Professional Salesforce - Pdf B2C-Commerce-Architect Version

If you want to pass your exam and get your certification, we can make sure that our B2C-Commerce-Architect guide questions will be your ideal choice. Our company will provide you with professional team, high quality service and reasonable price. In order to help customers solve problems, our company always insist on putting them first and providing valued service. We are living in the highly competitive world now. We have no choice but improve our soft power, such as get B2C-Commerce-Architect Certification. It is of great significance to have B2C-Commerce-Architect guide torrents to pass exams as well as highlight your resume, thus helping you achieve success in your workplace.

To become a Salesforce Certified B2C Commerce Architect, candidates must pass a rigorous exam that tests their knowledge of B2C Commerce Cloud and their ability to design and implement complex commerce solutions. B2C-Commerce-Architect Exam consists of 60 multiple-choice questions and lasts for 105 minutes. Candidates must achieve a minimum score of 65% to pass the exam and earn the certification.

Salesforce Certified B2C Commerce Architect Sample Questions (Q27-Q32):

NEW QUESTION # 27

The Client wants to have a flashsale on a few products every day. These products are sold through B2C Commerce as well as an in

store Point of Sale system that it tied to the same inventory.

An Architect analyzes the following proposed solution:

Inventory feed will continue to run daily but add a web-service call to compare and update B2C Commerce inventory in real time during checkout after a flash product's inventory reaches a threshold.

Which two risks should the Architect communicate to the Client about this solution?

Choose 2 answers

- A. The default rate limiter configuration for the web-service could cause the web-service to return an exception during high traffic.
- B. If the external hosted web-service is unreliable, it could be a point of failure in the site's order placement flow.
- C. Because the job would still be configured to run daily there will be a degrade in performance during non-flash sales periods
- D. If the product Inventory threshold that triggers the web service calls is reached too often. It will have a negative Impact on site performance.

Answer: A,B

Explanation:

The risks associated with the proposed real-time inventory update solution during flash sales are:

Option A (The default rate limiter configuration for the web-service could cause the web-service to return an exception during high traffic): This is a critical risk because high traffic during flash sales could exceed the rate limits set for the web-service, leading to exceptions and potentially failing to update inventory in real-time.

Option B (If the external hosted web-service is unreliable, it could be a point of failure in the site's order placement flow): Reliance on an external web-service for crucial operations like inventory updates introduces a risk of downtime or performance issues if the service is unreliable, directly impacting the ability to complete orders during peak sales periods.

Both risks could severely disrupt operations during critical sales events, suggesting a need for robust contingency plans and potentially reevaluating the solution architecture to ensure reliability.

NEW QUESTION # 28

An Architect to notify by the Business that order conversion dramatically dropped a few hours after go live. Further investigation points out that customers cannot proceed to checkout anymore. The Architect is aware that a custom inventory checks with a third-party API is enforced at the beginning of checkout, and that customers are redirected to the basket page when items are no longer in stock. Which tool can clearly confirm that the problem is indeed caused by the inventory check?

- A. Realtime Report from Reports and Dashboards
- B. Sales Dashboard from Reports and Dashboards
- C. Service Status from Business Manager
- D. Pipeline Profiler from Business Manager

Answer: D

Explanation:

The appropriate tool to verify that the problem is indeed caused by the inventory check at the beginning of checkout is the Pipeline Profiler in Business Manager. This tool allows an architect to analyze the performance of specific code execution paths, including those involving third-party API calls. It helps identify bottlenecks and inefficiencies in the pipeline execution, particularly useful in situations where custom code like inventory checks may impact site functionality. The use of the Pipeline Profiler would enable the architect to pinpoint if the custom inventory check is causing the checkout process to fail or redirect users inappropriately.

NEW QUESTION # 29

During code review, the Architect found that there is a service call on every visit of the product detail page (PDP).

What best practices should the Architect ensure are followed for the service configuration?

Choose 2 answers

- A. Service logging is disabled.
- B. Circuit breaker is enabled.
- C. Service mock up call is configured.
- D. Service timeout is set.

Answer: C

Explanation:

For logging practices in a complex LINK cartridge integration, the recommendation is:

Get logger for cartridge-specific category (C): This practice allows for more precise and relevant logging by focusing on the specific cartridge, making troubleshooting more efficient.

Report debug level message for the back-end asynchronous communication: This ensures that all detailed interactions are logged, providing valuable data for diagnosing issues.

Report all errors at error level message: This categorizes all critical issues under error logs, which is essential for quick identification and resolution of problems affecting the system's operations.

This structured logging strategy enhances the ability to monitor and troubleshoot the system effectively, especially in complex integrations where multiple components interact asynchronously.

NEW QUESTION # 30

During load testing, a third party service is constantly failing to respond in a timely manner on the Product Listing Page. The page is not affected as it is collecting data with the server side call, however the loading time is increasing.

Which two recommendations should the developer take in order to minimize the risk and improve the loading time?

Choose 2 answers

- A. Ask the third party to improve the reliability of the service.
- **B. Load the data asynchronously after the page is loaded**
- C. Decrease the service timeout.
- D. Remove the service.
- **E. Enable the Circuit Breaker.**

Answer: B,E

NEW QUESTION # 31

A company wants to add Salesforce Order Management to their existing B2C Commerce, Service Cloud, and Sales Cloud integration. Their current sales process lets sales reps build quotes, create orders, and process reduction orders for refunds as part of their sales channel workflow. Their B2C Commerce order objects also include multiple custom attributes that the merchant's current Order Management System uses to allocate orders to the correct distribution center for fulfillment.

When enabling Salesforce Order Management, what potential concerns will the merchant need to work through?

- A. Salesforce Order Management does not allow for fulfillment rules across multiple distribution centers without the use of an AppExchange package or custom Apex triggers.
- B. Custom attributes on B2C Commerce Orders are not natively supported for Salesforce Order Management integrations and require custom Apex development to handle mapping.
- C. Reduction Orders and Order Management change orders conflict if both are enabled in the same Org and require the use of Record Types and Apex Triggers or Validation Rules to avoid conflicts.
- **D. Salesforce Order Management integrates natively with B2B Commerce when both products reside within the same Org but requires the use of a customizable B2C Commerce cartridge to import data from a B2C Commerce instance.**

Answer: D
