NEW QUESTION # 28

Refer to the exhibit. You deployed an HA active-active load balance sandwich with two FortiGate VMs in Microsoft Azure. After the deployment, you prefer to use FGSP to synchronize sessions and allow asymmetric return traffic. In the environment, FortiGate port 1 and port 2 are facing external and internal load balancers respectively.

What IP address must you use in the peering configuration?

```
HA configuration
config system ha
    set session-pickup enable
    set session-pickup-connectionless enable
    set session-pickup-nat enable
    set session-pickup-expectation enable
    set override disable
end

config system standalone-cluster
    edit 0
        set peerip 10.0.1.x
        set syncvd "root"
    next
end
```

- A. The public load balancer port 2 IP address.
- B. The internal load balancer port 1 IP address.
- C. The opposite FortiGate port 1 IP address.
- **D. The opposite FortiGate port 2 IP address.**

Answer: D

Explanation:

In an FGSP (FortiGate Session Life Support Protocol) deployment with asymmetric traffic in Azure, the peerip must be set to the opposite FortiGate's internal interface (port2) IP address.

This ensures session synchronization between FortiGates through the internal network (behind the internal load balancer), which is required for proper failover handling.

  }
}

variable "vpccidr" {
