Juniper JN0-224 Dumps [2026] Boost Your Exam Preparation

As old saying goes, all roads lead to Rome. If you are still looking for your real interests and have no specific plan, our JN0-224 exam questions can be your new challenge. Now, people are blundering. Few people can calm down and ask what they really want. You live so tired now. Learning of our JN0-224 practice materials is the best way to stop your busy life. And you will have a totally different life if you just get the JN0-224 certification.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q66-Q71):

NEW QUESTION # 66
You want to perform a dry run on the myPlays playbook and use a custom inventory file called myRouters.ini.
Which Ansible command would you use in this scenario?

- A. ansible-playbook myPlays --check -i myRouters.ini
- B. ansible-playbook myPlays -limit myRouters
- C. ansible-playbook myPlays -extra-vars "dry run=True" myRouters.ini
- D. ansible-playbook myPlays -extra-vars "inventory_file=myRouters .ini"

Answer: D

NEW QUESTION # 67
Which two statements are correct about a Python dictionary data type? (Choose two.)

- A. The data contained in a dictionary data type cannot be removed once the dictionary has been created.
- B. The data stored in a dictionary data type is sequenced and indexed.
- C. The data contained in a dictionary data type is a key/value pair.
- D. The data stored in a dictionary data type is not sequenced or indexed.

Answer: C,D

Explanation:

A Python dictionary is a data type that stores data in the form of key/value pairs. It has the following characteristics:

Key/Value Pair (C): Each entry in a dictionary is a pair consisting of a unique key and a value. The key is used to access the corresponding value.

Not Sequenced or Indexed (D): Unlike lists or tuples, dictionaries do not maintain order for their entries (in versions prior to Python 3.7). Even though Python 3.7+ maintains insertion order, dictionaries are not considered indexed or sequenced in the traditional sense like lists, where elements are accessed via positional index.

Option A is incorrect because dictionary entries can be added, modified, or removed after the dictionary is created. Option B is incorrect because dictionaries are not accessed by a numeric index but rather by their keys.

Reference:

Python Official Documentation: Details the nature of dictionaries, including their mutability and key/value structure.

Python Data Structures Guide: Explains dictionary operations and characteristics.

NEW QUESTION # 68

What will determine which data serialization format is used for interfacing with a system?

- A. the operating system
- B. programming language version
- C. IDE specifications
- D. the system's API

Answer: D

NEW QUESTION # 69

Junos supports which two APIs for on-box scripting? (Choose two.)

- A. Chef
- B. XML
- C. JET
- D. Puppet

Answer: B,C

Explanation:

Juniper Networks' Junos operating system supports several APIs for on-box scripting, two of which are:

JET (Juniper Extension Toolkit): JET is a modern API framework that provides a programmable interface for interacting with Junos. It allows developers to create custom applications that run directly on Junos devices, enabling the automation of network operations. JET provides both a gRPC and a REST API interface, allowing for flexible integration with external systems.

XML API: The Junos XML API allows direct interaction with the Junos OS through XML-based requests. This API can be used to retrieve information, configure devices, and execute commands on Junos devices. The XML API is crucial for automation tasks as it provides a structured and consistent way to interact with the device's configuration and operational data.

Detailed Explanation:

JET (A) provides high-performance access to Junos routing, switching, and service elements via programmable interfaces. It is highly used for creating custom applications that require tight integration with the Junos OS.

XML (C), on the other hand, is a well-established method for interacting with Junos, especially for legacy systems or when working within environments where XML is the standard data format.

Other options like Puppet (B) and Chef (D) are not APIs provided by Junos for on-box scripting but are configuration management tools used externally to manage Junos devices.

Reference:

Juniper Networks JET Documentation: Provides details on how to leverage JET APIs for automation.

Junos XML Management Protocol Guide: Describes how to use XML for scripting and automating tasks in Junos.

These APIs are key components of Juniper's automation strategy, allowing for scalable, flexible, and efficient network operations.

NEW QUESTION # 70

Your organization is developing an application to automate management of Junos network appliances. You want to use the existing

PyEZ libraries to improve the development process. Which API would satisfy this requirement?

- A. JETAPI
- B. REST API
- C. XML API
- D. RPC API

Answer: B

NEW QUESTION # 71

......

You will get high passing score in the Juniper JN0-224 Real Exam with our valid test questions and answers. Exam4Free can provide you with the most reliable JN0-224 exam dumps and study guide to ensure you get certification smoothly. We guarantee the high accuracy of questions and answers to help candidates pass exam with 100% pass rate.
