address or an interface name, depending on the type of the contributing route. The next hop of the generated route can also be modified by a routing policy.

#### NEW QUESTION # 127

.....

To keep the JN0-351 practice questions in Juniper PDF format up to date, we regularly update them to according to changes in the real JN0-351 exam content. This dedication to keep Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) exam questions relevant to the JN0-351 actual test domain ensures that customers always get the most up-to-date Juniper JN0-351 questions from Exams4sures.
