Valid Exam Salesforce Slack-Dev-201 Practice - Updated Slack-Dev-201 Testkings

Research has found that stimulating interest in learning may be the best solution. Therefore, the Slack-Dev-201 prepare guide' focus is to reform the rigid and useless memory mode by changing the way in which the Slack-Dev-201 exams are prepared. Our Soft version of Slack-Dev-201 practice materials combine knowledge with the latest technology to greatly stimulate your learning power. By simulating enjoyable learning scenes and vivid explanations, users will have greater confidence in passing the qualifying Slack-Dev-201 exams.

Salesforce Certified Slack Developer Sample Questions (Q68-Q73):

NEW QUESTION # 68

When creating a Slack app for managing team deadlines, which feature would most effectively align with Slack's goals of simplifying

and enhancing work life?

- A. Integration of a separate, complex project management tool within Slack for tracking deadlines
- **B. A feature that allows team members to set and view deadlines within a dedicated Slack channel, with periodic reminders**
- C. Mandatory daily deadline reports from all team members in the general channel
- D. Constant pop-up notifications in Slack for each approaching deadline

Answer: B

Explanation:

A feature that allows team members to set and view deadlines within a dedicated Slack channel, with periodic reminders A feature that enables setting and viewing deadlines within a dedicated Slack channel, complemented by periodic reminders, aligns with Slack's principles of a streamlined and efficient work environment. This approach facilitates easy tracking and collaboration without being overly intrusive.

Why not the other options:

*Constant pop-up notifications can be distracting and may lead to notification fatigue.

*Mandatory daily reports in a general channel can lead to information overload and may not efficiently manage deadlines.

*Integrating a complex tool within Slack could complicate the user experience, going against the principle of simplifying work life.

NEW QUESTION # 69

What is the primary purpose of using the Block Kit Builder in Slack app development?

- **A. To visually design message layouts using Block Kit elements and generate the corresponding JSON code**
- B. To automate the testing and debugging of Slack apps without manual intervention
- C. To provide a visual interface for designing complex Slack app workflows and backend processes
- D. To directly code and deploy Slack apps without needing any understanding of Slack's APIs

Answer: A

Explanation:

To visually design message layouts using Block Kit elements and generate the corresponding JSON code The main purpose of Block Kit Builder is to offer a visual interface for designing message layouts using Block Kit UI elements, allowing developers to see the changes in real-time and automatically generate the corresponding JSON code. This tool streamlines the UI design process for Slack messages and improves development efficiency.

Why not the other options:

*Block Kit Builder is not for coding and deploying apps but rather for designing message layouts.

*Block Kit Builder focuses on designing message interfaces, not on complex workflows or backend processes.

*Block Kit Builder does not automate testing and debugging of Slack apps.

NEW QUESTION # 70

A company is developing a Slack app for internal use that allows employees to quickly access the company's policy documents. Which feature is most suitable for this purpose?

- A. Set up a modal form that appears when employees want to search for policy documents
- B. Use a bot to send policy documents via direct messages upon request
- C. Create a dedicated channel where all policy documents are posted
- **D. Implement a slash command that employees can use to retrieve specific policy documents**

Answer: D

Explanation:

Implement a slash command that employees can use to retrieve specific policy documents Slash commands are efficient for quickly accessing specific information like policy documents. By using a slash command, employees can easily retrieve the exact document they need without navigating through multiple channels or messages.

Why not the other options:

*Direct messages for each document can become cumbersome and unorganized.

*Having all documents in one channel can make it difficult to find specific policies quickly.

*A modal form would require additional steps to access and might not be as direct as a slash command.

NEW QUESTION # 71

When implementing the OAuth installation flow for your Slack app, what is the most secure way to handle the OAuth access token once it is received?

- A. Email the access token to the app administrator for safekeeping
- B. Embed the access token directly in the app's source code
- C. Store the access token in a publicly accessible database for easy retrieval
- **D. Store the access token securely on your server and ensure it is accessible only by the necessary parts of your application**

Answer: D

Explanation:

Store the access token securely on your server and ensure it is accessible only by the necessary parts of your application. Storing the OAuth access token securely on your server and restricting its access to only the necessary parts of your application is the most secure way to handle it. This minimizes the risk of unauthorized access and potential security breaches.

Why not the other options:

*Storing the access token in a publicly accessible database poses a significant security risk.

*Embedding the access token in the app's source code can lead to security vulnerabilities, especially if the code is shared or accessible publicly.

*Emailing the access token is not secure and risks exposure to unauthorized parties.

NEW QUESTION # 72

How does a published App Directory app differ from a distributed app?

- **A. A published App Directory app has been officially approved by Slack and listed in the Slack App Directory, whereas a distributed app might not be listed**
- B. A published App Directory app is generally for external communications, while a distributed app is for internal workspace collaboration
- C. Distributed apps offer broader functionality and integrations than those available in the Slack App Directory
- D. Published App Directory apps require a subscription fee, while distributed apps are always free

Answer: A

Explanation:

A published App Directory app has been officially approved by Slack and listed in the Slack App Directory, whereas a distributed app might not be listed. A published App Directory app is differentiated from a distributed app primarily by its official listing status. Published App Directory apps have been vetted and approved by Slack for inclusion in their directory, making them publicly discoverable and available for installation by any Slack user. Distributed apps, while they can be installed across multiple workspaces, may not necessarily be listed in the Slack App Directory.

Why not the other options:

*The type of communication (external vs. internal) is not a defining factor for these categories of apps.

*The functionality and integrations of an app are not inherently limited by its status as a distributed app or a published App Directory app.

*The pricing model (subscription vs. free) is not a distinguishing factor between published App Directory apps and distributed apps.

NEW QUESTION # 73

.....

Salesforce certification will be a qualification assess standard for experienced workers, it is also a breakthrough for some workers who are in bottleneck. Slack-Dev-201 new test camp materials are a good helper. For most IT workers it also increases career chances. For companies one certification increases strong competitive power. Slack-Dev-201 New Test Camp materials will make you stand out from peers in this field applicable in all over the world.
