#### NEW QUESTION 29

An organization uses Dynamics 365 Finance and Dynamics 365 Supply Chain Management. The organization is experiencing various performance issues and is looking for solutions. You need to recommend tools to determine the cause of the performance issues.

What should you recommend? To answer, drag the appropriate tools to the correct requirements.

Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

| Tools                               | Requirement                                           | Tool |
|-------------------------------------|-------------------------------------------------------|------|
| Performance Timer/Debugger/Profiler | Network issues                                        |      |
| UCC environment monitoring          | View performance logs and telemetry data              |      |
| Trace parser                        | Performance optimize a slow process using XSL and SQL |      |
| PerfMon/Visual Studio load test     | Simulate concurrent users                             |      |

**Answer:**

| Tools                               | Requirement                                           | Tool                                |
|-------------------------------------|-------------------------------------------------------|-------------------------------------|
| Performance Timer/Debugger/Profiler | Network issues                                        | Performance Timer/Debugger/Profiler |
| UCC environment monitoring          | View performance logs and telemetry data              | UCC environment monitoring          |
| Trace parser                        | Performance optimize a slow process using XSL and SQL | Trace parser                        |
| PerfMon/Visual Studio load test     | Simulate concurrent users                             | PerfMon/Visual Studio load test     |

- Define deployment and infrastructure strategy
    - 1. Size and configure infrastructure and performance
    - 2. Plan environment management and lifecycle
    - 3. Select deployment model: cloud, hybrid, or on-premises
  - Define data management strategy
    - 1. Define data retention and archival policies
    - 2. Master data management and governance
    - 3. Plan data migration, transformation, and validation
  - Define security and compliance architecture
    - 1. Design role-based security and access control
    - 2. Integrate with Azure Active Directory and identity providers
    - 3. Meet compliance, privacy, and regulatory requirements
- Define solution strategies 40-45%
- Define business intelligence and reporting strategy
    - 1. Integrate Power BI and data warehouses
    - 2. Design analytics and reporting architecture
  - Define application lifecycle management (ALM) strategy
    - 1. Implement CI/CD pipelines and release management
    - 2. Use Lifecycle Services (LCS) and Azure DevOps tools
    - 3. Manage code, configurations, and data movement
  - Define integration and extensibility strategy
    - 1. Plan extensions, customizations, and ISV solutions
    - 2. Select integration patterns: OData, dual-write, APIs
    - 3. Integrate with Power Platform, Azure, and external systems

## Reliable MB-700 Exam Book, MB-700 Test Preparation

The Microsoft Dynamics 365: Finance and Operations Apps Solution Architect (MB-700) exam questions are real, valid, and verified by Microsoft MB-700 certification exam trainers. They work together and put all their efforts to ensure the top standard and relevancy of MB-700 Exam Dumps all the time. So we can say that with Microsoft MB-700 exam questions you will get everything that you need to make the MB-700 exam preparation simple, smart, and successful.

## Microsoft Dynamics 365: Finance and Operations Apps Solution Architect Sample Questions (Q90-Q95):

### NEW QUESTION # 90

A company uses Dynamics 365 Finance.

The company receives a large number of accounts payable invoices on a regular basis that are currently being entered manually.

You need to research ways accounts payable invoices can be created automatically.

What should you recommend? To answer, drag the appropriate solutions to the correct scenarios. Each solution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

| Answer Area                         |                                                                                                                               |          |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|----------|
| Solutions                           | Scenario                                                                                                                      | Solution |
| Vendor invoice automation           | Standard interface in Dynamics 365 Finance that can accept machine-ready invoice metadata format with applicable attachments. |          |
| Optical character recognition (OCR) | Technology that converts contained images into text format.                                                                   |          |
| EDI 810                             | Electronic format to send invoices.                                                                                           |          |
| Vendor collaboration                | Workspace designed for vendors to view invoice information and to submit invoices to Dynamics 365 Finance.                    |          |

