Latest 312-50v13 Braindumps Free - 312-50v13 Valid Practice Questions

If you do not have extraordinary wisdom, do not want to spend too much time on learning, but want to reach the pinnacle of life through 312-50v13 exam, then you must have 312-50v13 question torrent. The goal of 312-50v13 exam torrent is to help users pass the exam with the shortest possible time and effort. With 312-50v13 Exam Torrent, you neither need to keep yourself locked up in the library for a long time nor give up a rare vacation to review. You will never be frustrated by the fact that you can't solve a problem.

ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q709-Q714):

NEW QUESTION # 709
A penetration tester is assessing an organization's cloud infrastructure and discovers misconfigured IAM policies on storage buckets. The IAM settings grant read and write permissions to any authenticated user.
What is the most effective way to exploit this misconfiguration?

- A. Perform a Cross-Site Scripting (XSS) attack on the cloud management portal to gain access
- B. Use leaked API keys to access the cloud storage buckets and exfiltrate data
- C. Execute a SQL injection attack on the organization's website to retrieve sensitive information

- D. Create a personal cloud account to authenticate and access the misconfigured storage buckets

Answer: D

Explanation:
CEH notes that cloud IAM misconfigurations can unintentionally grant broad access. If any authenticated cloud account is permitted read/write access, attackers can simply authenticate with their own cloud identity and directly interact with the misconfigured storage buckets, enabling data exfiltration or manipulation.

NEW QUESTION # 710
Why would you consider sending an email to an address that you know does not exist within the company you are performing a Penetration Test for?

- A. To create needless SPAM
- B. To determine who is the holder of the root account
- C. To illicit a response back that will reveal information about email servers and how they treat undeliverable mail
- D. To test for virus protection
- E. To perform a DoS

Answer: C

Explanation:
Sending an email to a known non-existent user is a reconnaissance technique used to:
* Analyze bounce-back (NDR) messages.
* Discover the email server's operating system, filtering behavior, internal mail routing, and directory structure.
* Reveal technologies such as Exchange, Postfix, etc.
From CEH v13 Official Courseware:
* Module 2: Footprinting and Reconnaissance
CEH v13 Study Guide states:
"Sending a message to an invalid address can reveal error messages or NDRs that leak internal system details, such as mail server versions, spam filtering technologies, and internal naming conventions." Incorrect Options:
* A: Not applicable.
* B/C: Not the purpose here.
* E: Anti-virus testing requires a separate controlled method.
Reference:CEH v13 Study Guide - Module 2: Email Footprinting TechniquesRFC 3463 - Enhanced Mail System Status Codes

NEW QUESTION # 711
This TCP flag instructs the sending system to transmit all buffered data immediately.

- A. RST
- B. PSH
- C. SYN
- D. URG
- E. FIN

Answer: B

Explanation:
The PSH (Push) flag in TCP instructs the sending system to:
* Immediately deliver data to the application.
* Avoid waiting for additional buffered data to form a full segment.
This is important in interactive communications like Telnet or SSH, where the delay in transmission would degrade the user experience.
From CEH v13 Courseware:
* Module 3: Scanning Networks # TCP Flags and Packet Structure
Reference:CEH v13 Study Guide - Module 3: TCP Header Fields and FlagsRFC 793 - Transmission Control Protocol (TCP)

NEW QUESTION # 712

Peter extracts the SIDs list from a Windows 2000 Server machine using the hacking tool "SIDExtractor".
Here is the output of the SIDs:
[Image showing multiple user accounts with their Security Identifiers (SIDs)] From the above list identify the user account with System Administrator privileges.

- A. Rebecca
- B. Shawn
- C. Chang
- D. Sheela
- E. Micah
- F. John
- G. Somia

Answer: F

Explanation:
In a Windows system, a Security Identifier (SID) uniquely identifies each user and group. The SID format is:
S-1-5-21-<domain or machine ID>-<RID>
The Relative Identifier (RID) is the last component in the SID string.
According to Microsoft and CEH v13:
RID 500 # Built-in Administrator account
RID 501 # Guest account
RIDs > 1000 # Regular user accounts
In the given image, the SID:
s-1-5-21-1125394485-807628933-54978560-500chang
has a RID of 500, indicating the built-in administrator account.
From CEH v13:
Module 4: Enumeration
Topic: SID Enumeration
CEH v13 States:
"When enumerating Windows systems, the account with RID 500 is always the default Administrator account, unless renamed.
Attackers often target this account due to its elevated privileges." Incorrect Options:
All others have RIDs not equal to 500 (e.g., 100, 652, 412, etc.)
Reference:CEH v13 Study Guide - Module 4: Enumeration # Section: SID Enumeration & Windows Security AccountsMicrosoft
Documentation on Well-known SIDs: https://learn.microsoft.com/en-us/windows-server
/identity/ad-ds/manage/understand-security-identifiers

NEW QUESTION # 713
The network team has well-established procedures to follow for creating new rules on the firewall. This includes having approval from a manager prior to implementing any new rules. While reviewing the firewall configuration, you notice a recently implemented rule but cannot locate manager approval for it. What would be a good step to have in the procedures for a situation like this?

- A. Do not roll back the firewall rule as the business may be relying upon it, but try to get manager approval as soon as possible.
- B. Immediately roll back the firewall rule until a manager can approve it
- C. Monitor all traffic using the firewall rule until a manager can approve it.
- D. Have the network team document the reason why the rule was implemented without prior manager approval.

Answer: B

NEW QUESTION # 714
......

Attempting these 312-50v13 practice test questions, again and again, enhances your learning and eliminates errors in your readiness for the Certified Ethical Hacker Exam (CEHv13) certification exam. Customization features of Certified Ethical Hacker Exam (CEHv13) (312-50v13) practice test software give you chance to adjust the settings of the Certified Ethical Hacker Exam (CEHv13) (312-50v13) practice exams sessions. Windows laptops and PCs support the desktop-based software of the ECCouncil 312-50v13 practice test. These Certified Ethical Hacker Exam (CEHv13) (312-50v13) practice exams create situations that

replicate the actual 312-50v13 exam.