**Answer:**

Explanation:

| Answer Area                         |                                                                                                                               |                                     |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|
| Solutions                           | Scenario                                                                                                                      | Solution                            |
| Vendor invoice automation           | Standard interface in Dynamics 365 Finance that can accept machine-ready invoice metadata format with applicable attachments. | Vendor invoice automation           |
| Optical character recognition (OCR) | Technology that converts contained images into text format.                                                                   | Optical character recognition (OCR) |
| EDI 810                             | Electronic format to send invoices.                                                                                           | EDI 810                             |
| Vendor collaboration                | Workspace designed for vendors to view invoice information and to submit invoices to Dynamics 365 Finance.                    | Vendor collaboration                |

Answer:

Explanation:

## Answer Area

| Tool                          | Service                                                                                                      |
|-------------------------------|--------------------------------------------------------------------------------------------------------------|
| Source control                | Logic apps<br>Microsoft Azure Active Directory<br>Microsoft Azure DevOps<br>Microsoft Azure Machine Learning |
| Track support incidents       | Logic apps<br>Microsoft Azure Active Directory<br>Microsoft Azure DevOps<br>Microsoft Azure Machine Learning |
| Predictive demand forecasting | Logic apps<br>Microsoft Azure Active Directory<br>Microsoft Azure DevOps<br>Microsoft Azure Machine Learning |

These are the selections for the tool: Track support incidents.

Explanation  
Answer Area

| Tool                          | Service                          |
|-------------------------------|----------------------------------|
| Source control                | Microsoft Azure DevOps           |
| Track support incidents       | Microsoft Azure DevOps           |
| Predictive demand forecasting | Microsoft Azure Machine Learning |

## NEW QUESTION # 93

A company plans to use Dynamics 365 Finance. You are leading a requirement gathering session for the company. The requirements provided by the company need more detail to allow for a solution. You need to provide a method for determining the requirement details. Which method should you use for each client scenario? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Methods and scenarios

| Scenario                                                                                | Method                                                                            |
|-----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| The client needs to see the system to provide further details about their requirements. | Proof of concept<br>Analysis of why<br>Process mapping<br><b>Proof of concept</b> |
| The client is unable to justify their requirements.                                     | Analysis of why<br><b>Analysis of why</b><br>Process mapping<br>Proof of concept  |

Answer:

Explanation:

| Scenario                                                                                | Method                                                                            |
|-----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| The client needs to see the system to provide further details about their requirements. | Proof of concept<br>Analysis of why<br>Process mapping<br><b>Proof of concept</b> |
| The client is unable to justify their requirements.                                     | Analysis of why<br><b>Analysis of why</b><br>Process mapping<br>Proof of concept  |

Explanation:

Methods and scenarios

Scenario

The client needs to see the system to provide further details about their requirements.

The client is unable to justify their requirements.

Method

Proof of concept

Analysis of why

Microsoft

#### NEW QUESTION # 94

You need to select the code package for the loyalty program.  
Which package should you recommend?

- A. Data package
- B. Application and Platform Binary update package
- C. AOT deployable package
- D. Platform update package

**Answer: C**

Explanation:

AOT deployable package - A deployable package that is generated from application metadata and source code. This deployable package is created in a development or build environment.

Note: Margie's Travel offers consumers a loyalty program. Consumers can earn points per dollar spent across all in countries in which Margie's operates. The loyalty program is currently managed by using a spreadsheet.

The infrastructure team must move the code for the loyalty program to test environment.

Margie's Travel learns that the loyalty program across multiple countries is not a standard industry process and is not a standard feature in Dynamics 365 Finance.

#### NEW QUESTION # 95

.....

In the past ten years, we have made many efforts to perfect our Microsoft MB-700 study materials. Our MB-700 study questions cannot tolerate any small mistake. All staff has made great dedication to developing the Microsoft MB-700 Exam simulation. Our professional experts are devoting themselves on the compiling and updating the exam materials.
